

IndigoCare

NETRIX certified with OmniPCX Enterprise™

Netrix is a powerful message server, designed for efficient notification and message management in healthcare facilities and industry, with seamless integration and optimal performance.

Integration Overview:

Central Notification Gateway for room- and alarm calls.

Its distributed architecture ensures the highest degree of flexibility without any limitation. Because of its flexible topology iCall can be implemented in new constructions or renovations, using existing cable infrastructure. All types of call units can be combined into a single system: Wired or wireless, monitored or standard. Any existing call system can be extended with iCall. Furthermore, any type of alarm system, fire alarm installation and communication system can be fully integrated.

Integration Details:

The IP-based Netrix message server is designed specifically to bundle and pass alarms from any kind of alarm- or nurse call system towards Alcatel-Lucent Enterprise's extensions and to any GSM and other receivers.

Different types of alarms can be handled: alarms coming from IndigoCare's Full-IP Nurse call system (iCall), other vendors' nurse call systems, fire detection systems and any kind of alarm system using ESPA 4.4.4.-protocol, any RS232 input, or IP-input messages. By using coupler heads, dry alarm contacts can be connected to the Netrix.

Company Overview:

Essec Group, the mother company of IndigoCare International, has been a system integrator of nurse call, notification systems and telecom since 1977. Its first own development in 1998 was the Netrix Notification gateway, integrating all nurse call and alarm systems towards paging-, mobile-, and dect-handsets. Netrix is in today's version one of the most flexible notification systems available on the market. IndigoCare has always moved ahead in new applications to improve staff efficiency.

CAUTION: This validation provides customers with confidence that a partner's integration with an Alcatel-Lucent Enterprise on-premises platform is functionally sound and performs as designed. This can help customers reduce deployment risk, lower total cost of ownership, and improve the user experience related to the partner's integrated offering.

However, be aware, this document is associated with an InterWorking Report (IWR) available on the ALE Business Portal which give all possible restrictions and limits.
