

NEW BRIDGES B.V.

Nerve Centre certified with OmniPCX Enterprise™

Nerve Centre is the highly flexible Emergency Notification System developed and offered by New Bridges. Its main goal is to alert a large number of recipients in cases of emergency.

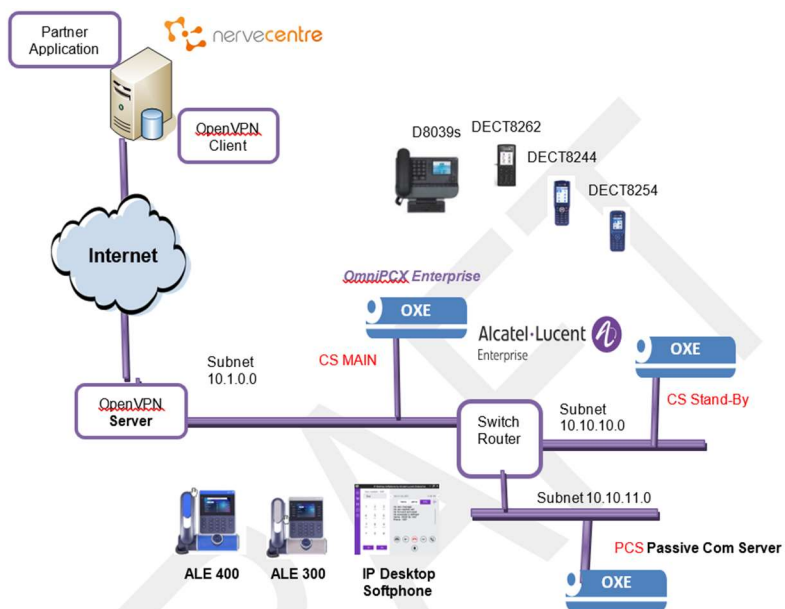

Nerve Centre supports numerous interfaces to external equipment which enable Nerve Centre to act on triggers and notify recipients in a way that fits the customer's needs best. An example of the possibilities is illustrated by the diagram below.

Although Nerve Centre is mainly available as a cloud solution, hybrid-cloud and on-premises-only setups are supported as well.

Other New Bridges applications build on Nerve Centre technology are Reachability Services and a lone-worker-protect solution called NC-Protect Guard.

Integration Overview:

Alcatel's COMMS-Paging interface leverages Nerve Centre to integrates with Alcatel's OmniPCX Enterprise (OXE) and send messages to DECT handsets and desk phones. The hybrid-cloud solution uses a Nerve Centre appliance as a bridge to make the OXE's messaging capabilities available to the Nerve Centre cloud solution. On-premises Nerve Centre setups don't need an appliance; these are capable of interfacing to the OXE directly.

Integration Details:

For Nerve Centre to send messages to Alcatel handsets and desk phones that support messaging, a customer needs to acquire a Nerve Centre appliance that implements Alcatel's COMMS-Paging interface. As depicted on the topside of the following diagram, the appliance resides at the customer's premises to be able to connect to the OXE over local LAN. At the same time, the appliance needs to connect to the Nerve Centre cloud solution over internet, to offer Nerve Centre a channel for sending messages to the OXE. This connection is secured and encrypted by https. Authentication is required before Nerve Centre accepts the connection.

CAUTION: This validation provides customers with confidence that a partner's integration with an Alcatel-Lucent Enterprise on-premises platform is functionally sound and performs as designed. This can help customers reduce deployment risk, lower total cost of ownership, and improve the user experience related to the partner's integrated offering. However, be aware, this document is associated with an InterWorking Report (IWR) available on the ALE Business Portal which give all possible restrictions and limits.
