OmniAccess 610 Series Wi-Fi 6E Campus Access Points

Fast, resilient, and secure Wi-Fi 6E connectivity in a compact and affordable platform

For enterprises who need more wireless capacity and/or wider channels, OmniAccess 610 Series Campus APs are designed to take advantage of the newly available 6 GHz spectrum using a unique dual-radio/tri-band architecture. Adding support for the 6 GHz band to the traditional 2.4 GHz and 5 GHz bands more than doubles the available wireless capacity in a wireless network – so you can meet growing demand due to bandwidth-hungry video, increasing numbers of client and IoT devices, and growth in cloud.

Unique to OmniAccess, the 610 Series features two radios that can be tuned to any two of the three available spectrum bands for Wi-Fi (2.4 GHz, 5 GHz, 6 GHz). This flexibility provides a cost-effective and compact platform that delivers full tri-band coverage as part of a multi-AP deployment and can be used with software that will intelligently and flexibly configure the radios of each of these dual-radio APs.

More capacity and wider channels
The OmniAccess 610 Series APs are designed to take advantage of Wi-Fi 6E and the 6 GHz band, which translates into far greater speeds, wider channels for multi-gigabit traffic, and less interference. Its two 2x2 MIMO radios deliver a combined peak data rate of up to 3.6 Gbps when configured for concurrent 5 GHz and 6 GHz operation.

Key features
- Unlocks the 6 GHz band to more than double the available capacity in wireless networks
- Comprehensive dual radio/tri-band coverage across 2.4 GHz, 5 GHz, and 6 GHz to deliver up to 3.6 Gbps combined peak data rate¹
- Compact and low power consumption – virtually unrestricted operation from an 802.3af (class 3) PoE source²
- Up to seven 160 MHz channels in 6 GHz to support low-latency, bandwidth-hungry applications like high-definition video, and augmented reality/virtual reality applications
- 2.5 Gbps Smart Rate Ethernet port to minimize wired bottlenecks
- Built-in GPS receivers and fine time measurement (802.11mc) to enable APs to automatically locate themselves and serve as reference points for accurate indoor location measurements

¹ When configured for 5 GHz + 6 GHz operation
² By default (with IPM disabled) the AP-615 will disable the USB port and limit the speed of the Ethernet port to 1Gbps when on class 3 POE. The Intelligent Power Monitoring feature can be used to avoid these restrictions.

Datasheet
OmniAccess 610 Series Wi-Fi 6E Campus Access Points
Advantages of 6 GHz
Wi-Fi 6E provides up to 1200 MHz of additional unlicensed spectrum in the 6 GHz band for higher throughput and improved application performance. With up to seven 160 MHz channels, Wi-Fi 6E can better support low-latency, bandwidth hungry applications like high-definition video and augmented reality/virtual reality applications. Only Wi-Fi 6E capable devices can use the 6 GHz band so there is no interference or slowdowns due to legacy devices.

Device class support
The OmniAccess 610 Series APs are part of the low power indoor (LPI) device class. This fixed indoor-only class uses lower power levels and does not require an Automated Frequency Coordination service (AFC) to manage incumbent outdoor services, which is required for standard class APs.

Global readiness
While the need for more Wi-Fi capacity is recognized across the globe, countries are approaching the 6 GHz band differently. The 610 Series APs are set up to automatically update regulatory rules once Wi-Fi 6E regulations have been approved and certified.

Extend the benefits of Wi-Fi 6
The OmniAccess 610 Series APs are based on the 802.11ax (Wi-Fi 6) standard, which means that all its efficiency and security enhancements are also available on the 6 GHz band. Wi-Fi 6 features such as Orthogonal Frequency Division Multiple Access (OFDMA), BSS coloring etc. are fully supported on the OmniAccess Wi-Fi 6E access points as well.

Advantages of OFDMA
The OmniAccess 610 Series is equipped with OFDMA to handle multiple 802.11ax capable clients on each channel simultaneously, regardless of device or traffic type. Channel utilization is optimized by handling each transaction via smaller sub-carriers or resource units (RUs), which means that clients are sharing a channel and not competing for airtime and bandwidth.

Wi-fi Optimization
Client optimization
OmniAccess’s patented AI-powered technology eliminates sticky client issues by steering a client to the AP where it receives the best radio signal. ClientMatch steers traffic from the noisy 2.4 GHz band to the preferred 5 GHz or 6 GHz band depending on client capabilities and AP settings. ClientMatch also dynamically steers traffic to load balance APs to improve the user experience.

Automated Wi-Fi radio frequency management
To optimize the user experience and provide greater stability, OmniAccess AirMatch allows organizations to automate network optimization using machine learning.

AirMatch provides dynamic bandwidth adjustments to support changing device density, enhanced roaming using an even distribution of Effective Isotropic Radiated Power (EIRP) to radios, and real-time channel assignments to mitigate co-channel interference.

AirMatch also ensures that the two radios of OmniAccess 610 Series Access Points are automatically configured in the most effective and efficient way to deliver full tri-band coverage.

Application Assurance
With OmniAccess Air Slice, organizations can provide application assurance to their users that goes beyond the traditional capabilities of airtime fairness. After the SLAs are configured, Air Slice monitors network usage, automatically allocates radio resources, and dynamically adjusts radio resources as new users connect and applications sessions begin or end.

OmniAccess Advanced Cellular Coexistence (ACC)
Unique to OmniAccess, Advanced Cellular Coexistence uses built-in filtering to automatically minimize the impact of interference from cellular networks, distributed antenna systems (DAS), and commercial small cell or femtocell equipment.

Intelligent Power Monitoring (IPM)
For better insights into energy consumption, OmniAccess APs continuously monitor and report hardware energy usage. Unlike other vendor’s access points, OmniAccess APs can also be configured to enable or disable capabilities based on available PoE power – ideal when wired switches have exhausted their power budget. Enterprises can deploy Wi-Fi 6E APs and update switching and power at a later if needed based on their actual usage.

Self-Location APs
Indoor location shouldn’t require guesswork or costly overlay technologies. OmniAccess’s Wi-Fi 6 and 6E APs help organizations leverage their wireless investment to deliver indoor location anywhere.

OmniAccess 610 Series Campus APs include built-in GPS receivers and intelligent software to allow
them to automatically locate themselves accurately within the universal framework of latitude and longitude. As part of OmniAccess’s indoor location services solution, they serve as reference points for client devices using fine time measurements (802.11mc) and other location technologies.

In addition, OmniAccess’s Wi-Fi 6 and 6E APs support Open Locate, an emerging standard that allows APs to share their location over the air and through cloud-based APIs, enabling mobile devices to locate themselves and applications to support network analytics.

**APs as an IoT transport platform**
The OmniAccess 610 Series includes an integrated Bluetooth 5 and 802.15.4 radio for Zigbee support to simplify deploying and managing IoT-based location services, asset tracking services, security solutions, and IoT sensors. There is also a USB-port extension to provide IoT connectivity to a wider range of devices. These IoT capabilities allows organizations to leverage OmniAccess APs as an IoT transport platform, which eliminates the need for an overlay infrastructure and additional IT resources and can accelerate IoT initiatives.

In addition, Target Wake Time (TWT), part of the 802.11ax standard, establishes a schedule for when clients need to communicate with an AP. This helps improve client power savings and reduces airtime contention with other clients, which is ideal for IoT.

**OmniAccess secure infrastructure**
The OmniAccess 610 Series includes build-security capabilities such as:

- **WPA3 and Enhanced Open**
  Support for stronger encryption and authentication is provided via the latest version of WPA for enterprise-protected networks. Enhanced Open offers seamless new protection for users connecting to open networks where each session is automatically encrypted to protect user passwords and data on guest networks.

- **WPA2-MPSK**
  MPSK enables simpler passkey management for WPA2 devices – should the Wi-Fi password on one device or device type change, no additional changes are needed for other devices. This capability requires OmniAccess ClearPass Policy Manager.

- **Simple and secure access**
  To improve security and ease of management, IT can centrally configure and automatically enforce role-based policies that define proper access privileges for employees, guests, contractors, and other user groups – no matter where users connect on wired and WLANs.

- **Seamless handoffs to cellular**
  Built on the technical foundations of Passpoint® and Wi-Fi Calling, OmniAccess Air Pass creates a roaming network across the Alcatel-Lucent Enterprise customer footprint, extending cellular coverage and enhancing the visitor and subscriber experience to deliver a great experience for your guests while reducing costs and management overhead for DAS.

- **Flexible operation and management**
  Our APs can operate as standalone access points or with a gateway for greater scalability, security, and manageability. APs can be deployed using zero touch provisioning – without on-site technical expertise – for ease of implementation in branch offices and for remote work. OmniAccess APs can be managed using cloud-based or on-premises solutions for any campus, branch, or remote work environment. As the management and orchestration console for OmniAccess ESP (Edge Services Platform), OmniAccess Central provides a single pane of glass for overseeing every aspect of wired and wireless LANs, WANs, and VPNs. AI-powered analytics, end-to-end orchestration and automation, and advanced security features are built natively into the solution.

**Summary**
OmniAccess 610 Series Access Points are designed to take advantage of the 6 GHz band using two radios that can deliver comprehensive tri-band coverage in a multi-AP environment and better meet the growing demands of Wi-Fi due to increased use of video, growth in client and IoT devices, and expanded use of cloud.

With a 3.6 Gbps combined peak data rate for higher throughput and faster speeds for indoor use, the OmniAccess 610 Series delivers a cost-effective enterprise Wi-Fi 6E solution with increased capacity, wider channels, reduced power consumption.
Specifications

Hardware variants
AP-615: Internal antenna models

Wi-Fi radio specifications
• AP type: Indoor, dual-radio/tri-band 2.4GHz, 5GHz and 6GHz (dual concurrent) 802.11ax 2x2 MIMO
• 2.4GHz radio: Two spatial stream Single User (SU) MIMO for up to 574Mbps wireless data rate with 2SS HE40 802.11ax client devices (287Mbps for HE20)
• 5GHz radio: Two spatial stream Single User (SU) MIMO for up to 1.2Gbps wireless data rate with 2SS HE80 802.11ax client devices
• 6GHz radio: Two spatial stream Single User (SU) MIMO for up to 2.4Gbps wireless data rate with 2SS HE160 802.11ax client devices
• Up to 512 associated client devices per radio, and up to 16 BSSIDs per radio (limited to 4 for the 6GHz radio)
• Supported modulation types:
  • 802.11ac: BPSK, QPSK, 16-QAM, 64-QAM, 256-QAM and 1024-QAM (proprietary extension)
  • 802.11ax: BPSK, QPSK, 16-QAM, 64-QAM, 256-QAM and 1024-QAM
• 802.11n high-throughput (HT) support: HT20/40
• 802.11ac very high throughput (VHT) support: VHT20/40/80
• 802.11ax high efficiency (HE) support: HE20/40/80/160

Supported frequency bands (country-specific restrictions apply):
- 2.400 to 2.4835GHz
- 5.150 to 5.250GHz
- 5.250 to 5.350GHz
- 5.470 to 5.725GHz
- 5.725 to 5.850GHz
- 5.850 to 5.955GHz
- 5.925 to 6.25GHz
- 6.425 to 6.525GHz
- 6.525 to 6.875GHz
- 6.875 to 7.125GHz

- U-NII-1
- U-NII-2A
- U-NII-3/ISM
- U-NII-4
- U-NII-5
- U-NII-6
- U-NII-7
- U-NII-8
- ISM

- 802.11a/g/n/ac: Orthogonal frequency-division multiplexing (OFDM)
- 802.11a: Orthogonal frequency-division multiple access (OFDMA) with up to 8 resource units

- 802.11b: Direct-sequence spread-spectrum (DSSS)
- 802.11a/g/n/ac: Orthogonal frequency-division multiplexing (OFDM)
- 802.11ax: Orthogonal frequency-division multiple access (OFDMA) with up to 8 resource units

- 802.11b: BPSK, QPSK, CCK
- 802.11a/g/n: BPSK, QPSK, 16-QAM, 64-QAM and 256-QAM (proprietary extension)

- 802.11ax Target Wait Time (TWI) to support low-power client devices

- 802.11mc Fine Timing Measurement (FTM) for precision distance ranging Wi-Fi antennas

- AP-615: Integrated downtilt omni-directional antennas for 2x2 MIMO with peak antenna gain of 2.8dBi in 2.4GHz, 4.5dB in 5GHz and 4.5dB in 6GHz. Built-in antennas are optimized for horizontal ceiling mounted orientation of the AP. The downtilt angle for maximum gain is roughly 30 to 40 degrees.

Combining the patterns of each of the antennas of the MIMO radios, the peak gain of the combined, average pattern is 2.0dBi in 2.4GHz, 3.5dBi in 5GHz and 3.4dB in 6GHz.

Other interfaces and features
• E0: Ethernet wired network ports (RJ-45)
  • Auto-sensing link speed (100/1000/2500BASE-T) and MDI/MDX
  • 2.5Gbps speed complies with NBase-T and 802.3bz specifications
  • POE-PD: 48Vdc (nominal) 802.3af/at POE (class 3 or higher)
  • 802.3az Energy Efficient Ethernet (EEE)
  • DC power interface: 12Vdc (nominal, +/- 5%), accepts 2.1mm/5.5mm center-positive circular plug with 9.5mm length plastic sleeve
  • USB 2.0 host interface (Type A connector)
  • Capable of sourcing up to 1A / 5W to an attached device
  • Bluetooth Low Energy (BLE5.0) and Zigbee (802.15.4) radio
  • BLE: up to 5dBm transmit power (class 1) and -100dBm receive sensitivity (125kbps)
  • Zigbee: up to 5dBm transmit power and -97dBm receive sensitivity (250kbps)
  • Integrated omnidirectional antenna with roughly 30 to 40 degrees downtilt and peak gain of 2.6dBi
  • GNSS L1 (1575.42MHz) receiver supporting GPS, Galileo, GLONASS and BeiDou signals
  • Receive sensitivity: -162dBm (tracking)
  • Integrated omnidirectional antenna with roughly 30 to 40 degrees downtilt and peak gain of 2.3dBi
  • Advanced IOT Coexistence (AIC) allows concurrent operation of multiple radios in the 2.4GHz band
  • Built-in Trusted Platform Module (TPM) for enhanced security and anti-counterfeiting

Datasheet
OmniAccess 610 Series Wi-Fi 6E Campus Access Points
• Visual indicators (four multi-color LEDs): for System (1x) and Radio (3x) status
• Reset button: factory reset, LED mode control (normal/off)
• Serial console interface (proprietary, micro-B USB physical jack)
• Kensington security slot
• Automatic thermal shutdown and recovery function

Power sources and power consumption
• The AP supports direct DC power and Power over Ethernet (POE) on port E0
• When both DC and POE power sources are available, DC power takes priority over POE
• Power sources are sold separately; see the 610 Series Ordering Guide for details
• When powered by DC or 802.3at (class 4) POE, the AP will operate without restrictions.
• When powered by 802.3af (class 3) POE with the IPM feature disabled, the AP will disable the USB port.
• With IPM enabled, the AP will start up in unrestricted mode but may dynamically apply restrictions depending on the available power budget and actual consumption. The feature restrictions and order in which these get applied are configurable.
• Maximum (worst-case) power consumption (without / with a USB device attached):
  ¬ DC powered: 12.5W/18.2W.
  ¬ POE powered: 14.7W/20.9W.
  ¬ This assumes that up to 5W is supplied to the attachable USB device.
• Maximum (worst-case) power consumption in idle mode: 5.6W/11.0W (DC) or 6.9W/12.9W (POE).
• Maximum (worst-case) power consumption in deep-sleep mode: 1.0W (DC) or 1.8W (POE).

POE operating modes and default restrictions with IPM disabled

Mounting details
A mounting bracket has been pre-installed on the back of the AP. This bracket is used to secure the AP to any of the mount kits (sold separately); see the 610 Series Ordering Guide for details.

Environmental specifications
• Operating conditions
  ¬ Temperature: 0°C to +50°C / +32°F to +122°F
  ¬ Relative humidity: 5% to 95%
  ¬ ETS 300 019 class 3.2 environments
  ¬ AP is plenum rated for use in air-handling spaces
• Storage conditions
  ¬ Temperature: -25°C to +55°C / -13°F to +131°F
  ¬ Relative humidity: 10% to 100%
  ¬ ETS 300 019 class 1.2 environments
• Transportation conditions
  ¬ Temperature: -40°C to +70°C / -40°F to +158°F
  ¬ Relative humidity: up to 95%
  ¬ ETS 300 019 class 2.3 environments

Reliability
Mean Time Between Failure (MTBF): 540khrs (62yrs) at +25°C operating temperature.

Regulatory compliance
• FCC/ISED
• CE Marked
• RED Directive 2014/53/EU
• EMC Directive 2014/30/EU
• Low Voltage Directive 2014/35/EU
• UL/IEC/EN 60950
• IEC/EN 62368-1
• EN 60601-1-1, EN60601-1-2
For more country-specific regulatory information and approvals, please see your OmniAccess representative.

Regulatory model numbers
• AP-615 (all models): APIN0615

Certifications
• UL2043 plenum rating
• Wi-Fi Alliance (WFA):
  ¬ Wi-Fi CERTIFIED a, b, g, n, ac
  ¬ Wi-Fi CERTIFIED 6E (ax, 6GHz)
  ¬ WPA, WPA2 and WPA3 – Enterprise with CNSA option, Personal (SAE), Enhanced Open (OWE)
  ¬ WMM, WMM-PS, Wi-Fi Vantage, W-Fi Agile Multiband
  ¬ Passpoint (release 2)
  ¬ Wi-Fi Location
• Bluetooth SIG
• Ethernet Alliance (POE, PD device, class 4)
