### Power supplies

OmniSwitch 6865 supports 1+1 redundant, hot-swappable fan-less power supplies. It also supports power load-sharing between the primary and backup power supplies to provide extended PoE budgets. There is no interruption of service when a new power supply is installed or an existing one replaced. The power supplies can be installed directly at the back of the switch or can be connected with a cable (included) and mounted independently using a Power tray. In a redundant configuration, power supplies can be installed in any manner AC+AC, AC+DC or DC+DC.
