The Alcatel-Lucent OmniSwitch® 6900 Stackable LAN and data center switches are compact, high-density 10 Gb Ethernet (GigE), 25 GigE, 40 GigE and 100 GigE platforms. In addition to high performance and extremely low latency, they offer Virtual Extensible LAN (VXLAN), OpenFlow, Shortest Path Bridging (SPB), and data center bridging (DCB) capabilities, QoS, Layer-2 and Layer-3 switching, as well as system and network level resiliency. They are designed for the most demanding software-defined operations in virtualized or physical networks and converged data centers.

With their modular approach, the OmniSwitch 6900s support lossless configurations and native Fibre Channel (FC) ports for high-speed storage I/O consolidation. They can be positioned as converged top-of-rack or spine switches in data center environments, or as core and aggregation devices in campus networks.

The OmniSwitch 6900 product family offers a broad range of 1/10 GigE, 25 GigE, 40 GigE and 100 GigE ports in a 1-RU form factor. The switches offer the highest 10 GigE port density in their class, with up to 104 x 10 GigE ports, up to 32 x 40 GigE and up to 24 x 2/4/8 Gigabit Fibre Channel (GFC) ports in a 1RU form factor. The OmniSwitch 6900 switches also offer up to 72 x 25 GigE and 32 x 100 GigE ports in a 1RU form. Their modularity also allows for many combinations to address any to any switching between Ethernet, Converged Ethernet and FC ports. The OmniSwitch 6900 product family leverages an energy-efficient model with leading low power consumption, making them the most efficient and versatile switches in their class.
### Features

- Wire-rate non-blocking switching and routing performance for Ethernet at 100 Gige, 40 Gige, 25 Gige, 10 GigE/1 GigE and 10Base-T speeds and for FC at 2/4/8 GFC.
- High port density in 1RU.
- Up to 3x 40 GigE or 12x 8 GFC ports for OmniSwitch 6900-V72
- Up to 128 SFP28 or 32 QSFP28 ports for OmniSwitch 6900-T40
- Up to 64 SFP+/FCoE ports for OmniSwitch 6900-C32
- Up to 72 SFP28 or 32 QSFP28 ports for OmniSwitch 6900-V72
- Up to 104 Small Form-factor Pluggable (SFP+)
- Up to 28 10GBase-T/FCoE ports for OmniSwitch 6900-X20
- Up to 3x 40 GigE or 12x 8 GFC ports for OmniSwitch 6900-X20/T20
- Up to 32 SFP+/FCoE ports for OmniSwitch 6900-X20
- Up to 56 10GBase-T/FCoE ports for OmniSwitch 6900-T40
- Up to 64 SFP+/FCoE ports for OmniSwitch 6900-X40
- Up to 6x 40 GigE or 24x 8GFC ports for OmniSwitch 6900-X40/T40
- Resilient hardware system architecture.
- Modular slots offer versatility in terms of 100 GigE, 40 GigE, 25 GigE, 1/10 GigE, 10G base-T and FC ports.
- Supports next-generation service with a very high port density in a 1RU form factor.
- Front-to-back and back-to-front cooling options provide lower power consumption per 10 GigE port in its class.
- Internal, hot-swappable power supplies and fans.
- Hardware virtual routing and forwarding (VRF) support for VRF-lite and IP Virtual Private Network (IP VPN).
- Scalable network virtualization architecture with guaranteed SLA delivery over standard Ethernet fabric: auto-Fabric IP routing for routed backbone and access provisioning, SPB for bridging and routed services, Edge Virtual Bridging (EVB), Multiple VLAN Registration Protocol (MVRP) and dynamic Virtual Network Profiles (VPN).
- Zero-touch provisioning and network automation with out-of-the-box plug-and-play Auto-Fabric for automatic protocol and topology discovery. Protocol auto-discovery and self-provisioning works with any Ethernet device that supports standard IEEE protocols, such as 802.1aq (Shortest Path Bridging-MAC, SPBM), 802.1ak (MVRP), or 802.3ad/802.1AX (Link Aggregation Control Protocol, LACP). Auto-fabric operation extends to IP routing protocol provisioning and IP on-boarding.
- The switch architecture simplifies the deployment of converged storage for FC, Fibre Channel over Ethernet (FCoE), Internet Small Computer System Interface (iSCSI) and Network-Attached Storage (NAS) systems.
- Embedded Software-defined networking (SDN) integration of innovative applications through RESTful northbound APIs for automation and integration of innovative applications.
- Ensures efficient power management, thereby reducing operating expenses and lowering total cost of ownership.
- Out-of-the-box flexible fabric architecture designed to automate and simplify the end-to-end deployment of campus, data center, and cloud-based services.
- Prevent human mistakes by automating standardized and replicable configurations.
- Prevents host address explosion and flooding with built-in SLA service support at low capital and operating costs and based on interoperable proven standards.
- Optimizes/simplifies Layer 2 and Layer 3 network designs and reduces administration overhead while increasing network capacity with resilient multipath active-active dual homing multi-chassis support.
- Out-of-the-box auto-fabric to simplify installation and service provisioning.
- Automated Cloud Multi-Tenancy support through vNP.
- Out-of-the-box auto-fabric to simplify installation and service provisioning.
- Out-of-the-box auto-fabric to simplify installation and service provisioning.
- Out-of-the-box auto-fabric to simplify installation and service provisioning.
- Out-of-the-box auto-fabric to simplify installation and service provisioning.
- Out-of-the-box auto-fabric to simplify installation and service provisioning.
- Out-of-the-box auto-fabric to simplify installation and service provisioning.
- Native and overlay Cloud Multi-tenancy support.
- Prevent human mistakes by automating standardized and replicable configurations.
- Prevents host address explosion and flooding with built-in SLA service support at low capital and operating costs and based on interoperable proven standards.
- Optimizes/simplifies Layer 2 and Layer 3 network designs and reduces administration overhead while increasing network capacity with resilient multipath active-active dual homing multi-chassis support.
- Out-of-the-box auto-fabric to simplify installation and service provisioning.
- Automated Cloud Multi-Tenancy support through vNP.

### Benefits

- Up to 6.4 Tbps of wire-rate capacity, sub-microsecond latency for high-performance server clusters and core connectivity over QSFP, SFP+, DAC or CAT 5/6.
- OS6900-V72 provides 3.6 Tbps of wire-rate switching capacity.
- OS6900-C32 provides 6.4 Tbps of wire-rate switching capacity.
- On OS6900-V72, the SFP28 ports can operate at 25G or 10G speeds.
- On OS6900-C32 and OS6900-V72, the QSFP28 ports can operate at 100G/40G/4x25G/4x10G speeds.
- Outstanding performance when supporting real-time voice, data, storage and video applications for converged scalable networks.
- Supports next-generation service with a very high port density in a 1RU form factor.
- Modular slots offer versatility in terms of 100 GigE, 40 GigE, 25 GigE, 1/10 GigE, 10G base-T and FC ports.
- Supports next-generation service with a very high port density in a 1RU form factor.
- Ensures efficient power management, thereby reducing operating expenses and lowering total cost of ownership.
- Out-of-the-box flexible fabric architecture designed to automate and simplify the end-to-end deployment of campus, data center, and cloud-based services.
- Prevent human mistakes by automating standardized and replicable configurations.
- Prevents host address explosion and flooding with built-in SLA service support at low capital and operating costs and based on interoperable proven standards.
- Optimizes/simplifies Layer 2 and Layer 3 network designs and reduces administration overhead while increasing network capacity with resilient multipath active-active dual homing multi-chassis support.
- Out-of-the-box auto-fabric to simplify installation and service provisioning.
- Automated Cloud Multi-Tenancy support through vNP.

Alcatel-Lucent OmniSwitch 6900 models

The Alcatel-Lucent OmniSwitch 6900 family offers high-performance and very low-latency Layer 2/Layer 3 10/40 GigE switches. All models are 1RU form factor with redundant power supplies and fan trays for front-to-back and back-to-front airflow. A wide range of Ethernet and Fibre Channel interfaces are supported. Available interfaces include 100 GigE, 40 GigE, 25 GigE, 1/10 GigE, 1/10GBase-T, 100Base-T, and 2/4/8 GigFC in the base switch or using optional modules.

- The OmniSwitch 6900-V72 has 48 10/25 GigE SFP28 ports and six QSFP28 ports that operate at 100 GigE or 4x25 GigE or 40 GigE or 4x10 GigE. Maximum 25G port density is 72 ports.
- OmniSwitch 6900-C32 has 32 fixed QSFP28 ports in the front panel. The ports can operate at 100 GigE or 40 GigE. They can also operate as 4x25 GigE or 4x10 GigE using splitter cables. Maximum 25G port density is 128 ports.
- The OmniSwitch 6900-X72 has 48 1/10 GigE SFP+ ports auto-negotiable 1/10 GigE and six 40 GigE QSFP ports that operate at 40 GigE or 4x10 GigE. Maximum 10G port density is 72 10G ports.
- OmniSwitch 6900-T40 has 40 fixed 10 GBase-T ports auto-negotiable 100Base-T, 1/10 GigE and two expansion slots, one on the front panel and one on the back of the device.
- OmniSwitch 6900-T20 has 20 fixed 10 GBase-T ports auto-negotiable 100Base-T, 1/10 GigE and one expansion slot on the front panel.
- OmniSwitch 6900-X40 has 40 fixed SFP+ ports 1/10 GigE depending on transceiver and two expansion slots, one on the front panel and one on the back of the device.
- OmniSwitch 6900-X20 has 20 fixed SFP+ ports 1/10 GigE depending on transceiver and one expansion slot on the front panel.

Detailed product features

Simplified manageability
- Fully programmable RESTful web services interface with XML and JSON support. The API enables access to Command Line Interface (CLI) and individual management information base (MIB) objects.
- Intuitive Alcatel-Lucent Enterprise CLI in a scriptable Python and Bash environment through console, Telnet or Secure Shell (SSH) v2 over IPv4/IPv6
- Powerful Alcatel-Lucent Enterprise WebView Graphical Web Interface through HTTP and HTTPS over IPv4/IPv6
- Full configuration and reporting using Simple Network Management Protocol (SNMP) v1/2/3 to facilitate third-party network management over IPv4/IPv6
- File upload using USB, Trivial File Transfer Protocol (TFTP), FTP, SFTP or secure copy (SCP) over IPv4/IPv6
- Multiple microcode image support with fallback recovery
- Local (on the flash) and remote server logging (Syslog) for events and commands
- Loopback IP address support for management-per-service
- Management VRF support
- Policy- and port-based mirroring
- Remote port mirroring
- sFlow v5 and Remote Network Monitoring (RMON)
- Unidirectional Link Detection (UDLD) and Digital Diagnostic Monitoring (DDM)
- Dynamic Host Configuration Protocol (DHCP) relay
- IEEE 802.1AB LLDP with MED extensions
- Network Time Protocol (NTP)
- DHCPv4 and DHCPv6 server managed by Nokia VitalQIP® DNS/DHCP IP Management Software
- Virtual Router Redundancy Protocol (VRRP) with tracking capabilities
- IEEE protocol auto-discovery
- Bidirectional Forwarding Detection (BFD)
- Redundant and hot-swappable power supplies
- Redundant fans
- Hot-swappable fan tray
- Hot-swappable expansion modules
- Built-in CPU protection against malicious attacks

Resiliency and high availability
- Unified management, control and fabric-mesh virtual chassis technology
- Virtual chassis 1:N redundant supervisor manager
- Virtual chassis In-Service Software Upgrade (ISSU)
- Smart continuous switching technology
- ITU-T G.8032/Y1344 2010: Ethernet Ring Protection
- IEEE 802.1s Multiple Spanning Tree Protocol (MSTP), IEEE 802.1D Spanning Tree Protocol (STP) and IEEE 802.1w Rapid Spanning Tree Protocol (RSTP)
- Per-VLAN spanning tree (PVST+) and Alcatel-Lucent 1x1 STP mode
- IEEE 802.3ad/802.1AX Link Aggregation Control Protocol (LACP) and static LAG groups across modules
- Virtual Router Redundancy Protocol (VRRP) with tracking capabilities
- IEEE protocol auto-discovery
- Bidirectional Forwarding Detection (BFD)
- Redundant and hot-swappable power supplies
- Redundant fans
- Hot-swappable fan tray
- Hot-swappable expansion modules
- Built-in CPU protection against malicious attacks

Data center networking
- Dynamic Virtual Network Profiles (vNP)
- IEEE 802.1Qbg Edge Virtual Bridging (EVB)
- IEEE 802.1Qbb Priority Flow Control (PFC)
- IEEE 802.1Qaz Enhanced Transmission Selection (ETS)
- IEEE 802.1Qaz Data Center Bridging Capabilities Exchange Protocol (DCBX)
- IEEE 802.1 Converged Enhanced Ethernet (CEE) 1.01
- IEEE 802.1aq Shortest Path Bridging (SPB-M)
- RFC 7843 Virtual eXtensible Local Area Network (VXLAN)
Software Defined Networking (SDN)
- Programmable AOS RESTful API
- Fully programmable OpenFlow 1.3.1 and 1.0 agent for control of native OpenFlow and hybrid ports.
- OpenStack networking plug-in compatible with Grizzly or higher
- Software-controlled VXLAN hardware VTEP gateway

Converged storage I/O
- Multi-hop FCoE transit switching with FIP snooping
- NPIV FCoE to FC forwarder gateway with dynamic multipath load balancing complaint with T11/BB-5
- End-to-end FCoE converged network adapter (can) switching with T11-BB-6
- Native FC ANSI INCITS FC-PI-4 and FC-PI-5
- Dynamic session load balancing for the N_port and F_port functionality
- Multi-hop FCoE for FC Inter-switch Link (ISL) tunneling
- Multi-hop FCoE for standalone FC host bus adapter (HBA) tunneling into storage area network (SAN)
- Virtual SAN (VSAN) to VLAN mapping and FIP snooping bridge (FSB)
- Fabric-provided MAC Address (FPMA) support
- Server-provided MAC Address (SPMA) support in FIP snooping

Advanced security
Access control
- Autosensing IEEE 802.1X multi-client, multi-VLAN support for bridging and SPBM/VXLAN services
- MAC-based authentication for non-IEEE 802.1X hosts
- Secure Shell (SSH) with public key infrastructure (PKI) support for bridging and SPBM/VXLAN services
- Terminal Access Controller Access-Control System Plus (TACACS+) client
- Centralized Remote Access Dial-In User Service (RADIUS) and Lightweight Directory Access Protocol (LDAP) administrator authentication
- Centralized RADIUS for device authentication and network access control authorization
- Learned Port Security (LPS) or MAC address lockdown
- Access Control Lists (ACLs); flow-based filtering in hardware (Layer 1 to Layer 4)
- DHCP snooping, DHCP IP and Address Resolution Protocol (ARP) spoof protection
- ARP poisoning detection
- IP source filtering as a protective and effective mechanism against ARP attacks

Quality of Service (QoS)
- Priority queues: Eight hardware-based queues per port
- Traffic prioritization: Flow-based QoS
- Flow-based traffic policing and bandwidth management
- 32-bit IPv4/128-bit IPv6 non-contiguous mask classification
- Egress traffic shaping
- Lossless Virtual Output Queuing (VOQ) with configurable scheduling algorithms
- DiffServ architecture
- Congestion avoidance: Support for end-to-end head-of-line (E2E-HOL) blocking prevention, IEEE 802.1Qbb Priority-based Flow Control (PFC) and IEEE 802.3x Flow Control (FC)

IPv4 routing
- Multiple VRF
- Static routing
- Routing Information Protocol (RIP) v1 and v2
- Open Shortest Path First (OSPF) v2 with graceful restart
- Intermediate System to Intermediate System (IS-IS) with graceful restart
- Border Gateway Protocol (BGP) v4 with graceful restart
- Generic Routing Encapsulation (GRE) and IP/IP tunneling
- Virtual Router Redundancy Protocol (VRRPv2)
- DHCP relay (including generic UDP relay)
- ARP
- Policy-based routing and server load balancing
- DHCPv4 server
- Distributed ARP learning

IPv6 routing
- Multiple VRF
- Internet Control Message Protocol version 6 (ICMPv6)
- Static routing
- Routing Information Protocol Next Generation (RIPvng)
- OSPF v3 with graceful restart
- Intermediate System to Intermediate System (IS-IS) with graceful restart
- Multi-Topology IS-IS
- BGP v4 multiprotocol extensions for IPv6 routing (MP-BGP)
- Graceful restart extensions for OSPF and BGP
- Virtual Router Redundancy Protocol (VRRPv3)
- Neighbor Discovery Protocol (NDP)
- Policy-based routing and server load balancing
- DHCPv6 server

IPv4/IPv6 multicast
- Internet Group Management Protocol (IGMP) v1/v2/v3 snooping
- Protocol Independent Multicast – Sparse-mode (PIM-SM), Source Specific Multicast (PIM-SSM)
- Protocol Independent Multicast – Dense-mode (PIM-DM), Bidirectional Protocol Independent Multicast (PIM-BiDir)
- Distance Vector Multicast Routing Protocol (DVMRP)
- Multicast Listener Discovery (MLD) v1/v2 snooping
- PIM to DVMRP gateway support
- (S,G) and (*,G) forwarding

Advanced Layer 2 services
- Ethernet services support using IEEE 802.1ad Provider Bridges (also known as Q-in-Q or VLAN stacking)
• Fabric virtualization services
  IEEE802.1aq Shortest Path Bridging (SPB-M) and VXLAN
  • Ethernet Virtual Connection (EVC) support for transparent LAN services such as E-LAN, E-Line and E-Tree
  • Multipoint Ethernet VPN (EVPN) over I-SID or VNI service virtualization or Q-in-Q tunnels
  • Ethernet network-to-network interface (NNI) and user network interface (UNI)
  • Service Access Point (SAP)
  • Service VLAN (SVLAN) and Customer VLAN (CVLAN) support
  • VLAN translation and mapping including CVLAN to SVLAN
  • C-tag to S-tag priority mapping
  • Port mapping
  • DHCP Option 82: Configurable relay agent information
  • MVRP
  • High availability VLAN (HA-VLAN) for L2 clusters such as MS-NLB and active-active Firewall clusters
  • Jumbo frame support
  • Bridge Protocol Data Unit (BPDU) blocking
  • STP Root Guard

* Throughput values in table are based on 64-byte packets with 20-byte overhead. Without considering packet overhead, the throughput values would be higher as in OS6900-X20: 625 Mpps, OS6900-X40: 1250 Mpps, OS6900-X72: 1400 Mpps, OS6900-V72: 2600 Mpps.
** Maximum power consumption under full L2 traffic load includes a fan tray, two power supplies, and transceivers. Expansion plug-in modules not included.
*** Fully populated chassis includes a fan tray, two power supplies, and all expansion plug-in modules; transceivers not included.

**Ports are dual personality: Operate as FC or Ethernet/VFL.

## Power supplies

All OmniSwitch 6900 models support 1+1 redundant, hot-swappable AC and DC power supplies. The primary and backup power supply units are internal, but removable to allow for easier maintenance and replacement. There is no service interruption when a new power supply is installed or an old one replaced. The OS6900-V72 and OS6900-C32 ship with two redundant power supply units by default. All other OS6900 models ship with one power supply unit.

OS6900-T40-xx
OS6900-T40: 10 Gb Ethernet L2/L3 fixed configuration chassis in a 1RU form factor with 40 10GbE ports, auto-negotiable 100-BaseT, 1/10 GigE two optional module slots. Front-to-back cooling. The chassis includes a 450W AC power supply. A second power supply slot is supported for redundancy. Redundant power supply must be ordered separately. The OS6900-40 ships with a country-specific power cord, user manuals access card, rack mounts, and USB to RJ-45 adapter. (-xx to be replaced with the country-specific power cord code (e.g., -EU for Europe).)

OS6900-T40D-F
OS6900-T40: 10 Gb Ethernet L2/L3 fixed configuration chassis in a 1RU form factor with 40 10GbE ports, auto-negotiable 100-BaseT, 1/10 GigE two optional module slots. Front-to-back cooling. The chassis includes a 450W AC power supply. A second power supply slot is supported for redundancy. Redundant power supply must be ordered separately. The bundle ships with a user manuals access card, rack mounts, and USB to RJ-45 adapter.

OS6900-T40D-xx
OS6900-T40D: 10 Gb Ethernet L2/L3 fixed configuration chassis in a 1RU form factor with 40 10GbE ports, auto-negotiable 100-BaseT, 1/10 GigE two optional module slots. Back-to-front cooling. The chassis includes a 450W AC power supply. A second power supply slot is supported for redundancy. Redundant power supply must be ordered separately. The OS6900-40 ships with a country-specific power cord, user manuals access card, rack mounts, and USB to RJ-45 adapter. (-xx to be replaced with the country-specific power cord code (e.g., -EU for Europe).)

OS6900-X20-xx
OS6900-X20: 10 Gb Ethernet L2/L3 fixed configuration chassis in a 1RU form factor with 20 SFP+ ports, one optional module slot. The chassis includes a 450 W front-to-back cooling AC power supply. (-xx to be replaced with the country-specific power cord code (e.g., -EU for Europe).)

OS6900-X20D-F
OS6900-X20: 10 Gb Ethernet L2/L3 fixed configuration chassis in a 1RU form factor with 20 SFP+ ports, one optional module slot. The chassis includes a 450 W front-to-back cooling DC power supply.

OS6900-X40-F-xx
OS6900-X40: 10 Gb Ethernet L2/L3 fixed configuration chassis in a 1RU form factor with 40 SFP+ ports, two optional module slots. The chassis includes a 450 W front-to-back cooling AC power supply. (-xx to be replaced with the country-specific power cord code (e.g., -EU for Europe).)
OS6900 Switch family

OS6900-X40D-F  OS6900-X40: 10 Gb Ethernet L2/L3 fixed configuration chassis in a 1RU form factor with 40 SFP+ ports, two optional module slots. The chassis includes a 450 W front-to-back cooling DC power supply.

OS6900-X20-R-xx  OS6900-X20: 10 Gb Ethernet L2/L3 fixed configuration chassis in a 1RU form factor with 20 SFP+ ports, one optional module slot. The chassis includes a 450 W back-to-front cooling AC power supply. (-xx to be replaced with the country-specific power cord code (e.g., -EU for Europe)).

OS6900-X20D-R  OS6900-X20: 10 Gb Ethernet L2/L3 fixed configuration chassis in a 1RU form factor with 20 SFP+ ports, two optional module slots. The chassis includes a 450 W back-to-front cooling DC power supply.

OS6900-X40-R-xx  OS6900-X40: 10 Gb Ethernet L2/L3 fixed configuration chassis in a 1RU form factor with 40 SFP+ ports, two optional module slots. The chassis includes a 450 W back-to-front cooling AC power supply. (-xx to be replaced with the country-specific power cord code (e.g., -EU for Europe)).

TA6900-X72-F-US  1RU 10GE L3 fixed chassis with 48 10G SFP+ and 6 40G QSFP+ ports. QSFP+ ports operate as 40GE or 4x10GE. Front to back cooling. Includes AC power supply and cord. Ships with manuals access card and rack mounts. OS6900-SW-AR license included. US TAA

TA6900-X72-R-US  1RU 10GE L3 fixed chassis with 48 10G SFP+ and 6 40G QSFP+ ports. QSFP+ ports operate as 40GE or 4x10GE. Back to front cooling. Includes AC power supply and cord. Ships with manuals access card and rack mounts. OS6900-SW-AR license included. US TAA

Plug-in modules

OS-XNI-U12E  10 Gb Ethernet or 2/4/8 Gigabit Fibre Channel (FC) optional module for the OS6900 series of switches with 12 SFP+ ports that support 1Gig and 10 Gig Ethernet speeds or 2Gig/4Gig/8Gig FC speeds. Requires OS6900- SW-DC license to use the ports in FC mode.

OS-XNI-U12  10 Gb Ethernet Optional Module for the OS6900 series of switches. Supports 12 SFP+ ports.

OS-XNI-U4  10 Gb Ethernet Optional Module for the OS6900 series of switches. Supports 4 SFP+ ports.

OS-HN1-U6  Optional Module for the OS6900 series of switches. Supports 2 QSFP+ ports and 4 SFP+ ports.

OS-QNI-U3  40 Gigabit Ethernet Optional Module for the OS6900 series of switches. Supports 3 QSFP+ ports.

OS-XNI-T8  10 Gb Ethernet Optional Module for the OS6900 series of switches with 8 10GBase-T ports that support 100-BaseT, 1 G and 10 G speeds.

Backup power supplies and fan trays

OS6900-BP-F-xx  Modular 450W AC backup power supply. Front-to-back cooling. Provides backup system power to one 6900 switch; (-xx to be replaced with the country-specific power cord code (e.g., -EU for Europe)).

OS6900-BPD-F  Modular 450W DC backup power supply. Front-to-back cooling. Provides backup system power to one 6900 switch.

OS6900-BP-R-xx  Modular 450W AC backup power supply. Back-to-front cooling. Provides backup system power to one 6900 switch; (-xx to be replaced with the country-specific power cord code (e.g., -EU for Europe)).

OS6900-BPD-R  Modular 450W DC backup power supply. Back-to-front cooling. Provides backup system power to one 6900 switch.

OS6900C-BP-F-xx  Modular 650W AC backup power supply. Front-to-back cooling. Provides system power to one OS6900-V72 or C32 switch; (-xx to be replaced with the country specific power cord code (e.g. -EU for Europe)).

OS6900C-BPD-F  Modular 650W DC backup power supply. Front-to-back cooling. Provides system power to one OS6900-V72 or C32 switch.

OS6900C-BP-R-xx  Modular 650W AC backup power supply. Back-to-front cooling. Provides system power to one OS6900-V72 or C32 switch; (-xx to be replaced with the country specific power cord code (e.g. -EU for Europe)).

OS6900C-BPD-R  Modular 650W DC backup power supply. Back-to-front cooling. Provides system power to one OS6900-V72 or C32 switch.

OS6900-FT-F  OS6900 replacement fan tray; front-to-back cooling.

OS6900C-FTKIT-F  Replacement fan tray kit for OS6900-V72 and C32. Front-to-back cooling. Kit contains 6 fan tray units.

OS6900Q-FT-F  Replacement fan tray for OS6900-Q32 and OS6900-X72; front-to-back cooling.

OS6900-FT-R  OS6900 replacement fan tray; front-to-back cooling.

OS6900Q-FT-R  OS6900Q replacement fan tray for OS6900-Q32 and OS6900-X72; front-to-back cooling.

OS6900C-FTKIT-R  Replacement fan tray kit for OS6900-V72 and OS6900-C32. Back-to-front cooling. Kit contains 6 fan tray units.
### OS6900 Switch family

#### Software

OS6900-SW-AR  
Advanced routing software license. Includes support for Policy Based Routing, VRF, BGP, OSPFv2, VRRPv2, PIM-SM/DM, DVMRP, IPv6 Routing, OSPFv3, RIPng, VRRPv3, SPB, Virtual Chassis (VC), and if supported VXLAN VTEP.

OS6900-SW-DC  
Data Center Software for support of DCBX, FCOE and EVB on OS6900. One license required per chassis.

#### GigE transceivers

<table>
<thead>
<tr>
<th>Model</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SFP-GIG-T</td>
<td>1000Base-T Gb Ethernet Transceiver (SFP MSA). SFP works at 1000 M/b/s speed and full-duplex mode.</td>
</tr>
<tr>
<td>SFP-GIG-SX</td>
<td>1000Base-SX Gb Ethernet optical transceiver (SFP MSA).</td>
</tr>
<tr>
<td>SFP-GIG-LX</td>
<td>1000Base-LX Gb Ethernet optical transceiver (SFP MSA).</td>
</tr>
<tr>
<td>SFP-GIG-H40</td>
<td>1000Base-LH Gb Ethernet optical transceiver (SFP MSA). Typical reach of 40 km on 9/125 µm SMF.</td>
</tr>
<tr>
<td>SFP-GIG-H70</td>
<td>1000Base-LH Gb Ethernet optical transceiver (SFP MSA). Typical reach of 70 km on 9/125 µm SMF.</td>
</tr>
</tbody>
</table>

#### 10 GigE transceivers

<table>
<thead>
<tr>
<th>Model</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SFP-10G-SR</td>
<td>10 Gb optical transceiver (SFP+). Supports multimode fiber over 850 nm wavelength (nominal) with an LC connector. Typical reach of 300 m.</td>
</tr>
<tr>
<td>SFP-10G-LR</td>
<td>10 Gb optical transceiver (SFP+). Supports monomode fiber over 1310 nm wavelength (nominal) with an LC connector. Typical reach of 10 km.</td>
</tr>
<tr>
<td>SFP-10G-ER</td>
<td>10 Gb optical transceiver (SFP+). Supports monomode fiber over 1550 nm wavelength (nominal) with an LC connector. Typical reach of 40 km.</td>
</tr>
<tr>
<td>SFP-10G-LRM</td>
<td>10 Gb optical transceiver (SFP+). Supports multimode fiber over 1310 nm wavelength (nominal) with an LC connector. Typical reach of 220 m on FDDI-grade (62.5 µm).</td>
</tr>
<tr>
<td>SFP-10G-GIG-SR</td>
<td>Dual-speed SFP+ optical transceiver. Supports multimode fiber over 850 nm wavelength (nominal) with an LC connector. Supports 1000Base-SX and 10GBase-SR.</td>
</tr>
<tr>
<td>SFP-10G-24WD8D0</td>
<td>10 Gb Dense Wavelength Division Multiplexing (DWDM) optical transceiver (SFP+ MSA), 1558.17 nm/Channel 24 (100GHz ITU Grid), 80 km, LC Connector.</td>
</tr>
<tr>
<td>SFP-10G-ZR</td>
<td>10 Gigabit industrial optical transceiver (SFP+). Supports data transmission at 1550nm over up to 80km single mode fiber. LC connector type.</td>
</tr>
<tr>
<td>SFP-10G-C1M</td>
<td>10 Gb direct attached copper cable (1 m, SFP+)</td>
</tr>
<tr>
<td>SFP-10G-C3M</td>
<td>10 Gb direct attached copper cable (3 m, SFP+)</td>
</tr>
<tr>
<td>SFP-10G-C7M</td>
<td>10 Gb direct attached copper cable (7 m, SFP+)</td>
</tr>
</tbody>
</table>

#### 25 GigE transceivers

<table>
<thead>
<tr>
<th>Model</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SFP-25G-SR</td>
<td>Gigabit optical transceiver (SFP28). Supports link lengths of 70m on OM3 and 100m on OM4 multimode fiber cables.</td>
</tr>
<tr>
<td>SFP-25G-CLR</td>
<td>25 Gigabit optical transceiver (SFP28). Supports link lengths of 2km over single mode fiber cables.</td>
</tr>
<tr>
<td>SFP-25G-LR</td>
<td>25 Gigabit optical transceiver (SFP28). Supports link lengths of 10km over single mode fiber cables.</td>
</tr>
<tr>
<td>SFP-25G-A20M</td>
<td>25 Gigabit active optical cable (20m, SFP28)</td>
</tr>
<tr>
<td>SFP-25G-C1M</td>
<td>25 Gigabit direct attached copper cable (1 m, SFP28)</td>
</tr>
<tr>
<td>SFP-25G-C3M</td>
<td>25 Gigabit direct attached copper cable (3 m, SFP28)</td>
</tr>

#### 100 GigE transceivers

<table>
<thead>
<tr>
<th>Model</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>QSFP-100G-SR4</td>
<td>100 Gigabit optical transceiver (QSFP28). Supports maximum link length of 100 m on OM4 Multi Mode Fiber using 850 nm wavelength.</td>
</tr>
<tr>
<td>QSFP-100G-CLR4</td>
<td>100 Gigabit optical transceiver (QSFP28). Supports maximum link length of 2 km on Single Mode Fiber using 1310 nm wavelength. The transceiver supports both FEC and non-FEC applications.</td>
</tr>
<tr>
<td>QSFP-100G-LR4</td>
<td>100 Gigabit optical transceiver (QSFP28). Supports maximum link length of 10 km on Single Mode Fiber using 1310 nm wavelength.</td>
</tr>
<tr>
<td>QSFP-100G-CWDM4</td>
<td>100 Gigabit optical transceiver (QSFP28). Supports maximum link length of 2 km on Single Mode Fiber using 1310 nm wavelength. The transceiver supports FEC applications.</td>
</tr>
<tr>
<td>QSFP-100G-C1M</td>
<td>100 Gigabit direct attached copper cable (1m, QSFP28)</td>
