- IP Multicast Switching and Routing must be enabled to set the IGMP source timeout on the system and/or the specified VLANs.
- If the IGMP source timeout is already configured on the system, then the VLAN configuration will override the system's configuration.
- Use the `no` form of this command to restore the IGMP source timeout back to the default value (30 seconds) on the system or the specified VLAN. In addition, specifying a value of 0 with this command also restores the default value (for example, `ip multicast source-timeout 0`).

**Examples**

```
-> ip multicast source-timeout 100
-> ip multicast source-timeout 0
```
-> no ip multicast source-timeout
-> ip multicast vlan 2 source-timeout 100
-> ip multicast vlan 3-5 source-timeout 100
-> ip multicast vlan 2 source-timeout 0
-> no ip multicast vlan 2 source-timeout
-> no ip multicast vlan 3-5 source-timeout 100
-> ip multicast service 2 source-timeout 100
-> ip multicast service 3-5 source-timeout 100
-> ip multicast service 2 source-timeout 0
-> no ip multicast service 2 source-timeout
-> no ip multicast service 3-5 source-timeout

**Release History**

Release 7.1.1; command was introduced.
Release 8.4.1.R02; service parameter added.

**Related Commands**

`show ip multicast` Displays the IP Multicast Switching and Routing status and general configuration parameters.

ip multicast querying

Enables or disables IGMP querying on the specified VLAN or on the system if no VLAN is specified.

```
ip multicast [vlan vlan_id[-vlan_id2]] querying {enable | disable} [static-source-ip ip_address]
no ip multicast [vlan vlan_id[-vlan_id2]] querying [static-source-ip]
```

### Syntax Definitions

- `vlan_id[-vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `enable` Enable IGMP querying.
- `disable` Disable IGMP querying.
- `ip_address` A static source IPv4 address to use for IGMP querying. This parameter is not supported.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900V72/C32</th>
<th>6900X48C6/T48C6</th>
<th>6900X48C4E/V48C8/C32E/T24C2</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- IP Multicast Switching and Routing must be enabled to enable IGMP querying on the system and/or specified VLANs.
- If the IGMP querying is already enabled/disabled on the system, then the VLAN configuration will override the system's configuration.
- IGMP querying refers to requesting the network's IGMP group membership information by sending out IGMP queries. IGMP querying also involves participating in IGMP querier election.
- Use the `no` form of this command to restore the IGMP querying status to the default value (disabled) on the system or the specified VLAN.

### Examples

```
-> ip multicast querying enable
-> ip multicast querying disable
```
-> no ip multicast querying
-> ip multicast vlan 2 querying enable
-> ip multicast vlan 3-5 querying disable
-> no ip multicast vlan 2 querying
-> no ip multicast vlan 3-5 querying

**Release History**

Release 7.1.1; command was introduced.

ip multicast robustness

Sets the IGMP robustness variable on the specified VLAN, Shortest Path Bridging (SPB) service or on the system if no VLAN or SPB service is specified.

```
ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] robustness [robustness]
no ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] robustness
```

Syntax Definitions

- `vlan_id[-vlan_id2]`: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]`: SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `robustness`: IGMP robustness variable. Valid range is 1–7.

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>robustness</td>
<td>2</td>
</tr>
</tbody>
</table>

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- IP Multicast Switching and Routing must be enabled to set the IGMP robustness variable on the system and/or the specified VLANs or SPB services.
- If the IGMP robustness variable is already configured on the system, then the VLAN or SPB service configuration will override the system's configuration.
- Robustness variable allows fine-tuning on the network, where the expected packet loss would be greater.
- Due to protocol inter-operation requirements, this command specifies only a default version of the IGMP robustness variable to use.
Use the **no** form of this command to restore the IGMP robustness variable back to the default value (2) on the system, the specified VLAN, or the specified SPB service. In addition, specifying a value of 0 with this command also restores the default value (for example, ip multicast robustness 0).

### Examples

```
-> ip multicast robustness 3
-> ip multicast robustness 0
-> no ip multicast robustness
-> ip multicast vlan 2 robustness 3
-> ip multicast vlan 3-5 robustness 3
-> ip multicast vlan 2 robustness 0
-> no ip multicast vlan 2 robustness
-> no ip multicast vlan 3-5 robustness
-> ip multicast service 2 robustness 3
-> ip multicast service 3-5 robustness 3
-> ip multicast service 2 robustness 0
-> no ip multicast service 2 robustness
-> no ip multicast service 3-5 robustness
```

### Release History

Release 7.1.1; command was introduced.
Release 8.4.1; **service** parameter added.

**ip multicast spoofing**

Enables or disables IGMP spoofing on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```
ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] spoofing {enable | disable}
```

```
oip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] spoofing
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]`: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]`: SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `enable`: Enable IGMP spoofing.
- `disable`: Disable IGMP spoofing.

** Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
<tr>
<td>disable</td>
<td>enable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove an IGMP spoofing configuration and return the specified VLAN, SPB service, or system to the default behavior.
- If the IGMP spoofing is already enabled on the system, then the VLAN or SPB service configuration will override the system's configuration.
- IGMP spoofing refers to replacing a client source MAC and IP address with the system's MAC and IP address when relaying or proxying aggregated IGMP group membership information to other devices.
- By default, the source IP address is not specified for spoofing; the system determines these addresses automatically. Optionally configure a static source IP address using the `ip multicast spoofing static-source-ip` command to overcome the need for an IP interface. If configured, the static source IP is always used for spoofing, regardless of the IP interface address or administrative state.
Examples

- `ip multicast spoofing enable`
- `ip multicast spoofing disable`
- `no ip multicast spoofing`
- `ip multicast vlan 2 spoofing enable`
- `ip multicast vlan 3-5 spoofing disable`
- `no ip multicast vlan 2 spoofing`
- `no ip multicast vlan 3-5 spoofing`
- `ip multicast service 2 spoofing enable`
- `ip multicast service 3-5 spoofing disable`
- `no ip multicast service 2 spoofing`
- `no ip multicast service 3-5 spoofing`

Release History

**ip multicast spoofing static-source-ip**

Configures an IGMP static spoofing address on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```
ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] spoofing static-source-ip ip_address
no ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] spoofing static-source-ip
```

### Syntax Definitions

- **vlan_id[-vlan_id2]**  
  VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.

- **service_id[-service_id2]**  
  SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*

- **ip_address**  
  A static source IPv4 address to use for spoofing.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of this command to remove a static source IP address.

- IGMP spoofing refers to replacing a client source MAC and IP address with the system's MAC and IP address when relaying or proxying aggregated IGMP group membership information to other devices.

- By default, a source IP address is not specified when spoofing is enabled. As a result, the switch will automatically use the address of the IP interface associated with the LAN. If there is no IP interface address to use, the switch will then use the Loopback0 interface address associated with the current VRF instance.

- Use this command to optionally configure a static source IP address to overcome the need for an IP interface. If configured, the static source IP is always used for spoofing, regardless of the IP interface address or administrative state.
Examples

-> ip multicast spoofing static-source-ip 10.2.2.1
-> no ip multicast spoofing static-source-ip
-> ip multicast vlan 2 spoofing static-source-ip 10.2.2.1
-> no ip multicast vlan 2 spoofing static-source-ip
-> ip multicast vlan 3-5 spoofing static-source-ip 10.2.2.1
-> no ip multicast vlan 3-5 spoofing static-source-ip
-> ip multicast service 2 spoofing static-source-ip 11.2.2.1
-> no ip multicast service 2 spoofing static-source-ip
-> ip multicast service 3-5 spoofing static-source-ip 11.2.2.1
-> no ip multicast service 3-5 spoofing static-source-ip

**ip multicast zapping**

Enables or disables IGMP zapping on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```bash
ip multicast [vlan vlan_id[-vlan_id2] | service service_id] zapping [{enable | disable}]
no ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] zapping
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]`: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]`: SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `enable`: Enable IGMP zapping.
- `disable`: Disable IGMP zapping.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- If the IGMP zapping is already enabled on the system, then the VLAN or SPB service configuration will override the system's configuration.
- IGMP zapping refers to processing membership, immediate source filter removals and will not wait for the protocol's specified time period. This mode facilitates IP TV applications looking for quick changes between IP multicast groups.
- Use the **no** form of this command to restore the IGMP zapping status back to the default value (disabled) on the system, the specified VLAN, or the specified SPB service.

**Examples**

- `-> ip multicast zapping enable`
-> ip multicast zapping disable
-> no ip multicast zapping
-> ip multicast vlan 2 zapping enable
-> ip multicast vlan 3-5 zapping disable
-> no ip multicast vlan 2 zapping
-> no ip multicast vlan 3-5 zapping
-> ip multicast service 2 zapping enable
-> ip multicast service 3-5 zapping disable
-> no ip multicast service 2 zapping
-> no ip multicast service 3-5 zapping

**ip multicast querier-forwarding**

Enables or disables IGMP querier forwarding on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```
ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] querier-forwarding [enable | disable]

no ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] querier-forwarding
```

**Syntax Definitions**

- `vlan vlan_id[-vlan_id2]`: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service service_id[-service_id2]`: SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.
- `enable`: Enable IGMP querier forwarding.
- `disable`: Disable IGMP querier forwarding.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>

<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- If the IGMP querier forwarding is already enabled on the system, then the VLAN or SPB service configuration will override the system's configuration.

- IGMP querier forwarding refers to promoting detected IGMP queriers to receive all IP multicast data traffic.

- Use the **no** form of this command to restore the IGMP querier forwarding status back to the default value (disabled) on the system, the specified VLAN, or the specified SPB service.

**Examples**

```
-> ip multicast querier-forwarding enable
```
-> ip multicast querier-forwarding disable
-> no ip multicast querier-forwarding
-> ip multicast vlan 2 querier-forwarding enable
-> no ip multicast vlan 3-5 querier-forwarding disable
-> ip multicast vlan 2 querier-forwarding
-> no ip multicast vlan 3-5 querier-forwarding
-> ip multicast service 2 querier-forwarding enable
-> ip multicast service 3-5 querier-forwarding
-> no ip multicast service 2 querier-forwarding
-> no ip multicast service 3-5 querier-forwarding

### ip multicast proxying

Enables or disables IGMP proxying on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```
ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] proxying [enable | disable]
no ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] proxying
```

#### Syntax Definitions

- `vlan_id[-vlan_id2]`  
  VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.

- `service_id[-service_id2]`  
  SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*

- `enable`  
  Enable IGMP proxying.

- `disable`  
  Disable IGMP proxying.

#### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

#### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

#### Usage Guidelines

- If the IGMP proxying is already enabled on the system, then the VLAN or SPB service configuration will override the system's configuration.

- IGMP proxying refers to processing membership information on behalf of client systems and reporting membership on their behalf.

- Proxy reported IGMP packets are sent using the source MAC address of the proxying switch. Unless the spoofing feature is used, proxy reported IGMP packets will be sent using 0.0.0.0 for the IPv4 source address.

- Use the `no` form of this command to restore the IGMP proxying status back to the default value (disabled) on the system, the specified VLAN, or the specified SPB service.
Examples

-> ip multicast proxying enable
-> ip multicast proxying disable
-> no ip multicast proxying
-> ip multicast vlan 2 proxying enable
-> ip multicast vlan 3-5 proxying disable
-> no ip multicast vlan 2 proxying
-> no ip multicast vlan 3-5 proxying
-> ip multicast service 2 proxying enable
-> ip multicast service 3-5 proxying disable
-> no ip multicast service 2 proxying
-> no ip multicast service 3-5 proxying

Release History

Release 7.1.1; command was introduced.
Release 8.4.1; service parameter added.

Related Commands

**ip multicast helper-address**

Specifies the destination IP address of a relay host where IGMP host Reports and Leave messages are sent.

```
ip multicast [vlan vlan_id[-vlan_id2]] helper-address ip_address
```

```
no ip multicast [vlan vlan_id[-vlan_id2]] helper-address
```

### Syntax Definitions

- `vlan_id[-vlan_id2]`  	VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `ip_address`  
The IP address of the relay host.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ip_address</code></td>
<td>0.0.0.0</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- After the destination IP address is specified, the IPMS reporting feature is enabled.
- An operational IPv4 interface is required for the receiving LAN before any IGMP Reports and Leave messages can be relayed.
- Configuring a destination IP helper address is supported only in the VLAN domain; the service domain is not supported.
- Use the `no` form of this command to restore the IPMS reporting feature back to the default value (IP address 0.0.0.0) on the system. When the IP address is set to 0.0.0.0, the IPMS reporting feature is disabled.

### Examples

- `-> ip multicast helper-address 10.1.1.198`
- `-> no ip multicast helper-address`
- `-> ip multicast vlan 2 helper-address 10.1.1.198`
- `-> ip multicast vlan 3-5 helper-address 10.1.1.198`
- `-> no ip multicast vlan 2 helper-address`
-> no ip multicast vlan 3-5 helper-address

**ip multicast zero-based-query**

Configures the use of an all-zero source IPv4 address for IGMP query packets when a non-querier is querying the membership of a port. This value is set for the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or service is specified.

```
ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] zero-based-query [enable | disable]
no ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] zero-based-query
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]` SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `enable` Enable IGMP zero-based querying.
- `disable` Disable IGMP zero-based querying.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td></td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- The IGMP zero-based query status set for a specific VLAN or SPB service overrides the zero-based query status set for the system.
- Use the **no** form of this command to restore the IGMP zero-based query status back to the default value (enabled) on the system, the specified VLAN, or the specified SPB service.

**Examples**

- `-> ip multicast zero-based-query enable`
- `-> ip multicast zero-based-query disable`
- `-> no ip multicast zero-based-query`
-> ip multicast vlan 2 zero-based-query enable
-> no ip multicast vlan 2 zero-based-query
-> no ip multicast vlan 3-5 zero-based-query
-> ip multicast vlan 3-5 zero-based-query enable
-> ip multicast service 10 zero-based-query disable
-> ip multicast service 10-15 zero-based-query disable
-> no ip multicast service 10 zero-based-query
-> no ip multicast service 10-15 zero-based-query disable

  alaIpmsConfigZeroBasedQuery
**ip multicast forward-mode**

Configures the Layer 2 forwarding mode for IPv4 Multicast Switching (does not apply to IPv4 Multicast Routing). The forwarding mode is set for the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```plaintext
ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] forward-mode {asm | ssm | mac | auto}
```

```plaintext
no ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] forward-mode
```

### Syntax Definitions

- **vlan_id[-vlan_id2]**: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- **service_id[-service_id2]**: SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- **asm**: Sets the IPMS forwarding mode to ASM (the bridge lookup is based on the packet group destination IP address). *This parameter is supported only in the VLAN domain; service domain is not supported.*
- **ssm**: Sets the IPMS forwarding mode to SSM (the bridge lookup is based on the packet source IP as well as the group destination IP). *This parameter is supported only in the VLAN domain; service domain is not supported.*
- **mac**: Sets the IPMS forwarding mode to MAC address (the bridge lookup is based on the MAC destination address).
- **auto**: Automatically determines the IPMS forwarding mode based on the current IGMP protocol version and the existing protocol state.

### Defaults

By default, the forwarding mode is set to automatic.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>

OmniSwitch AOS Release 8 CLI Reference Guide   April 2023   page 32-51
Usage Guidelines

- The forwarding mode set for a specific VLAN or SPB service overrides the forwarding mode set for the system.

- If multicast routing is enabled on a VLAN, the following conditions apply:
  - On the OmniSwitch 9900, the bridging mode is independent of the routing mode. As a result, ASM bridging is allowed in a VLAN that has SSM routing configured or SSM bridging is allowed in a VLAN that has ASM routing configured.
  - Multicast routing is not supported on the OmniSwitch 6560 and OmniSwitch 6570M.
  - On all other OmniSwitch platforms, the routing configuration overrides the forwarding mode setting and determines the forwarding mode based on the group mappings. For example, BIDIR flows will use ASM while DVMRP flows and all other PIM modes will use SSM.

- Use the no form of this command to restore the Layer 2 forwarding mode back to the default value (automatic) on the system or the specified VLAN or SPB service.

Examples

- `-> ip multicast forward-mode auto`
- `-> ip multicast forward-mode asm`
- `-> ip multicast forward-mode ssm`
- `-> ip multicast forward-mode mac`
- `-> no ip multicast forward-mode`
- `-> ip multicast vlan 100 forward-mode auto`
- `-> ip multicast vlan 101-104 forward-mode asm`
- `-> ip multicast vlan 100 forward-mode ssm`
- `-> ip multicast vlan 101-104 forward-mode mac`
- `-> no ip multicast vlan 100 forward-mode`
- `-> no ip multicast vlan 101-104 forward-mode`
- `-> ip multicast service 10 forward-mode mac`
- `-> ip multicast service 11-15 forward-mode mac`
- `-> no ip multicast service 10 forward-mode`
- `-> no ip multicast service 11-15 forward-mode`

Release History

Release 8.3.1; command introduced.
Release 8.4.1.R02; service parameter added.

Related Commands

```
show ip multicast
```
Displays the IP Multicast Switching and Routing status and general configuration parameters.

```
show ip multicast bridge
```
Displays the forwarding mode for IP multicast bridge table entries.

MIB Objects

```
alaIpmsConfigTable
  alaIpmsConfigType
  alaIpmsConfigAddressType
  alaIpmsConfigValue
  alaIpmsConfigForwardMode
```
**ip multicast update-delay-interval**

Sets the amount of time to delay IPv4 multicast forwarding updates on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```
ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] update-delay-interval milliseconds
```

```
no ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] update-delay-interval
```

### Syntax Definitions

- `vlan_id[-vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]` SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `milliseconds` The number of milliseconds to defer forwarding updates. Valid range is 0–10000.

### Defaults

By default, the forwarding update delay interval is set to zero.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- When the forwarding update delay is set to zero, forwarding updates are processed immediately with minimal latency. Configuring a forwarding update delay value can limit the effects of persistent churn on the system.
- If the forwarding update delay interval is already configured on the system, then the VLAN or SPB service configuration will override the system's configuration.
- Use the `no` form of this command to restore the forwarding update delay interval back to the default value (zero) on the system or the specified VLAN or SPB service.

### Examples

```
-> ip multicast update-delay-interval 10
-> no ip multicast update-delay-interval
```
-> ip multicast vlan 100 update-delay-interval 20
-> no ip multicast vlan 100 update-delay-interval
-> ip multicast service 20 update-delay-interval 20
-> no ip multicast service 20 update-delay-interval

**Release History**

Release 8.3.1; command was introduced.
Release 8.4.1.R02; service parameter added.

**Related Commands**

- `show ip multicast` Displays the IP Multicast Switching and Routing status and general configuration parameters.

**MIB Objects**

- `alaIpmsConfigTable`
  - `alaIpmsConfigType`
  - `alaIpmsConfigAddressType`
  - `alaIpmsConfigValue`
  - `alaIpmsConfigUpdateDelayInterval`
**ip multicast fast-join**

Configures whether or not IP Multicast Switching will automatically create the forwarding entries in hardware as soon as the IGMP memberships are learned on the specified VLAN, Shortest Path Bridging (SPB) service or globally if no VLAN or SPB service is specified.

```plaintext
ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] fast-join [enable | disable]
no ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] fast-join
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]`: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs. *This parameter is supported only on the OmniSwitch 9900.*
- `service_id[-service_id2]`: SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `enable`: Enable the IGMP fast join functionality.
- `disable`: Disable the IGMP fast join functionality.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- This command applies only to IPv4 Multicast Switching. If IP Multicast Routing is enabled, then the routing configuration will override the fast join setting.
- When the IP Multicast Switching fast join functionality is enabled, convergence of multicast traffic may occur faster because the forwarding entries are already created before the actual multicast traffic is received.
- When the IP Multicast Switching fast join functionality is disabled (the default), forwarding entries are not created in the hardware until the multicast traffic reaches the switch.
• If the IP Multicast Switching fast join is already enabled on the system, then the VLAN or SPB service configuration will override the system's configuration.

• Use the no form of this command to restore the IP Multicast Switching fast join setting back to the default value (disabled) on the system or the specified VLAN or SPB service.

**Examples**

-> ip multicast fast-join enable
-> ip multicast fast-join disable
-> no ip multicast fast-join
-> ip multicast service 10 fast-join enable
-> ip multicast service 11-15 fast-join disable
-> no ip multicast service 10 fast-join
-> no ip multicast service 11-15 fast-join

**Release History**

Release 8.3.1.R02; command introduced.
Release 8.4.1.R02; **vlan** and **service** parameters added.

**Related Commands**

**show ip multicast** Displays the IP Multicast Switching and Routing status and general configuration parameters.

**MIB Objects**

alaIpmsConfigTable
alaIpmsConfigType
alaIpmsConfigAddressType
alaIpmsConfigValue
alaIpmsConfigFastJoin
ip multicast host-list

Configures a list of host IP addresses that is used for IP multicast group maps and SSM maps.

ip multicast host-list host_list_name ip_address [ip_address]
no ip multicast host-list host_list_name [ip_address]

Syntax Definitions

host_list_name  A name to assign to the host list (up to 20 characters).
ip_address  The IP address to add to the host list. Multiple IP addresses can be entered on the same command line.

Defaults

N/A

Platforms Supported

Not supported in this release.

Usage Guidelines

• Use the no form of this command to remove an IP address from the list or remove the entire list from the switch configuration.

• When the entire list is removed, any configuration associated with the list is also removed.

Examples

-> ip multicast host-list group-map1 10.1.1.198
-> ip multicast host-list ssm-map1 20.0.0.1
-> ip multicast host-list ssm-map2 30.0.0.1 30.0.0.2 30.0.0.3
-> no ip multicast host-list ssm-map2 30.0.0.2
-> no ip multicast host-list group-map1

Release History

Release 8.3.1.R02; command was introduced.

Related Commands

show ip multicast host-list  Displays the IP multicast host address list configuration for the switch.

MIB Objects

alaIpmsHostListTable
alaIpmsHostListName
alaIpmsHostListAddressType
alaIpmsHostListAddress
ip multicast ssm-map

Configures the translation of Any Source Multicast (ASM) group memberships into Source Specific Multicast (SSM) group memberships on the specified VLAN or on the system if no VLAN is specified.

```
ip multicast [vlan vlan_id] ssm-map {group_address/prefixLen host_list_name | admin-state {enable | disable}}
no ip multicast [vlan vlan_id] ssm-map group_address/prefixLen
```

**Syntax Definitions**

- **vlan_id**: VLAN on which to apply the mapping configuration.
- **group_address[/prefixLen]**: The multicast group address/prefix length to map to the host list. If no prefix length is specified, then the default length of 32 is used.
- **host_list_name**: The name of a host list to use for SSM mapping.
- **enable**: Enables the SSM mapping.
- **disable**: Disables the SSM mapping.

**Defaults**

N/A

**Platforms Supported**

Not supported in this release.

**Usage Guidelines**

- Use the **no** form of this command to remove the SSM mapping configuration from the system or the specified VLAN.
- If an SSM mapping is already enabled on the system, then the VLAN configuration will override the system's configuration.

**Examples**

- `-> ip multicast ssm-map 229.10.10.10 hostList1`
- `-> ip multicast ssm-map admin-state enable`
- `-> ip multicast vlan 200 ssm-map 225.11.11.11 hostList2`
- `-> ip multicast vlan 200 ssm-map admin-state enable`
- `-> no ip multicast ssm-map 229.10.10.10`

**Release History**

Release 8.3.1.R02; command was introduced.
**Related Commands**

- `show ip multicast ssm-map` Displays the SSM mapping configuration.
- `show ip multicast` Displays the IP Multicast Switching and Routing status and general configuration parameters, such as the SSM mapping setting.

**MIB Objects**

- `alaIpmsSsmMapTable`  
  - `alaIpmsSsmMapConfigType`
  - `alaIpmsSsmMapConfigAddressType`
  - `alaIpmsSsmMapConfigValue`
  - `alaIpmsSsmMapGroupAddress`
  - `alaIpmsSsmMapGroupPrefixLength`
  - `alaIpmsSsmMapSourceListName`
ip multicast initial-packet-buffer admin-state

Enables or disables initial packet buffering for IPv4 multicast flows on the specified VLAN or globally on the switch.

```
ip multicast [vlan vlan_id[-vlan_id2]] initial-packet-buffer admin-state {enable | disable}
```

**Syntax Definitions**

- **vlan_id[-vlan_id2]**: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- **enable**: Enable the initial packet buffering globally on the switch.
- **disable**: Disable the initial packet buffering globally on the switch.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900V72/C32</th>
<th>6900</th>
<th>6900x48c6/t48c6/x48c4e/v48c8/c32e/t24c2/x24c2</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- When enabled, the following configuration is used for initial packet buffering on new multicast flows:
  - The maximum number of initial packets buffered per IPv4 multicast flow. Use the `ip multicast initial-packet-buffer max-packet` command to set this value.
  - The maximum number of IPv4 multicast flows that can be buffered. Use the `ip multicast initial-packet-buffer max-flow` command to set this value.
  - The maximum amount of time buffered packets are held if they are not sent out. Use the `ip multicast initial-packet-buffer timeout` command to set this value.
  - The minimum amount of time packets are held before delivery begins. Use the `ip multicast initial-packet-buffer min-delay` command to set this value.

- Configuring the status for initial packet buffering is supported only in the VLAN domain; the service domain is not supported.

**Examples**

- `-> ip multicast initial-packet-buffer admin-state disable`
- `-> ip multicast vlan 2 initial-packet-buffer admin-state enable`
- `-> ip multicast vlan 3-5 initial-packet-buffer admin-state enable`
**Release History**

Release 8.2.1; command introduced.
Release 8.4.1.R02; **vlan** parameter added.

**Related Commands**

- **show ip multicast** Displays the status and configuration parameters of initial multicast packet buffer for IPv4 flows on the system.

**MIB Objects**

alaIpmsConfigTable
- alaIpmsConfigType
- alaIpmsConfigAddressType
- alaIpmsConfigValue
- alaIpmsConfigInitialPacketBuffer
**ip multicast initial-packet-buffer max-packet**

Configures the maximum number of initial packets buffered per IPv4 multicast flow on the specified VLAN or globally on the switch.

```
ip multicast [vlan vlan_id[-vlan_id2]] initial-packet-buffer max-packet [num]
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `num` The maximum number of packets allowed to buffer per IPv4 multicast flow. Valid range is 1–10.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>num</td>
<td>4</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>V72/C32</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>X48C6/T48C6/X48C4E/V48C8/C32E/T24C2/X24C2</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- The configuration value set with this command is not applied unless initial packet buffering is administratively enabled for the switch.
- Configuring parameter values for initial packet buffering is supported only in the VLAN domain; the service domain is not supported.

**Examples**

- `ip multicast initial-packet-buffer max-packet 4`
- `ip multicast vlan 2 initial-packet-buffer max-packet 10`
- `ip multicast vlan 3-5 initial-packet-buffer max-packet 10`

**Release History**

Release 8.2.1; command introduced.
Release 8.4.1.R02; `vlan` parameter added.
**Related Commands**

- `ip multicast initial-packet-buffer admin-state` Enables or disables the initial packet buffering feature globally on the switch for IPv4 multicast flows.
- `show ip multicast` Displays the status and configuration parameters of initial multicast packet buffer for IPv4 flows on the system.

ip multicast initial-packet-buffer max-flow

Configures the maximum number of IPv4 multicast flows that can be buffered on the specified VLAN or globally on the switch.

```
ip multicast [vlan vlan_id[-vlan_id2]] initial-packet-buffer max-flow [num]
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `num` The maximum number of IPv4 multicast flows allowed for initial packet buffering. Valid range is 1–32.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>num</td>
<td>32</td>
</tr>
</tbody>
</table>

<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

Usage Guidelines

- If the buffered multicast packet is not sent out before the timeout, then the buffered packets will be removed from IPMS system.
- The configuration value set with this command is not applied unless initial packet buffering is administratively enabled for the switch.
- Configuring parameter values for initial packet buffering is supported only in the VLAN domain; the service domain is not supported.

Examples

-> ip multicast initial-packet-buffer timeout 2
-> ip multicast vlan 2 initial-packet-buffer timeout 5
-> ip multicast vlan 3-5 initial-packet-buffer timeout t

Release History

Release 8.2.1; command introduced.
Release 8.4.1.R02; vlan parameter added.
### Related Commands

**ip multicast initial-packet-buffer admin-state**

Enables or disables the initial packet buffering feature globally on the switch, for IPv4 multicast flows.

**show ip multicast**

Displays the status and configuration parameters of initial multicast packet buffer for IPv4 flows on the system.

### MIB Objects

alaIpmsConfigTable
- alaIpmsConfigType
- alaIpmsConfigAddressType
- alaIpmsConfigValue
- alaIpmsConfigInitialPacketBufferTimeout
**ip multicast initial-packet-buffer min-delay**

Configures the minimum delay to program the multicast replication index for IPv4 multicast flows buffered for initial packet on the specified VLAN or globally on the switch.

**ip multicast [vlan vlan_id[-vlan_id2]] initial-packet-buffer min-delay [milliseconds]**

---

**Syntax Definitions**

- **vlan_id[-vlan_id2]**: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- **milliseconds**: The minimum delay value to program the multicast replication index for IPv4 multicast flows buffered for initial packet. Valid range is 0–1000.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>milliseconds</td>
<td>0</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td></td>
</tr>
</tbody>
</table>

**Usage Guidelines**

*Note.* This command configures a timer to delay the programming of multicast replication index in hardware which might increase the number of multicast packets lost during the learning phase.

- The configuration value set with this command is not applied unless initial packet buffering is administratively enabled for the switch.

- Configuring parameter values for initial packet buffering is supported only in the VLAN domain; the service domain is not supported.

**Examples**

- -> ip multicast initial-packet-buffer min-delay 200
- -> ip multicast vlan 2 initial-packet-buffer min-delay 200
- -> ip multicast vlan 3-5 initial-packet-buffer min-delay 200
**Release History**

Release 8.2.1; command introduced.
Release 8.4.1.R02; `vlan` parameter added.

**Related Commands**

- `ip multicast initial-packet-buffer admin-state`  
  Enables or disables the initial packet buffering feature globally on the switch for IPv4 multicast flows.

- `show ip multicast`  
  Displays the status and configuration parameters of initial multicast packet buffer for IPv4 flows on the system.

**MIB Objects**

- `alaIpmsConfigAddressType`  
- `alaIpmsConfigValue`  
- `alaIpmsConfigInitialPacketBufferMinDelay`
ip multicast display-interface-names

Sets the display output of the *show* commands listed below. When enabled, the display outputs for these commands will show the IP interface name for each VLAN associated with the IP multicast table entry.

```
ip multicast display-interface-names
no ip multicast display-interface-names
```

**Syntax Definitions**

N/A

**Defaults**

By default, this function is disabled. The display format is set to include the VLANs that are associated with the IP multicast source and forward flows.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6/</th>
<th>6900 X48C4E/V48C8/</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the *no* form of this command to revert back to displaying the VLAN name.
- If there are any VLANs that are not configured with an IP interface or the IP interface is disabled, the output display will still include the VLAN when this function is enabled.
- This command may be helpful when reviewing output from multicast snooping commands and comparing state in multicast routing, which only interacts with IP interfaces.
- Enabling the display interface names option applies to the following *show* commands:
  
  ```
  show ip multicast forward
  show ip multicast neighbor
  show ip multicast querier
  show ip multicast group
  show ip multicast source
  show ip multicast tunnel
  ```

- The command examples provided display the *show ip multicast source* output after the display interface name function is turned on (enabled) and off (disabled).
Examples

-> ip multicast display-interface-name  
-> show ip multicast source

  Displays the IP Multicast Switching and Routing forwarding table entries.

**MIB Objects**

alaIpmsGlobalConfigTable
  - `alaIpmsGlobalConfigAddressType`
  - `alaIpmsGlobalConfigDisplayInterfaceNames`
**ip multicast inherit-default-vrf-config**

Configures whether or not the global IPMS configuration defined in the default VRF instance is applied to all VRF instances.

**ip multicast inherit-default-vrf-config**

**no ip multicast inherit-default-vrf-config**

---

**Syntax Definitions**

N/A

**Defaults**

By default, the global IPMS configuration defined in the default VRF instance is applied to all VRF instances on the switch.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to disable this function. When disabled, the global IPMS configuration defined in the default VRF instance is not applied to all other VRF instances on the switch.

- When enabled (the default), additional VRF instances will inherit the global IPMS configuration defined in the default VRF instance.

- A global IPMS configuration defined for a specific non-default VRF instance takes precedence over the global IPMS configuration defined for the default VRF.

- Note that any per-VLAN IPMS configuration defined in a non-default VRF instance will show up as part of the default VRF instance in the configuration snapshot file. However, the functionality is still applied within the context of VRF instance in which the per-VLAN configuration was originally defined.

**Examples**

- `-> ip multicast inherit-default-vrf-config`
- `-> no ip multicast inherit-default-vrf-config`
Release History
Release 8.3.1; command introduced.

Related Commands

show ip multicast
Displays the status and configuration parameters of initial multicast packet buffer for IPv4 flows on the system.

MIB Objects
alaIpmsGlobalConfigTable
   alaIpmsGlobalConfigAddressType
   alaIpmsGlobalConfigInheritDefaultVrfConfig
ip multicast profile

Defines an IPMS profile that is used to apply a pre-defined configuration to the global IPMS instance (all VLAN and service instances) or to a specific VLAN or service instance. Using a configuration profile to configure IPMS functionality avoids having to configure each IPMS parameter with a separate CLI command.

This section describes the base command (ip multicast profile) along with optional command keywords that are used to configure IPMS parameter values that are applied when the profile is assigned to an IPMS instance. Optional keywords are listed separately but can be entered in combination on the same command line. Use the no form for the keywords to change a specific parameter value for the profile.

There is a “default” profile that defines a default set of IPMS parameter values that is automatically assigned to an IPMS instance. The default profile cannot be deleted, but the profile parameter values are configurable through this command.

ip multicast profile profile_name
    [admin-state {enable | disable}]
    [flood-unknown {enable | disable}]
    [version version]
    [robustness robustness]
    [querying {enable | disable}]
    [query-interval [seconds]]
    [query-response-interval [tenths-of-seconds]]
    [last-member-query-interval [tenths-of-seconds]]
    [unsolicited-report-interval [seconds]]
    [proxying {enable | disable}]
    [spoofing {enable | disable}]
    [spoofing static-source-ip ip_address]
    [zapping {enable | disable}]

    [initial-packet-buffer max-flow [num]]
    [initial-packet-buffer max-packet [num]]
    [initial-packet-buffer timeout [seconds]]
    [initial-packet-buffer min-delay [milliseconds]]

no ip multicast profile profile_name [admin-state | flood-unknown | version | robustness | ...]
**Syntax Definitions**

`profile_name` The name to associate with the IPMS profile.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove an IPMS profile from the switch configuration.
- To change the value of a specific profile parameter, specify the parameter keyword with this command. For example, `no ip multicast profile ipms-1 admin-state`, `ip multicast profile ipms-1 query-interval 100`, or `ip multicast profile ipms-1 querying enable`. The new parameter values are applied to all IPMS instances to which the profile is assigned.
- The profile name must already exist in the switch configuration before parameter values can be modified. Use this command to create the profile first, then configure the profile parameter values.
- For more information about specific profile parameter values, refer to the following explicit IPMS configuration commands for each profile parameter:

<table>
<thead>
<tr>
<th>Port Template Parameter</th>
<th>Explicit Port Configuration Command</th>
</tr>

  alaIpmsConfigProfileName
**ip multicast apply-profile**

Assigns the name of an existing IPMS configuration profile to the global IPMS instance (all VLANs and services) or to a specific VLAN or Shortest Path Bridging (SPB) service instance. An IPMS configuration profile defines parameter options that are applied to the IPMS instance to which the profile is assigned.

```
ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] apply-profile profile_name
```

```
no ip multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] apply-profile
```

### Syntax Definitions

- **vlan_id[-vlan_id2]**: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- **service_id[-service_id2]**: SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- **profile_name**: The name to associate with the IPMS profile.

### Defaults

There is a “default” profile that defines a default set of IPMS parameter values that is automatically assigned to an IPMS instance.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Support</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the **no** form of this command to revert the profile assignment back to the “default” profile.
- Specify a range of VLANs (**vlan 20-25**) or a range of SPB services (**service 10-15**) to apply the specified profile to multiple VLANs or services with one CLI command.
- The specified profile name must already exist in the switch configuration.

### Examples

- `-> ip multicast apply-profile “IGMPv3 with Zapping”`
- `-> ip multicast vlan 20 apply-profile “IGMPv3 with Zapping”`
- `-> ip multicast vlan 20-25 apply-profile “IGMPv3 with Zapping”`
- `-> ip multicast service 10 apply-profile “IGMPv3 with Zapping”`
- `-> ip multicast service 10-15 apply-profile “IGMPv3 with Zapping”`
- `-> no ip multicast apply-profile`
-> no ip multicast vlan 20 apply-profile
-> no ip multicast vlan 20-15 apply-profile
-> no ip multicast service 10 apply-profile
-> no ip multicast service 10-15 apply-profile

**Release History**

Release 8.4.1.R02; command was introduced.

**Related Commands**

**ipv6 multicast admin-state**

Enables or disables IPv6 Multicast Switching and Routing on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```
ipv6 multicast [vlan vlan_id1[-vlan_id2] | service service_id1[-service_id2]] admin-state [enable | disable]

no ipv6 multicast [vlan vlan_id1[-vlan_id2] | service service_id1[-service_id2]] admin-state
```

### Syntax Definitions

- **vlan_id1[-vlan_id2]**: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- **service_id1[-service_id2]**: SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.
- **enable**: Enable IPv6 Multicast Switching and Routing.
- **disable**: Disable IPv6 Multicast Switching and Routing.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- The configuration of an IPv6 multicast routing protocol on an IPv6 interface operationally triggers IP Multicast Switching and Routing functionality on any underlying VLAN or SPB service. This occurs regardless of any explicit IPMS configuration, such as attempting to specifically disable IPMS.
- If there is no IPv6 Multicast routing protocol already running on the switch, then the `ipv6 multicast admin-state` command alone controls IPMS operations.
- Enabling IPMS on individual VLANs or services, as needed, is recommended to conserve switch resources.
• If the IPv6 Multicast Switching and Routing is already enabled on the system, then the VLAN or SPB service configuration will override the system's configuration.

**Note.** Globally enabling the IPv6 Multicast Switching and Routing status for the switch only applies to the VLAN domain (does not apply to the service domain). As a result, IPv6 Multicast Switching and Routing must be explicitly enabled or disabled for each SPB service. However, globally disabling IPMS for all SPB services is supported.

• Use the `no` form of this command to restore the IPv6 Multicast Switching and Routing status back to the default value (disabled) on the system, the specified VLAN, or the specified SPB service.

**Examples**

```
-> ipv6 multicast admin-state enable
-> ipv6 multicast admin-state disable
-> no ipv6 multicast admin-state
-> ipv6 multicast vlan 2 admin-state enable
-> ipv6 multicast vlan 3-5 admin-state disable
-> no ipv6 multicast vlan 2 admin-state
-> no ipv6 multicast vlan 3-5 admin-state
-> ipv6 multicast service 10 admin-state enable
-> ipv6 multicast service 11-15 admin-state disable
-> no ipv6 multicast service 10 admin-state
-> no ipv6 multicast service 11-15 admin-state
```

**Release History**

Release 7.1.1; command was introduced.
Release 8.4.1; `service` parameter added.

**Related Commands**

`show ipv6 multicast` Displays the IPv6 Multicast Switching and Routing status and general configuration parameters.

**MIB Objects**

```
alaIpmsConfigTable
  alaIpmsConfigType
  alaIpmsConfigAddressType
  alaIpmsConfigValue
  alaIpmsConfigStatus
```
**ipv6 multicast flood-unknown**

Enables or disables the flooding of initial unknown multicast traffic for the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified. When a traffic flow is first seen on a port, there is a brief period of time where traffic may get dropped before the forwarding information is calculated. When flooding unknown multicast traffic is enabled, no packets are dropped before the forwarding information is available.

```bash
ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] flood-unknown [enable | disable]
```

```bash
no ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] flood-unknown
```

### Syntax Definitions

- `vlan_id[-vlan_id2]`: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]`: SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.
- `enable`: Enable flooding of unknown traffic until it is learned.
- `disable`: Disable flooding of unknown traffic.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- If this command function is enabled after the system is up and running, the flooding of unknown multicast traffic only applies to new flows.
- On an OmniSwitch 6860, OmniSwitch 6865, and OmniSwitch 6900:
  - Configuring the flood unknown status for any VLAN enforces the flood unknown behavior globally across all VLANs. The IPv4 multicast version of this command (`ip multicast flood-unknown`), however, enforces the flood unknown behavior at the per-VLAN level.
  - IPv6 multicast snooping for VLANs does not snoop ff02::/64 and the traffic is allowed to flood...
even if the flooding of unknown multicast traffic is disabled. Avoid using any multicast groups that map to the excluded IPv6 addresses.

- When IPv6 multicast snooping is enabled for any service, the flooding of unknown multicast traffic is unconditionally enforced for all snooping services; this is the only supported flood unknown behavior for services.

- IPv6 multicast snooping for services does not snoop MAC addresses that fall within the range of 01:00:5e:00:00:00/40 and 33:33:00:00:00:00/40 and the traffic is allowed to flood even if the flooding of unknown multicast traffic is disabled. Avoid using any multicast groups that map to the excluded MAC addresses.

- On an OmniSwitch 9900, IPv6 multicast snooping for VLANs or services does not snoop ff02::/120 and the traffic is allowed to flood even if the flooding of unknown multicast traffic is disabled. Avoid using any multicast groups that map to these excluded IPv6 addresses.

- Use this command to provide an "open failure" strategy for when hardware resource conflicts or software limits prevent the traffic from being registered in the fast path.

- Use the no form of this command to restore the flooding of unknown traffic back to the default value (disabled) on the system.

Examples

-> ipv6 multicast flood-unknown enable
-> ipv6 multicast flood-unknown disable
-> no ipv6 multicast flood-unknown
-> ipv6 multicast vlan 100 flood-unknown enable
-> ipv6 multicast vlan 101-105 flood-unknown enable
-> ipv6 multicast vlan 100 flood-unknown disable
-> no ipv6 multicast vlan 100 flood-unknown
-> no ipv6 multicast vlan 101-105 flood-unknown
-> ipv6 multicast service 10 flood-unknown enable
-> ipv6 multicast service 11-15 flood-unknown enable
-> ipv6 multicast service 10 flood-unknown disable
-> no ipv6 multicast service 10 flood-unknown
-> no ipv6 multicast service 11-15 flood-unknown

Release History

Sets the default version of the MLD protocol on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```
ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] version [version]
no ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] version
```

**Syntax Definitions**

- `vlan vlan_id[-vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]` SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.
- `version` Default MLD protocol version to run. Valid entries are 1 or 2.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>version</td>
<td>1</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>

<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- IPv6 Multicast Switching and Routing must be enabled to set the default MLD protocol version on the system and/or the specified VLANs. or SPB services.
- If the default MLD protocol version is already configured on the system, then the VLAN or SPB service configuration will override the system's configuration.
- Due to protocol inter-operation requirements, this command specifies only a default version of the MLD protocol to run.
- Use the `no` form of this command to restore the MLD multicast version back to the default value (version 1) on the system, the specified VLAN, or the specified SPB service. In addition, specifying a value of 0 with this command also restores the default value (for example, ipv6 multicast version 0).
**Examples**

- `ipv6 multicast version 2`
- `ipv6 multicast version 0`
- `no ipv6 multicast version`
- `ipv6 multicast vlan 2 version 2`
- `ipv6 multicast vlan 3-5 version 2`
- `ipv6 multicast vlan 2 version 0`
- `no ipv6 multicast vlan 2 version`
- `ipv6 multicast vlan 3-5 version`
- `ipv6 multicast service 2 version 3`
- `ipv6 multicast service 3-5 version 3`
- `ipv6 multicast service 2 version 0`
- `no ipv6 multicast service 2 version`
- `no ipv6 multicast service 3-5 version`

**Release History**

Release 7.1.1; command was introduced.
Release 8.4.1; `service` parameter added.

**Related Commands**

`show ipv6 multicast` Displays the IPv6 Multicast Switching and Routing status and general configuration parameters.

**MIB Objects**

`alaIpmsConfigTable`
  `alaIpmsConfigType`
  `alaIpmsConfigAddressType`
  `alaIpmsConfigValue`
  `alaIpmsConfigVersion`
**ipv6 multicast port max-group**

Configures the maximum group limit learned per port. The limit is applicable on the given port for all VLAN instances or all SPB service instances of the port.

```
ipv6 multicast {port chassis/slot/port | sap port sap_id} max-group [num] [action {none | drop | replace}]
```

**Syntax Definitions**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>chassis</td>
<td>The chassis identifier.</td>
</tr>
<tr>
<td>slot/port</td>
<td>The slot and port number (3/1).</td>

</tbody>
</table>

**Usage Guidelines**

- If group memberships are already registered on a port/VLAN or SAP port/SPB service instance and the group limit is set to a lower value for the instance, the current group memberships are not removed until they expire. The effect of the new lower group limit value is applied when one of the following occurs to help avoid any undetermined behavior:
  - IP multicast memberships are aged out on a port/VLAN or SAP port/SPB service instance.
  - IP multicast memberships are pruned by a leave or when IP multicast is disabled on the specific VLAN or SPB service or globally disabled for the switch.
The configuration is allowed even when the IP multicast status is disabled.

If the `num` and `action` parameters are not specified, then the limit is removed.

When using the `sap port` parameter with this command, specify a SAP ID by entering the access port number followed by the encapsulation value (for example, `ip multicast sap port 1/1/23:10 max-group 10 action drop`, where `1/1/23:10` is the SAP ID).

A SAP ID is comprised of an access port and an encapsulation value. For example, the SAP ID for access port `1/1/23` with VLAN 10 encapsulation is `1/1/23:10`. Any traffic received on port `1/1/23` that is tagged with VLAN 10 is mapped to the SPB service that is associated with the `1/1/23:10` SAP ID. Refer to Chapter 10, “Service Manager Commands,” for more information.

The maximum group configuration on a port will override the VLAN, SPB service, or global configuration.

MLD zapping must be enabled when the maximum group limit is enabled and the action is dropped.

The maximum group configuration is applied in the following order of precedence (listed from highest to lowest precedence):
- Group limit configured for a port or an SPB SAP port.
- Group limit configured for a specific VLAN or SPB service.
- Group limit configured for the IPMS profile assigned to a VLAN or SPB service.
- Group limit configured for a VLAN or SPB service within a specific VRF context.
- Group limit configured for the IPMS profile assigned to a VLAN or SPB service within a specific VRF context.

**Examples**

```bash
-> ipv6 multicast port 1/1/12 max-group 10 action drop
-> ipv6 multicast port 1/1/14 max-group action replace
-> ipv6 multicast port 1/1/14 max-group
-> ipv6 multicast sap port 1/1/23:10 max-group 10 action drop
-> ipv6 multicast sap port 1/1/26:20.200 max-group 20 action replace
-> ipv6 multicast sap port 1/1/16:20.200 max-group
```

**Release History**

Release 7.1.1; command was introduced.
Release 8.4.1; `sap port` parameter added.

**Related Commands**

- `show ipv6 multicast` Displays the IPv6 Multicast Switching and Routing status and general configuration parameters.
- `show ipv6 multicast port` Displays the maximum group configuration for VLAN ports or SPB service SAP ports.

**MIB Objects**

- `alaIpmsIntfTable`  
- `alaIpmsIntfConfigType`  
- `alaIpmsIntfAddressType`  
- `alaIpmsIntfMaxGroupLimit`
alaIpmsIntfMaxGroupExceedAction
**ipv6 multicast max-group**

Configures the maximum group limit learned per port for the specified VLAN, Shortest Path Bridging (SPB) service, or per port on the system if no VLAN or SPB service is specified. The limit is applied to each port that is a member of the given VLAN or SPB service and the specified action is taken when the limit is exceeded.

```
ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] max-group [num] [action {none | drop | replace}]
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]` SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.
- `num` The maximum MLD group count. Valid range is 0–4294967295.
- `none` Disables the maximum group limit configuration.
- `drop` Drops the incoming membership request.
- `replace` Replaces an existing membership with the incoming membership request.

**Defaults**

By default, the max-group limit is set to zero.

<table>
<thead>
<tr>
<th>parameter</th>
<th>defaults</th>
</tr>
</thead>
<tbody>
<tr>
<td>action</td>
<td>none</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- If a VLAN or SPB service is not specified, this command configures the global maximum group limit applied to all VLAN ports and SPB Service Access Point (SAP) ports.
- If a VLAN is specified, this command configures the maximum group limit learned per port on a VLAN. The limit is applied to each port that is a member of the given VLAN.
If an SPB service is specified, this command configures the maximum group limit learned per port on an SPB service. The limit is applied to each port that is a member of the given SPB service.

Configuring a maximum group value will have no affect on existing group memberships until the memberships are refreshed on the port/VLAN or port/SPB service instance.

The configuration of a maximum group limit is allowed even when the IP multicast status is disabled.

If the `num` and `action` parameters are not specified, then the limit is removed.

The maximum group configuration on a VLAN or SPB service will override the global configuration.

The maximum group configuration is applied in the following order of precedence (listed from highest to lowest precedence):
- Group limit configured for a port or an SPB SAP port.
- Group limit configured for a specific VLAN or SPB service.
- Group limit configured for the IPMS profile assigned to a VLAN or SPB service.
- Group limit configured for a VLAN or SPB service within a specific VRF context.
- Group limit configured for the IPMS profile assigned to a VLAN or SPB service within a specific VRF context.

MLD zapping must be enabled when the max-group limit is enabled and the action is dropped.

**Examples**

```
-> ipv6 multicast max-group 10 action drop
-> ipv6 multicast max-group 20 action replace
-> ipv6 multicast max-group
-> ipv6 multicast vlan 10 max-group 10 action drop
-> ipv6 multicast vlan 20 max-group action drop
-> ipv6 multicast vlan 11-15 max-group 10 action replace
-> ipv6 multicast service 5 max-group 10 action drop
-> ipv6 multicast service 20 max-group action drop
-> ipv6 multicast service 10-15 max-group 10 action replace
-> ipv6 multicast service 5 max-group
-> ipv6 multicast service 10-15 max-group
```

ipv6 multicast static-neighbor

Creates a static MLD neighbor entry on the specified port for the specified VLAN or on the specified Service Access Point (SAP) port for the specified Shortest Path Bridging (SPB) service.

ipv6 multicast static-neighbor vlan vlan_id {port chassis/slot/port | linkagg agg_id}
ipv6 multicast static-neighbor service service_id sap {port | linkagg} {sap_id}

no ipv6 multicast static-neighbor vlan vlan_id {port chassis/slot/port | linkagg agg_id}
no ipv6 multicast static-neighbor service service_id sap {port | linkagg} {sap_id}

---

Syntax Definitions

- **vlan_id**: VLAN to include as a static MLD neighbor.
- **chassis**: The chassis identifier.
- **slot/port**: The slot and port number to configure as a static MLD neighbor.
- **agg_id**: The link aggregate to configure as a static MLD neighbor.
- **service_id**: SPB service ID to include as a static MLD neighbor. The valid range is 1–32767. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.
- **sap_id**: The SAP ID (chassis/slot/port:encapsulation). This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.

---

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the **no** form of this command to remove an MLD static neighbor entry on the specified port for the specified VLAN or on the specified SAP port for the specified SPB service.
- Creating an MLD static neighbor entry on the specified port/VLAN or the specified SAP port/service, enables that network segment to receive all of the MLD traffic and IPv6 multicast traffic.
- To create an MLD static neighbor entry on a link aggregate, use the **linkagg** parameter (for example, ipv6 multicast static-neighbor vlan 2 linkagg 7 or ipv6 multicast static-neighbor service 10 sap linkagg 10:100).
• When using the `sap port` parameter with this command, specify a SAP ID by entering the access port number followed by the encapsulation value (for example, ipv6 multicast static-neighbor service 10 sap port 1/1/23:10, where 1/1/23:10 is the SAP ID).

• A SAP ID is comprised of an access port and an encapsulation value. For example, the SAP ID for access port 1/1/23 with VLAN 10 encapsulation is 1/1/23:10. Any traffic received on port 1/1/23 that is tagged with VLAN 10 is mapped to the SPB service that is associated with the 1/1/23:10 SAP ID. Refer to Chapter 10, “Service Manager Commands,” for more information.

**Examples**

```
-> ipv6 multicast static-neighbor vlan 4 port 1/1
-> no ipv6 multicast static-neighbor vlan 4 port 1/1
-> ipv6 multicast static-neighbor vlan 4 port 7
-> no ipv6 multicast static-neighbor vlan 4 port 7

-> ipv6 multicast static-neighbor service 10 sap port 1/1/2:100
-> no ipv6 multicast static-neighbor service 10 sap port 1/1/2:100
-> ipv6 multicast static-neighbor service 10 sap linkagg 10:100
-> no ipv6 multicast static-neighbor service 10 sap linkagg 10:100
```

**Release History**

Release 7.1.1; command was introduced.
Release 7.3.1; `linkagg` parameter was added.
Release 8.4.1; `service` and `sap` parameters added.

**Related Commands**

`show ipv6 multicast neighbor` Displays the MLD neighbor table entries of IPv6 Multicast Switching and Routing.

**ipv6 multicast static-querier**

Creates a static MLD querier entry on the specified port for the specified VLAN or on the specified Service Access Point (SAP) port for the specified Shortest Path Bridging (SPB) service.

```
ipv6 multicast static-querier vlan vlan_id {port chassis/slot/port | linkagg agg_id}
ipv6 multicast static-querier service service_id sap {port | linkagg} {sap_id}
```

```
no ipv6 multicast static-querier vlan vlan_id {port chassis/slot/port | linkagg agg_id}
no ipv6 multicast static-querier service service_id sap {port | linkagg} {sap_id}
```

**Syntax Definitions**

- `vlan_id`: VLAN to include as a static MLD querier.
- `chassis`: The chassis identifier.
- `slot/port`: The slot and port number to configure as a static MLD querier.
- `agg_id`: The link aggregate to configure as a static MLD querier.
- `service_id`: SPB service ID to include as a static MLD querier. The valid range is 1–32767. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.
- `sap_id`: The SAP ID (chassis/slot/port:encapsulation). This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>

</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove an MLD static querier entry on the specified port for the specified VLAN or on the specified SAP port for the specified SPB service.
- Creating an MLD static querier entry on the specified port/VLAN or the specified SAP port/service, enables that network segment to receive all of the MLD traffic.
- To create an MLD static querier entry on a link aggregate, use the `linkagg` parameter (for example, `ipv6 multicast static-querier vlan 2 linkagg 7` or `ipv6 multicast static-querier service 10 sap linkagg 10:100`).
• When using the sap port parameter with this command, specify a SAP ID by entering the access port number followed by the encapsulation value (for example, ipv6 multicast static-neighbor service 10 sap port 1/1/23:10, where 1/1/23:10 is the SAP ID).

• A SAP ID is comprised of an access port and an encapsulation value. For example, the SAP ID for access port 1/1/23 with VLAN 10 encapsulation is 1/1/23:10. Any traffic received on port 1/1/23 that is tagged with VLAN 10 is mapped to the SPB service that is associated with the 1/1/23:10 SAP ID. Refer to Chapter 10, “Service Manager Commands,” for more information.

Examples

-> ipv6 multicast static-querier vlan 4 port 1/1
-> no ipv6 multicast static-querier vlan 4 port 1/1
-> ipv6 multicast static-querier vlan 4 port 7
-> no ipv6 multicast static-querier vlan 4 port 7

-> ipv6 multicast static-querier service 10 sap port 1/1/2:100
-> no ipv6 multicast static-querier service 10 sap port 1/1/2:100
-> ipv6 multicast static-querier service 10 sap linkagg 10:100
-> no ipv6 multicast static-querier service 10 sap linkagg 10:100

Release History

Release 7.1.1; command was introduced.
Release 7.3.1; linkagg parameter was added.
Release 8.4.1; service and sap parameters added.

Related Commands

alaIpmnStaticQuerierRowStatus
**ipv6 multicast static-group**

Creates a static MLD group entry on the specified port for the specified VLAN or on the specified Service Access Point (SAP) port for the specified Shortest Path Bridging (SPB) service.

```plaintext
ipv6 multicast static-group ipv6_address vlan vlan_id {port chassis/slot/port | linkagg agg_id}
ipv6 multicast static-group ipv6_address service service_id sap {port | linkagg} {sap_id}
no ipv6 multicast static-group ipv6_address vlan vlan_id {port chassis/slot/port | linkagg agg_id}
no ipv6 multicast static-group ipv6_address service service_id sap {port | linkagg} {sap_id}
```

**Syntax Definitions**

- `ipv6_address`: IPv6 multicast group address.
- `vlan_id`: VLAN to include as a static MLD group.
- `chassis`: The chassis identifier.
- `slot/port`: The slot and port number to configure as a static MLD group.
- `agg_id`: The link aggregate to configure as a static MLD group.
- `service_id`: SPB service ID to include as a static MLD group. The valid range is 1–32767. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `sap_id`: The SAP ID (chassis/slot/port:encapsulation). *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove an MLD static group entry on the specified port for the specified VLAN or on the specified SAP port for the specified SPB service.

- Creating an MLD static group entry on the specified port/VLAN or the specified SAP port/service, enables that network segment to receive MLD traffic addressed to the specified IP multicast group address.
To create an MLD static group entry on a link aggregate, use the `linkagg` parameter (for example, `ipv6 multicast static-group 225.0.0.1 vlan 2 linkagg 7` or `ipv6 multicast static-group 225.0.0.1 service 10 sap linkagg 10:100`).

When using the `sap port` parameter with this command, specify a SAP ID by entering the access port number followed by the encapsulation value (for example, `ipv6 multicast static-querier service 10 sap port 1/1/23:10`, where `1/1/23:10` is the SAP ID).

A SAP ID is comprised of an access port and an encapsulation value. For example, the SAP ID for access port `1/1/23` with VLAN `10` encapsulation is `1/1/23:10`. Any traffic received on port `1/1/23` that is tagged with VLAN `10` is mapped to the SPB service that is associated with the `1/1/23:10` SAP ID. Refer to Chapter 10, “Service Manager Commands,” for more information.

**Examples**

```
-> ipv6 multicast static-group ff05::4681 vlan 4 port 1/1
-> no ipv6 multicast static-group ff05::4681 vlan 4 port 1/1
-> ipv6 multicast static-group ff05::4681 vlan 4 port 7
-> no ipv6 multicast static-group ff05::4681 vlan 4 port 7

-> ipv6 multicast static-group 229.10.10.10 service 10 sap port 1/1/2:100
-> no ipv6 multicast static-group 229.10.10.10 service 10 sap port 1/1/2:100
-> ipv6 multicast static-group 225.11.11.11 service 10 sap linkagg 10:100
-> no ipv6 multicast static-group 225.11.11.11 service 10 sap linkagg 10:100
```

**Release History**

Release 7.1.1; command was introduced.
Release 7.3.1; `linkagg` parameter was added.
Release 8.4.1; `service` and `sap` parameters added.

**Related Commands**

- `show ipv6 multicast group` Displays the MLD group membership table entries of IPv6 Multicast Switching and Routing for the specified IPv6 multicast group address or all entries if no IPv6 multicast group address is specified.

**MIB Objects**

```
alaIpmsStaticMemberTable
   alaIpmsStaticMemberConfigType
   alaIpmsStaticMemberAddressType
   alaIpmsStaticMemberValue
   alaIpmsStaticMemberIfIndex
   alaIpmsStaticMemberSubValue
   alaIpmsStaticMemberGroupAddress
   alaIpmsStaticMemberRowStatus
```
**ipv6 multicast query-interval**

Sets the MLD query interval on the specified VLAN, Shortest Path Bridging (SPB), or on the system if no VLAN or SPB service is specified.

```
ipv6 multicast [vlan vlan_id|-vlan_id2] | service service_id|-service_id2] query-interval [seconds]
no ipv6 multicast [vlan vlan_id|-vlan_id2] | service service_id|-service_id2] query-interval
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]` SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.
- `seconds` MLD query interval in seconds. Valid range is 1–65535.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>125</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- IPv6 Multicast Switching and Routing must be enabled to set the MLD query interval on the system and/or the specified VLANs or SPB services.
- If the MLD query interval is already configured on the system, then the VLAN or SPB service configuration will override the system's configuration.
- The MLD query interval refers to the time period between MLD query messages.
- Due to protocol inter-operation requirements, this command specifies only a default version of the MLD query interval to use.
- Use the **no** form of this command to restore the MLD query interval back to the default value (125 seconds) on the system, the specified VLAN, or the specified SPB service. In addition, specifying a
value of 0 with this command also restores the default value (for example, `ipv6 multicast query-interval 0`).

**Examples**

- `ipv6 multicast query-interval 100`
- `ipv6 multicast query-interval 0`
- `no ipv6 multicast query-interval`
- `ipv6 multicast vlan 2 query-interval 100`
- `ipv6 multicast vlan 3-5 query-interval 100`
- `ipv6 multicast vlan 2 query-interval 0`
- `no ipv6 multicast vlan 2 query-interval`
- `no ipv6 multicast vlan 3-5 query-interval`
- `ipv6 multicast service 2 query-interval 100`
- `ipv6 multicast service 3-5 query-interval 100`
- `ipv6 multicast service 2 query-interval 0`
- `no ipv6 multicast service 2 query-interval`
- `no ipv6 multicast service 3-5 query-interval`

**Release History**

Release 7.1.1; command was introduced.
Release 8.4.1; `service` parameter added.

**ipv6 multicast last-member-query-interval**

Sets the MLD last member query interval on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or service is specified.

```
ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] last-member-query-interval [milliseconds]
```

```
no ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] last-member-query-interval
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]` SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `milliseconds` MLD last member query interval in milliseconds. Valid range is 1–65535.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>milliseconds</code></td>
<td>1000</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
</tr>
</thead>
<tbody>
<tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- IPv6 Multicast Switching and Routing must be enabled to set the MLD last member query interval to use on the system and/or the specified VLANs or SPB services.
- If the MLD last member query interval is already configured on the system, then the VLAN or SPB service configuration will override the system's configuration.
- The MLD last member query interval refers to the time period to reply to an MLD query message sent in response to a leave group message.
- Use the `no` form of this command to restore the MLD last member query interval back to the default value (1000 milliseconds) on the system, the specified VLAN, or the specified SPB service.
addition, specifying a value of 0 with this command also restores the default value (for example, `ipv6 multicast last-member-query-interval 0`).

**Examples**

```
-> ipv6 multicast last-member-query-interval 2200
-> ipv6 multicast last-member-query-interval 0
-> no ipv6 multicast last-member-query-interval
-> ipv6 multicast vlan 4 last-member-query-interval 2200
-> ipv6 multicast vlan 3-5 last-member-query-interval 2200
-> ipv6 multicast vlan 4 last-member-query-interval 0
-> no ipv6 multicast vlan 4 last-member-query-interval
-> ipv6 multicast vlan 3-5 last-member-query-interval
-> ipv6 multicast service 2 last-member-query-interval 2200
-> ipv6 multicast service 3-5 last-member-query-interval 2200
-> ipv6 multicast service 2 last-member-query-interval 0
-> no ipv6 multicast service 2 last-member-query-interval
-> no ipv6 multicast service 3-5 last-member-query-interval
```

**Release History**

**ipv6 multicast unsolicited-report-interval**

Sets the value of the MLD unsolicited report interval on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```
ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] unsolicited-report-interval [seconds]
```

```
no ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] unsolicited-report-interval
```

### Syntax Definitions

- `vlan_id[-vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]` SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `seconds` MLD unsolicited report interval in seconds. Valid range is 1–65535, where 0 represents the default setting.

### Defaults

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>1</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

### Usage Guidelines

- IPv6 Multicast Switching and Routing must be enabled to set the MLD unsolicited report interval to use on the system and/or the specified VLANs or SPB services.
- If the MLD unsolicited report interval is already configured on the system, then the VLAN or SPB service configuration will override the system's configuration.
- The unsolicited report interval refers to the time period to proxy any changed MLD membership state.
- Use the `no` form of this command to restore the MLD unsolicited report interval back to the default value (1 second) on the system, the specified VLAN, or the specified SPB service. In addition,
specifying a value of 0 with this command also restores the default value (for example, `ipv6 multicast unsolicited-report-interval 0`).

**Examples**

```
-> ipv6 multicast unsolicited-report-interval 20000
-> ipv6 multicast unsolicited-report-interval 0
-> no ipv6 multicast unsolicited-report-interval
-> ipv6 multicast vlan 2 unsolicited-report-interval 20000
-> ipv6 multicast vlan 3-5 unsolicited-report-interval 20000
-> ipv6 multicast vlan 2 unsolicited-report-interval 0
-> no ipv6 multicast vlan 2 unsolicited-report-interval
-> ipv6 multicast vlan 3-5 unsolicited-report-interval 0
-> no ipv6 multicast vlan 2 unsolicited-report-interval
-> ipv6 multicast service 2 unsolicited-report-interval 300
-> ipv6 multicast service 3-5 unsolicited-report-interval 300
-> ipv6 multicast service 2 unsolicited-report-interval 0
-> no ipv6 multicast service 2 unsolicited-report-interval
-> no ipv6 multicast service 3-5 unsolicited-report-interval
```

**Release History**

ipv6 multicast querying

Enables or disables MLD querying on the specified VLAN or on the system if no VLAN is specified.

```
ipv6 multicast [vlan vlan_id[-vlan_id2]] querying [{enable | disable}] [static-source-ip ipv6_address]
no ipv6 multicast [vlan vlan_id[-vlan_id2]] querying [static-source-ip]
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]`: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `enable`: Enable MLD querying.
- `disable`: Disable MLD querying.
- `ipv6_address`: A static source IPv6 address to use for MLD querying. *This parameter is not supported.*

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- IPv6 Multicast Switching and Routing must be enabled to enable MLD querying on the system and/or specified VLANs.
- If the MLD querying is already enabled/disabled on the system, then the VLAN configuration will override the system's configuration.
- MLD querying refers to requesting the network's MLD group membership information by sending out MLD queries. MLD querying also involves participating in MLD querier election.
- Use the `no` form of this command to restore the MLD querying status to the default value (disabled) on the system or the specified VLAN.

**Examples**

```
-> ipv6 multicast querying enable
-> ipv6 multicast querying disable
```
-> no ipv6 multicast querying
-> ipv6 multicast vlan 2 querying enable
-> ipv6 multicast vlan 3-5 querying disable
-> no ipv6 multicast vlan 2 querying
-> no ipv6 multicast vlan 3-5 querying

**Release History**

Release 7.1.1; command was introduced.
Release 8.3.1.R02; static-source-ip parameter added.

**Related Commands**

**ipv6 multicast robustness**

Sets the MLD robustness variable on the specified VLAN, Shortest Path Bridging (SPB) service or on the system if no VLAN or SPB service is specified.

```
ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] robustness [robustness]
no ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] robustness
```

### Syntax Definitions

- `vlan_id[-vlan_id2]`: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]`: SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `robustness`: MLD robustness variable. Valid range is 1–7.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>robustness</td>
<td>2</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- IPv6 Multicast Switching and Routing must be enabled to set the MLD robustness variable on the system and/or the specified VLANs or SPB services.

- If the MLD robustness variable is already configured on the system, then the VLAN or SPB service configuration will override the system's configuration.

- Robustness variable allows fine-tuning on the network, where the expected packet loss would be greater.

- Due to protocol inter-operation requirements, this command specifies only a default version of the MLD robustness variable to use.
Use the **no** form of this command to restore the MLD robustness variable back to the default value (2) on the system, the specified VLAN, or the specified SPB service. In addition, specifying a value of 0 with this command also restores the default value (for example, `ipv6 multicast robustness 0`).

**Examples**

```
-> ipv6 multicast robustness 3
-> ipv6 multicast robustness 0
-> no ipv6 multicast robustness
-> ipv6 multicast vlan 2 robustness 3
-> ipv6 multicast vlan 3-5 robustness 3
-> ipv6 multicast vlan 2 robustness 0
-> no ipv6 multicast vlan 2 robustness
-> no ipv6 multicast vlan 3-5 robustness
-> ipv6 multicast service 2 robustness 3
-> ipv6 multicast service 3-5 robustness 3
-> ipv6 multicast service 2 robustness 0
-> ipv6 multicast service 2 robustness
-> no ipv6 multicast service 3-5 robustness
```

**Release History**

Release 7.1.1; command was introduced.
Release 8.4.1; **service** parameter added.

### Usage Guidelines

- If the MLD spoofing is already enabled on the system, then the VLAN or SPB service configuration will override the system's configuration.
- MLD spoofing refers to replacing a client's MAC and IPv6 address with the system's MAC and IPv6 address when proxying aggregated MLD group membership information.
- By default, the source IPv6 address is not specified for spoofing; the system determines these addresses automatically. Optionally configure a static source IPv6 address to overcome the need for an IPv6 interface. If configured, the static source IPv6 is always used for spoofing, regardless of the IPv6 interface address or administrative state.
- Use the no form of this command to remove an MLD spoofing configuration and return the specified VLAN, SPB service, or system to the default behavior.
Examples

-> ipv6 multicast spoofing enable
-> ipv6 multicast spoofing disable
-> no ipv6 multicast spoofing
-> ipv6 multicast vlan 2 spoofing enable
-> ipv6 multicast vlan 3-5 spoofing disable
-> no ipv6 multicast vlan 2 spoofing
-> no ipv6 multicast vlan 3-5 spoofing
-> ipv6 multicast service 2 spoofing enable
-> ipv6 multicast service 3-5 spoofing disable
-> no ipv6 multicast service 2 spoofing
-> no ipv6 multicast service 3-5 spoofing

**ipv6 multicast spoofing static-source-ip**

Enables or disables MLD static spoofing on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```
ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] spoofing static-source-ip ipv6_address
```

```
no ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] spoofing static-source-ip
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]`  
  VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.

- `service_id[-service_id2]`  
  SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*

- `ipv6_address`  
  A static source IPv6 address to use for spoofing.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>defaults</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove a static source IP address.
- MLD spoofing refers to replacing a client's MAC and IPv6 address with the system's MAC and IPv6 address when proxying aggregated MLD group membership information.
- By default, the source IPv6 address is not specified for spoofing; the system determines these addresses automatically. Optionally configure a static source IPv6 address to overcome the need for an IPv6 interface. If configured, the static source IPv6 is always used for spoofing, regardless of the IPv6 interface address or administrative state.

**Examples**

```
-> ipv6 multicast spoofing static-source-ip 3333::1
```
-> no ipv6 ip multicast spoofing static-source-ip
-> ipv6 multicast vlan 2 spoofing static-source-ip 3333::1
-> ipv6 multicast vlan 3-5 spoofing static-source-ip 3333::1
-> no ipv6 ip multicast vlan 2 spoofing static-source-ip
-> no ipv6 multicast vlan 3-5 spoofing static-source-ip
-> ipv6 multicast service 2 spoofing static-source-ip 3333::1
-> no ipv6 multicast service 2 spoofing static-source-ip
-> ipv6 multicast service 3-5 spoofing static-source-ip 3333::1
-> no ipv6 multicast service 3-5 spoofing static-source-ip

**Release History**

**ipv6 multicast zapping**

Enables or disables MLD zapping on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```
ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] zapping [enable | disable]
no ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] zapping
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]` - VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]` - SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `enable` - Enable MLD zapping.
- `disable` - Disable MLD zapping.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- If the MLD zapping is already enabled on the system, then the VLAN or SPB service configuration will override the system's configuration.
- MLD zapping refers to processing membership and source filter removals immediately and not waiting for the protocol's specified time period. This mode facilitates IP TV applications looking for quick changes between IP multicast groups.
- Use the no form of this command to restore the MLD zapping status back to the default value (disabled) on the system, the specified VLAN, or the specified SPB service.

**Examples**

```
-> ipv6 multicast zapping enable
```
-> ipv6 multicast zapping disable
-> no ipv6 multicast zapping
-> ipv6 multicast vlan 2 zapping enable
-> ipv6 multicast vlan 3-5 zapping disable
-> no ipv6 multicast vlan 2 zapping
-> no ipv6 multicast vlan 3-5 zapping
-> ipv6 multicast service 2 zapping enable
-> ipv6 multicast service 3-5 zapping disable
-> no ipv6 multicast service 2 zapping
-> no ip multicast service 3-5 zapping

**Release History**

**ipv6 multicast querier-forwarding**

Enables or disables MLD querier forwarding on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```
ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] querier-forwarding [enable | disable]
```

```
no ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] querier-forwarding
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]`: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]`: SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.
- `enable`: Enable MLD querier forwarding.
- `disable`: Disable MLD querier forwarding.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- If the MLD querier forwarding is already enabled on the system, then the VLAN or SPB service configuration will override the system's configuration.
- MLD querier forwarding refers to promoting detected MLD queriers to receive all IP multicast data traffic.
- Use the `no` form of this command to restore the MLD querier forwarding status back to the default value (disabled) on the system, the specified VLAN, or the specified SPB service.

**Examples**

```
-> ipv6 multicast querier-forwarding enable
```
-> ipv6 multicast querier-forwarding disable
-> no ipv6 multicast querier-forwarding
-> ipv6 multicast vlan 2 querier-forwarding enable
-> ipv6 multicast vlan 3-5 querier-forwarding disable
-> no ipv6 multicast vlan 2 querier-forwarding
-> no ipv6 multicast vlan 3-5 querier-forwarding
-> ipv6 multicast service 2 querier-forwarding enable
-> ipv6 multicast service 3-5 querier-forwarding disable
-> no ipv6 multicast service 2 querier-forwarding
-> no ipv6 multicast service 3-5 querier-forwarding

**Release History**

Release 7.1.1; command was introduced.

**ipv6 multicast proxying**

Enables or disables MLD proxying on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```
ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] proxying [enable | disable]
no ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] proxying
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]` SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.
- `enable` Enable MLD proxying.
- `disable` Disable MLD proxying.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- If the MLD proxying is already enabled on the system, then the VLAN or SPB service configuration will override the system's configuration.
- MLD proxying refers to processing membership information on behalf of client systems and reporting membership on their behalf.
- Proxy reported MLD packets are sent using the source MAC address of the proxying switch. Unless the spoofing feature is used, proxy reported MLD packets will be sent using “::” for the IPv6 source address.
- Use the `no` form of this command to restore the MLD proxying status back to the default value (disabled) on the system, the specified VLAN, or the specified SPB service.
**Examples**

- `ipv6 multicast proxying enable`
- `ipv6 multicast proxying disable`
- `no ipv6 multicast proxying`
- `ipv6 multicast vlan 2 proxying enable`
- `ipv6 multicast vlan 3-5 proxying disable`
- `no ipv6 multicast vlan 2 proxying`
- `ipv6 multicast vlan 3-5 proxying`
- `ipv6 multicast service 2 proxying enable`
- `ipv6 multicast service 3-5 proxying disable`
- `no ipv6 multicast service 2 proxying`
- `no ipv6 multicast service 3-5 proxying`

**Release History**

Release 7.1.1; command was introduced.
Release 8.4.1; `service` parameter added.

**Related Commands**

ipv6 multicast helper-address

Specifies the destination IPv6 address of a relay host where MLD host Reports and Leave messages are sent.

```
ipv6 multicast [vlan vlan_id[-vlan_id2]] helper-address [ipv6_address]
no ipv6 multicast [vlan vlan_id[-vlan_id2]] helper-address
```

### Syntax Definitions

- `vlan_id[=vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `ipv6_address` The IPv6 address of the relay host.

### Defaults

By default, no destination IPv6 address is set.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- After the destination IPv6 address is specified, the IPMS reporting feature is enabled.
- An operational IPv6 interface is required for the receiving LAN before any MLD Reports and Leave messages can be relayed.
- Configuring a destination IPv6 helper address is supported only in the VLAN domain; the service domain is not supported.
- Use the `no` form of this command to restore the IPMS reporting feature back to the default value (no IPv6 helper address) on the system. When there is no IPv6 helper address set, the IPMS reporting feature is disabled.

### Examples

```
-> ipv6 multicast helper-address 3333::2
-> no ipv6 multicast helper-address
-> ipv6 multicast vlan 2 helper-address 3333::2
-> ipv6 multicast vlan 3-5 helper-address 3333::2
-> no ipv6 multicast vlan 2 helper-address
-> no ipv6 multicast vlan 3-5 helper-address
```
**Release History**

Release 8.4.1; command was introduced.
Release 8.4.1.R02; **vlan** parameter added.

ipv6 multicast zero-based-query

Configures the use of an all-zero source IPv6 address for MLD query packets when a non-querier is querying the membership of a port. This value is set for the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or service is specified.

```
ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] zero-based-query [enable | disable]
```

```
no ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] zero-based-query
```

### Syntax Definitions

- `vlan_id[-vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]` SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `enable` Enable MLD zero-based querying.
- `disable` Disable MLD zero-based querying.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- The MLD zero-based query status set for a specific VLAN or SPB service overrides the zero-based query status set for the system.
- Use the `no` form of this command to restore the MLD zero-based query status back to the default value (enabled) on the system, the specified VLAN, or the specified SPB service.

### Examples

- `ipv6 multicast zero-based-query enable`
- `ipv6 multicast zero-based-query disable`
- `no ipv6 multicast zero-based-query`
-> ipv6 multicast vlan 2 zero-based-query enable
-> ipv6 multicast vlan 3-5 zero-based-query disable
-> no ipv6 multicast vlan 2 zero-based-query
-> no ipv6 multicast vlan 3-5 zero-based-query
-> ipv6 multicast service 10 zero-based-query enable
-> ipv6 multicast service 11-15 zero-based-query disable
-> no ipv6 multicast service 10 zero-based-query
-> no ipv6 multicast service 11-15 zero-based-query disable

**Release History**

  alaIpmsConfigZeroBasedQuery
**ipv6 multicast forward-mode**

Configures the Layer 2 forwarding mode for IPv6 Multicast Switching (does not apply to IPv6 Multicast Routing). The forwarding mode is set for the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```
ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] forward-mode {asm | ssm | mac | auto}
```

```
no ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] forward-mode
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]` - VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]` - SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.
- `asm` - Sets the IPMSv6 forwarding mode to ASM (the bridge lookup is based on the packet group destination IPv6 address). This parameter is supported only in the VLAN domain; service domain is not supported.
- `ssm` - Sets the IPMSv6 forwarding mode to SSM (the bridge lookup is based on the packet source IPv6 as well as the group destination IPv6). This parameter is supported only in the VLAN domain; service domain is not supported.
- `mac` - Sets the IPMSv6 forwarding mode to MAC address (the bridge lookup is based on the MAC destination address).
- `auto` - Automatically determines the IPMSv6 forwarding mode based on the current MLD protocol version and the existing protocol state.

**Defaults**

By default, the forwarding mode is set to automatic.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>
Usage Guidelines

- The forwarding mode set for a specific VLAN or SPB service overrides the forwarding mode set for the system.

- If multicast routing is enabled on a VLAN, the following conditions apply:
  - On the OmniSwitch 9900, the bridging mode is independent of the routing mode. As a result, ASM bridging is allowed in a VLAN that has SSM routing configured or SSM bridging is allowed in a VLAN that has ASM routing configured.
  - Multicast routing is not supported on the OmniSwitch 6560 and OmniSwitch 6570M.
  - On all other OmniSwitch platforms, the routing configuration overrides the forwarding mode setting and determines the forwarding mode based on the group mappings. For example, BIDIR flows will use ASM while DVMRP flows and all other PIM modes will use SSM.

- Use the no form of this command to restore the Layer 2 forwarding mode back to the default value (automatic) on the system, the specified VLAN or SPB service.

Examples

```
-> ipv6 multicast forward-mode auto
-> ipv6 multicast forward-mode asm
-> ipv6 multicast forward-mode ssm
-> ipv6 multicast forward-mode mac
-> no ipv6 multicast forward-mode
-> ipv6 multicast vlan 100 forward-mode auto
-> ipv6 multicast vlan 101-104 forward-mode asm
-> ipv6 multicast vlan 100 forward-mode ssm
-> ipv6 multicast vlan 101-104 forward-mode mac
-> no ipv6 multicast vlan 100 forward-mode
-> no ipv6 multicast vlan 101-104 forward-mode
-> ipv6 multicast service 10 forward-mode mac
-> ipv6 multicast service 11-15 forward-mode mac
-> no ipv6 multicast service 10 forward-mode
-> no ipv6 multicast service 11-15 forward-mode
```

Release History

Release 8.3.1; command introduced.
Release 8.4.1.R02; service parameter added.

Related Commands

**ipv6 multicast update-delay-interval**

Sets the amount of time to delay IPv6 multicast forwarding updates on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

**Syntax**

```
ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] update-delay-interval milliseconds
```

```
no ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] update-delay-interval
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]` SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `milliseconds` The number of milliseconds to defer forwarding updates. Valid range is 0–10000.

**Defaults**

By default, the forwarding update delay interval is set to zero.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- When the forwarding update delay is set to zero, forwarding updates are processed immediately with minimal latency. Configuring a forwarding update delay value can limit the effects of persistent churn on the system.
- If the forwarding update delay interval is already configured on the system, then the VLAN or SPB service configuration will override the system's configuration.
- Use the `no` form of this command to restore the forwarding update delay interval back to the default value (zero) on the system or the specified VLAN or SPB service.

**Examples**

```
-> ipv6 multicast update-delay-interval 10
-> no ipv6 multicast update-delay-interval
```
-> ipv6 multicast vlan 100 update-delay-interval 20  
-> ipv6 multicast vlan 101-105 update-delay-interval 20  
-> no ipv6 multicast vlan 100 update-delay-interval 20  
-> no ipv6 multicast vlan 101-105 update-delay-interval  
-> ipv6 multicast service 20 update-delay-interval 20  
-> ipv6 multicast service 21-25 update-delay-interval 20  
-> no ipv6 multicast service 20 update-delay-interval  
-> no ipv6 multicast service 21-25 update-delay-interval

ipv6 multicast fast-join

Configures whether or not IPv6 Multicast Switching will automatically create the forwarding entries in hardware as soon as the MLD memberships are learned on the specified VLAN, Shortest Path Bridging (SPB) service or globally if no VLAN or SPB service is specified.

```
ipv6 multicast [vlan vlan_id[vlan_id2] | service service_id[service_id2]] fast-join [enable | disable]
no ipv6 multicast [vlan vlan_id[vlan_id2] | service service_id[service_id2]] fast-join
```

Syntax Definitions

- `vlan_id[vlan_id2]`: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs. *This parameter is supported only on the OmniSwitch 9900.*
- `service_id[service_id2]`: SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `enable`: Enable the MLD fast join functionality.
- `disable`: Disable the MLD fast join functionality.

Defaults

<table>

Usage Guidelines

- This command applies only to IPv6 Multicast Switching. If IPv6 Multicast Routing is enabled, then the routing configuration will override the fast join setting.
- When the IPv6 Multicast Switching fast join functionality is enabled, convergence of multicast traffic may occur faster because the forwarding entries are already created before the actual multicast traffic is received.
- When the IPv6 Multicast Switching fast join functionality is disabled (the default), forwarding entries are not created in the hardware until the multicast traffic reaches the switch.
• If the IPv6 Multicast Switching fast join is already enabled on the system, then the VLAN or SPB service configuration will override the system's configuration.

• Use the no form of this command to restore the IPv6 Multicast Switching fast join setting back to the default value (disabled) on the system or the specified VLAN or SPB service.

**Examples**

-> ipv6 multicast fast-join enable
-> ipv6 multicast fast-join disable
-> no ipv6 multicast fast-join
-> ip multicast service 10 fast-join enable
-> ip multicast service 11-15 fast-join disable
-> no ip multicast service 10 fast-join
-> no ip multicast service 11-15 fast-join

**Release History**

Release 8.3.1.R02; command introduced.
Release 8.4.1.R02; vlan and service parameters added.

**Related Commands**

`show ip multicast` Displays the IPv6 Multicast Switching and Routing status and general configuration parameters.

**MIB Objects**

alaIpmsConfigTable
alaIpmsConfigType
alaIpmsConfigAddressType
alaIpmsConfigValue
alaIpmsConfigFastJoin
**ipv6 multicast host-list**

Configures a list of host IP addresses that is used for IP multicast group maps and SSM maps.

```
ipv6 multicast host-list host_list_name ipv6_address [ipv6_address]
```

```
no ipv6 multicast host-list host_list_name [ipv6_address]
```

**Syntax Definitions**

- `host_list_name`: A name to assign to the host list (up to 20 characters).
- `ipv6_address`: The IPv6 address to add to the host list. Multiple IPv6 addresses can be entered on the same command line.

**Defaults**

N/A

**Platforms Supported**

Not supported in this release.

**Usage Guidelines**

- Use the `no` form of this command to remove an IPv6 address from the list or remove the entire list from the switch configuration.
- When the entire list is removed, any configuration associated with the list is also removed.

**Examples**

```
-> ipv6 multicast host-list group-map1 4444::2
-> ipv6 multicast host-list ssm-map1 4444::3
-> ipv6 multicast host-list ssm-map2 3333::2 3333::3 3333::4
-> no ipv6 multicast host-list ssm-map2 3333::3
-> no ipv6 multicast host-list group-map1
```

**Release History**

Release 8.3.1.R02; command was introduced.

**Related Commands**

- `show ipv6 multicast host-list`: Displays the IPv6 multicast host address list configuration.

**MIB Objects**

- `alaIpmsHostListTable`  
  - `alaIpmsHostListName`  
  - `alaIpmsHostListAddressType`  
  - `alaIpmsHostListAddress`
### ipv6 multicast ssm-map

Configures the translation of Any Source Multicast (ASM) group memberships into Source Specific Multicast (SSM) group memberships on the specified VLAN or on the system if no VLAN is specified.

```plaintext
ipv6 multicast [vlan vlan_id] ssm-map {group_address[/prefixLen] host_list_name | admin-state {enable | disable}}

no ipv6 multicast ssm-map group_address[/prefixLen]
```

#### Syntax Definitions

- **vlan_id**: VLAN on which to apply the mapping configuration.
- **group_address[/prefixLen]**: The multicast group address/prefix length to map to the host list. If no prefix length is specified, then the default length of 128 is used.
- **host_list_name**: The name of a host list to use for SSM mapping.
- **enable**: Enables the SSM mapping.
- **disable**: Disables the SSM mapping.

#### Defaults

N/A

#### Platforms Supported

Not supported in this release.

#### Usage Guidelines

- Use the `no` form of this command to remove the SSM mapping configuration.
- If an SSM mapping is already enabled on the system, then the VLAN configuration will override the system's configuration.

#### Examples

- `-> ipv6 multicast ssm-map ff05::5 hostList1`
- `-> ipv6 multicast ssm-map admin-state enable`
- `-> ipv6 multicast vlan 200 ssm-map ff05::6 hostList2`
- `-> ipv6 multicast vlan 200 ssm-map admin-state enable`
- `-> no ipv6 multicast ssm-map ff05::5`

#### Release History

Release 8.3.1.R02; command was introduced.
**Related Commands**

- `show ipv6 multicast ssm-map`  
  Displays the SSM mapping configuration.

- `show ipv6 multicast`  
  Displays the IPv6 Multicast Switching and Routing status and general configuration parameters, such as the global SSM mapping setting.

**MIB Objects**

- `alaIpmsSsmMapTable`
- `alaIpmsSsmMapConfigType`
- `alaIpmsSsmMapConfigAddressType`
- `alaIpmsSsmMapConfigValue`
- `alaIpmsSsmMapGroupAddress`
- `alaIpmsSsmMapGroupPrefixLength`
- `alaIpmsSsmMapSourceListName`
**ipv6 multicast initial-packet-buffer admin-state**

Enables or disables initial packet buffering for IPv6 multicast flows on the specified VLAN or globally on the switch.

```
ipv6 multicast [vlan vlan_id[-vlan_id2]] initial-packet-buffer admin-state {enable | disable}
```

### Syntax Definitions

`vlan_id[-vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.

`enable` Enable the initial packet buffering globally on the switch for IPv6 multicast flow.

`disable` Disable the initial packet buffering globally on the switch for IPv6 multicast flow.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- When enabled, the following configuration is used for initial packet buffering on new multicast flows:
  - The maximum number of initial packets buffered per IPv6 multicast flow. Use the `ipv6 multicast initial-packet-buffer max-packet` command to set this value.
  - The maximum number of IPv6 multicast flows that can be buffered. Use the `ipv6 multicast initial-packet-buffer max-flow` command to set this value.
  - The maximum amount of time buffered packets are held if they are not sent out. Use the `ipv6 multicast initial-packet-buffer timeout` command to set this value.
  - The minimum amount of time packets are held before delivery begins. Use the `ipv6 multicast initial-packet-buffer min-delay` command to set this value.
- Configuring the status for initial packet buffering is supported only in the VLAN domain; the service domain is not supported.
**Examples**

-> ipv6 multicast initial-packet-buffer admin-state disable
-> ipv6 multicast initial-packet-buffer admin-state enable
-> ipv6 multicast vlan 2 initial-packet-buffer admin-state enable
-> ipv6 multicast vlan 3-5 initial-packet-buffer admin-state enable

**Release History**

Release 8.2.1; command introduced.
Release 8.4.1.R02; `vlan` parameter added.

**Related Commands**

`show ipv6 multicast` Displays the status and configuration parameters of initial multicast packet buffer for IPv6 flows on the switch.

**MIB Objects**

alaIpmsConfigTable
   alaIpmsConfigType
   alaIpmsConfigAddressType
   alaIpmsConfigValue
   alaIpmsConfigInitialPacketBuffer
**ipv6 multicast initial-packet-buffer max-packet**

Configures the maximum number of initial packets buffered per IPv6 multicast flow on the specified VLAN or globally on the switch.

```
ipv6 multicast [vlan vlan_id[-vlan_id2]] initial-packet-buffer max-packet [num]
```

---

### Syntax Definitions

- **vlan_id[-vlan_id2]**: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- **num**: The maximum number of packets allowed to buffer per IPv6 multicast flow. Valid range is 1 to 10.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>num</td>
<td>4</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- The configuration value set with this command is not applied unless initial packet buffering is administratively enabled for the switch.
- Configuring parameter values for initial packet buffering is supported only in the VLAN domain; the service domain is not supported.

### Examples

- `ipv6 multicast initial-packet-buffer max-packet 4`
- `ipv6 multicast vlan 2 initial-packet-buffer max-packet 10`
- `ipv6 multicast vlan 3-5 initial-packet-buffer max-packet 10`

### Release History

Release 8.2.1; command introduced.
Release 8.4.1.R02; `vlan` parameter added.
**Related Commands**

- `ipv6 multicast initial-packet-buffer admin-state` Enables or disables the initial packet buffering feature globally on the switch for IPv6 multicast flows.
- `show ipv6 multicast` Displays the status and configuration parameters of initial multicast packet buffer for IPv6 flows on the switch.

**MIB Objects**

- `alaIpmsConfigTable`
- `alaIpmsConfigType`
- `alaIpmsConfigAddressType`
- `alaIpmsConfigValue`
- `alaIpmsConfigInitialPacketBufferMaxPacket`
**ipv6 multicast initial-packet-buffer max-flow**

Configures the maximum number of IPv6 multicast flows that can be buffered on the specified VLAN or globally on the switch.

```
ipv6 multicast [vlan vlan_id[-vlan_id2]] initial-packet-buffer max-flow [num]
```

**Syntax Definitions**

- `vlan_id[-vlan_id2]` VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `num` The maximum number of IPv6 multicast flows allowed for initial packet buffering. Valid range is 1 to 32.

**Defaults**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>num</code></td>
<td>32</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- The configuration value set with this command is not applied unless initial packet buffering is administratively enabled for the switch.
- Configuring parameter values for initial packet buffering is supported only in the VLAN domain; the service domain is not supported.

**Examples**

- `ipv6 multicast initial-packet-buffer max-flow 32`
- `ipv6 multicast vlan 2 initial-packet-buffer max-flow 32`
- `ipv6 multicast vlan 3-5 initial-packet-buffer max-flow 32`

**Release History**

Release 8.2.1; command introduced.
Release 8.4.1.R02; `vlan` parameter added.
**Related Commands**

`ipv6 multicast initial-packet-buffer admin-state`  
Enables or disables the initial packet buffering feature globally on the switch for IPv6 multicast flows.

`show ip multicast`  
Displays the status and configuration parameters of initial multicast packet buffer for IPv6 flows on the switch.

**MIB Objects**

`alaIpmsConfigTable`
- `alaIpmsConfigType`
- `alaIpmsConfigAddressType`
- `alaIpmsConfigValue`
- `alaIpmsConfigInitialPacketBufferMaxFlow`
ipv6 multicast initial-packet-buffer timeout

Configures the timeout value for the buffered IPv6 initial multicast packets on the specified VLAN or globally on the switch.

ipv6 multicast [vlan vlan_id[-vlan_id2]] initial-packet-buffer timeout [seconds]

**Syntax Definitions**

- **vlan_id[-vlan_id2]**: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- **seconds**: The timeout value for the initial buffered IPv6 multicast packets in seconds. Valid range is 1 to 10.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>10</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- If the buffered multicast packet is not sent out before the timeout, then the buffered packets will be removed from IPMS system.
- The configuration value set with this command is not applied unless initial packet buffering is administratively enabled for the switch.
- Configuring parameter values for initial packet buffering is supported only in the VLAN domain; the service domain is not supported.

**Examples**

- `ipv6 multicast initial-packet-buffer timeout 2`
- `ipv6 multicast vlan 2 initial-packet-buffer timeout 5`
- `ipv6 multicast vlan 3-5 initial-packet-buffer timeout t`

**Release History**

Release 8.2.1; command introduced.
Release 8.4.1.R02; **vlan** parameter added.
Related Commands

**ipv6 multicast initial-packet-buffer admin-state**
Enables or disables the initial packet buffering feature globally on the switch for IPv6 multicast flows.

**show ip multicast**
Displays the status and configuration parameters of initial multicast packet buffer for IPv6 flows on the switch.

MIB Objects

alaIpmsConfigTable
alaIpmsConfigType
alaIpmsConfigAddressType
alaIpmsConfigValue
alaIpmsConfigInitialPacketBufferTimeout
ipv6 multicast initial-packet-buffer min-delay

Configures the minimum delay to program the multicast replication index for IPv6 multicast flows buffered for initial packet on the specified VLAN or globally on the switch.

ipv6 multicast [vlan vlan_id[-vlan_id2]] initial-packet-buffer min-delay [milliseconds]

Syntax Definitions

vlan_id[-vlan_id2] VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
milliseconds The minimum delay value to program the multicast replication index for IPv6 multicast flows buffered for initial packet. Valid range is 0 to 1000.

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>milliseconds</td>
<td>0</td>
</tr>
</tbody>
</table>

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

Usage Guidelines

Note. This command configures a timer to delay the programming of multicast replication index in hardware which might increase the number of multicast packets lost during the learning phase.

• The configuration value set with this command is not applied unless initial packet buffering is administratively enabled for the switch.

• Configuring parameter values for initial packet buffering is supported only in the VLAN domain; the service domain is not supported.

Examples

-> ipv6 multicast initial-packet-buffer min-delay 200
-> ipv6 multicast vlan 2 initial-packet-buffer min-delay 200
-> ipv6 multicast vlan 3-5 initial-packet-buffer min-delay 200
Release History

Release 8.2.1; command introduced.
Release 8.4.1.R02; vlan parameter added.

Related Commands

ipv6 multicast initial-packet-buffer admin-state
Enables or disables the initial packet buffering feature globally on the switch for IPv6 multicast flows.

Displays the status and configuration parameters of initial multicast packet buffer for IPv6 flows on the switch.

MIB Objects

alaIpmsConfigTable
   alaIpmsConfigType
   alaIpmsConfigAddressType
   alaIpmsConfigValue
   alaIpmsConfigInitialPacketBufferMinDelay
ipv6 multicast display-interface-names

Sets the display output of the show commands listed below. When enabled, the display outputs for these commands will show the IPv6 interface name for each VLAN associated with the IPv6 multicast table entry.

**ipv6 multicast display-interface-names**

**no ipv6 multicast display-interface-names**

---

**Syntax Definitions**

N/A

**Defaults**

By default, this function is disabled. The display format is set to include the VLANs that are associated with the IPv6 multicast source and forward flows.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the no form of this command to revert back to displaying the VLAN name.
- If there are any VLANs that are not configured with an IPv6 interface or the IPv6 interface is disabled, the output display will still include the VLAN when this function is enabled.
- This command may be helpful when reviewing output from multicast snooping commands and comparing state in multicast routing, which only interacts with IPv6 interfaces.
- Enabling the display interface names option applies to the following show commands:
  - `show ipv6 multicast forward`
  - `show ipv6 multicast neighbor`
  - `show ipv6 multicast querier`
  - `show ipv6 multicast group`
  - `show ipv6 multicast source`
  - `show ipv6 multicast tunnel`
- The command examples provided display the show ipv6 multicast source output after the display interface name function is turned on (enabled) and off (disabled).
**Examples**

-> ipv6 multicast display-interface-name

-> show ipv6 multicast source

</tbody>
</table>

**Release History**

Release 8.3.1.R02; command was introduced.

**Related Commands**

- `show ipv6 multicast source` Displays the IPv6 Multicast Switching and Routing source table entries.
- `show ipv6 multicast forward` Displays the IPv6 Multicast Switching and Routing forwarding table entries.

**MIB Objects**

alaIpmsGlobalConfigTable
  alaIpmsGlobalConfigAddressType
  alaIpmsGlobalConfigDisplayInterfaceNames
**ipv6 multicast inherit-default-vrf-config**

Configures whether or not the global IPMSv6 configuration defined in the default VRF instance is applied to all VRF instances.

```plaintext
ipv6 multicast inherit-default-vrf-config

no ipv6 multicast inherit-default-vrf-config
```

**Syntax Definitions**

N/A

**Defaults**

By default, the global IPMSv6 configuration defined in the default VRF instance is applied to all VRF instances on the switch.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to disable this function. When disabled, the global IPMSv6 configuration defined in the default VRF instance is not applied to all other VRF instances on the switch.

- When enabled, additional VRF instances will inherit the global IPMSv6 configuration defined in the default VRF instance.

- A global IPMSv6 configuration defined for a specific non-default VRF instance takes precedence over the global IPMSv6 configuration defined for the default VRF.

**Examples**

- `ipv6 multicast inherit-default-vrf-config`
- `no ipv6 multicast inherit-default-vrf-config`

**Release History**

Release 8.3.1; command introduced.
Related Commands

**show ipv6 multicast**  
Displays the IPv6 Multicast Switching and Routing status and general configuration parameters.

MIB Objects

`alaIpmsGlobalConfigTable`  
`alaIpmsGlobalConfigAddressType`  
`alaIpmsGlobalConfigInheritDefaultVrfConfig`
**ipv6 multicast profile**

Defines an IPMS profile that is used to apply a pre-defined configuration to the global IPMS instance (all VLAN and service instances) or to a specific VLAN or service instance. Using a configuration profile to configure IPMS functionality avoids having to configure each IPMS parameter with a separate CLI command.

This section describes the base command (`ipv6 multicast profile`) along with optional command keywords that are used to configure IPMS parameter values that are applied when the profile is assigned to an IPMS instance. Optional keywords are listed separately but can be entered in combination on the same command line. Use the `no` form for the keywords to change a specific parameter value for the profile.

There is a “default” profile that defines a default set of IPMS parameter values that is automatically assigned to an IPMS instance. The default profile cannot be deleted, but the profile parameter values are configurable through this command.

```
ipv6 multicast profile profile_name
  [admin-state {enable | disable}]
  [flood-unknown {enable | disable}]
  [version version]
  [robustness robustness]
  [querying {enable | disable}]
  [query-interval [seconds]]
  [query-response-interval [milliseconds]]
  [last-member-query-interval [milliseconds]]
  [unsolicited-report-interval [seconds]]
  [proxying {enable | disable}]
  [spoofing {enable | disable}]
  [spoofing static-source-ip ipv6_address]
  [zapping {enable | disable}]
  [querier-forwarding {enable | disable}]
  [router-timeout [seconds]]
  [source-timeout [seconds]]
  [max-group [num] [action {none | drop | replace}]]
  [helper-address [ipv6_address]]
  [zero-based-query {enable | disable}]
  [forward-mode {asm | ssm | mac | auto}]
  [update-delay-interval milliseconds]
  [fast-join {enable | disable}]
  [initial-packet-buffer admin-state {enable | disable}]
  [initial-packet-buffer max-flow [num]]
  [initial-packet-buffer max-packet [num]]
  [initial-packet-buffer timeout [seconds]]
  [initial-packet-buffer min-delay [milliseconds]]
```

```
no ipv6 multicast profile profile_name [admin-state | flood-unknown | version | robustness | ...]
```
**Syntax Definitions**

*profile_name* 

The name to associate with the IPMS profile.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the *no* form of this command to remove an IPMS profile from the switch configuration.
- To change the value of a specific profile parameter, specify the parameter keyword with this command. For example, *no ipv6 multicast profile ipms-1 admin-state*, *ipv6 multicast profile ipms-1 query-interval 100*, or *ipv6 multicast profile ipms-1 querying enable*. The new parameter values are applied to all IPMS instances to which the profile is assigned.
- The profile name must already exist in the switch configuration before parameter values can be modified. Use this command to create the profile first, then configure the profile parameter values.
- For more information about specific profile parameter values, refer to the following explicit IPMS configuration commands for each profile parameter:

<table>
<thead>
<tr>
<th>Port Template Parameter</th>
<th>Explicit Port Configuration Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>[admin-state {enable</td>
<td>disable}]</td>
</tr>
<tr>
<td>[flood-unknown {enable</td>
<td>disable}]</td>
</tr>
<tr>
<td>[version version]</td>
<td>ipv6 multicast version</td>
</tr>
<tr>
<td>[robustness robustness]</td>
<td>ipv6 multicast robustness</td>
</tr>
<tr>
<td>[querying {enable</td>
<td>disable}]</td>
</tr>
<tr>
<td>[query-interval {seconds}]</td>
<td>ipv6 multicast query-interval</td>

**ipv6 multicast apply-profile**

Assigns the name of an existing IPMS configuration profile to the global IPMS instance (all VLANs and services) or to a specific VLAN or Shortest Path Bridging (SPB) service instance. An IPMS configuration profile defines parameter options that are applied to the IPMS instance to which the profile is assigned.

```
ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] apply-profile profile_name
```

```
no ipv6 multicast [vlan vlan_id[-vlan_id2] | service service_id[-service_id2]] apply-profile
```

**Syntax Definitions**

- `vlan vlan_id[-vlan_id2]`: VLAN on which to apply the configuration. Use a hyphen to specify a range of VLAN IDs.
- `service_id[-service_id2]`: SPB service ID on which to apply the configuration. The valid range is 1–32767. Use a hyphen to specify a range of service IDs. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.
- `profile_name`: The name to associate with the IPMS profile.

**Defaults**

There is a “default” profile that defines a default set of IPMS parameter values that is automatically assigned to an IPMS instance.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Support</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to revert the profile assignment back to the “default” profile.
- Specify a range of VLANs (`vlan 20-25`) or a range of SPB services (`service 10-15`) to apply the specified profile to multiple VLANs or services with one CLI command.
- The specified profile name must already exist in the switch configuration.

**Examples**

- `ipv6 multicast apply-profile “MLDv2 with Zapping”`
- `ipv6 multicast vlan 20 apply-profile “MLDv2 with Zapping”`
- `ipv6 multicast vlan 20-25 apply-profile “MLDv2 with Zapping”`
- `ipv6 multicast service 10 apply-profile “MLDv2 with Zapping”`
- `ipv6 multicast service 10-15 apply-profile “MLDv2 with Zapping”`
- `no ipv6 multicast apply-profile`
-> no ipv6 multicast vlan 20 apply-profile
-> no ipv6 multicast vlan 20-15 apply-profile
-> no ipv6 multicast service 10 apply-profile
-> no ipv6 multicast service 10-15 apply-profile

**Release History**

Release 8.4.1.R02; command was introduced.

**Related Commands**

- **ipv6 multicast profile**
  
  Defines an IPMS profile that is used to apply a pre-defined IPMS configuration.

- **show ipv6 multicast**
  
  Displays the profile assignment for the IPMS instance.

- **show ipv6 multicast profile**
  
  Displays the IPMS profile configuration.

**MIB Objects**

- **alaIpmsProfileTable**
  
  - alaIpmsProfileAddressType
  - alaIpmsProfileName
  - alaIpmsProfileIndex
  - alaIpmsProfileRowStatus

- **alaIpmsConfigTable**
  
  - alaIpmsConfigType
  - alaIpmsConfigAddressType
  - alaIpmsConfigValue
  - alaIpmsConfigProfileName
**show ip multicast**

Displays the IP Multicast Switching and Routing status and the general configuration parameters for the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

```
show ip multicast [vlan vlan_id | service service_id]
```

**Syntax Definitions**

- `vlan_id`  
  VLAN ID number (1–4094).

- `service_id`  
  SPB service ID number (1–32767). *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*

**Defaults**

By default the status and general configuration parameters for the system are displayed.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td></td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Specify a VLAN ID to display the configuration information for a specific VLAN.
- Specify an SPB service ID to display the configuration information for a specific SPB service.

**Examples**

```
-> show ip multicast

output definitions

**Profile**
The name of a predefined IPMS configuration profile that is assigned to this instance. Configured through the `ip multicast profile` command.

**Status**
Whether IP Multicast Switching and Routing is **Enabled** or **Disabled** (the default status). Configured through the `ip multicast admin-state` command.

**Flood Unknown**
Whether the flooding of initial unknown multicast traffic is **Enabled** or **Disabled** (the default status). Configured through the `ip multicast flood-unknown` command.

**Version**
Displays the default IGMP version, which can be 1, 2 or 3. Configured through the `ip multicast version` command.

**Robustness**
Displays the IGMP robustness value, ranging from 1 to 7. (The default value is 2). Configured through the `ip multicast robustness` command.

**Querying**
Whether IGMP querying is **Enabled** or **Disabled** (the default status). Configured through the `ip multicast querying` command.

**Query Interval (seconds)**
Displays the time (in seconds) between IGMP queries. (The default value is 125 seconds). Configured through the `ip multicast query-interval` command.

**Query Response Interval (tenths of seconds)**
Displays the time (in tenths of seconds) taken to reply to an IGMP query message. (The default value is 100 tenths-of-seconds). Configured through the `ip multicast query-response-interval` command.
output definitions

<table>
<thead>
<tr>
<th>Last Member Query Interval (tenths of seconds)</th>
<th>Displays the time (in tenths of seconds) taken to reply to an IGMP query message sent in response to a leave group message. (The default value is 10 tenths-of-seconds.) Configured through the <code>ip multicast last-member-query-interval</code> command.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unsolicited Report Interval (seconds)</td>
<td>Displays the time period (in seconds) to proxy any changed IGMP membership state. (The default value is 1 second). Configured through the <code>ip multicast unsolicited-report-interval</code> command.</td>
</tr>
<tr>
<td>Proxying</td>
<td>Whether IGMP proxying on the system is <strong>enabled</strong> or <strong>disabled</strong> (the default status). Configured through the <code>ip multicast proxying</code> command.</td>
</tr>
<tr>
<td>Spoofing</td>
<td>Whether IGMP spoofing on the system is <strong>enabled</strong> or <strong>disabled</strong> (the default status). Configured through the <code>ip multicast spoofing</code> command.</td>
</tr>
<tr>
<td>Zapping</td>
<td>Whether IGMP zapping on the system is <strong>enabled</strong> or <strong>disabled</strong> (the default status). Configured through the <code>ip multicast zapping</code> command.</td>

show ip multicast port

Displays the maximum group configuration applicable for the specified port or the specified Service Access Point (SAP) port. The current number of groups learned on a port, port/VLAN, SAP port, or SAP port/Shortest Path Bridging (SPB) service instance is also displayed.

`show ip multicast {port [chassis/slot/port | sap port [sap_id]}`

**Syntax Definitions**

- **chassis**
  - The chassis identifier.

- **slot/port**
  - The slot and port number (3/1).

- **sap_id**
  - The SAP ID (chassis/slot/port:encapsulation). *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Specify a port number to display the configuration information for a specific switch port.
- Specify a SAP ID to display the configuration information for a specific SAP port.
- When using the `sap port` parameter with this command, specify a SAP ID by entering the access port number followed by the encapsulation value (for example, `ip multicast static-querier service 10 sap port 1/1/23:10`, where 1/1/23:10 is the SAP ID).
- A SAP ID is comprised of an access port and an encapsulation value. For example, the SAP ID for access port 1/1/23 with VLAN 10 encapsulation is 1/1/23:10. Any traffic received on port 1/1/23 that is tagged with VLAN 10 is mapped to the SPB service that is associated with the 1/1/23:10 SAP ID. Refer to Chapter 10, “Service Manager Commands,” for more information.
**Examples**

`-> show ip multicast port`

**Legends:**
- Interface Max-group = Max-group limit on the interface

show ip multicast forward

Displays the IP Multicast Switching and Routing forwarding table entries for the specified IP multicast group address or all the entries if no IP multicast group address is specified.

show ip multicast forward [ip_address] [vlan [vlan_id]-vlan_id2] [service [service_id]-service_id2]] [all-vrf]

Syntax Definitions

**ip_address**  
IP multicast group address.

**vlan [vlan_id]-vlan_id2**  
Display forwarding table entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.

**service [service_id]-service_id2**  
Display forwarding table entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.

**all-vrf**  
Display forwarding table entries for all of the VRF instances.

Defaults

By default, forwarding entries for all of the IP multicast groups are displayed for the current VRF instance.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the **ip_address** parameter to display forwarding table entries for a specific multicast group.
- Use the **all-vrf** parameter option to display the forwarding table entries that exist in all of the VRF instances on the switch.
- Forwarding entries are derived by applying the state from the source table to the state in the group, neighbor, and querier tables.
- On an OmniSwitch 9900, this command is available only when IP Multicast Switching and Routing is enabled for the switch. To view the multicast forwarding database on an OmniSwitch 6465 or OmniSwitch 6560 or OmniSwitch 6570M, see the **show ip multicast bridge** and **show ip multicast bridge-forward** commands.
• Use the `ip multicast display-interface-names` command to enable displaying the associated IP interface name in the “Ingress Vlan/Service” and “Egress Vlan/Service” fields instead of the VLAN ID or service ID.

**Examples**

```
-> show ip multicast forward

Total 3 Forwards
Group Address  Host Address  Tunnel Address  Vlan/Service  Egress
---------------+--------------+--------------+------------+----------
225.0.1.0      21.20.20.2  0.0.0.0        vlan 20      vlan 20    1/1/2
225.0.1.0      21.20.20.2  0.0.0.0        service 10   service 10  sdp:32776

```

**output definitions**

- **Group Address**: IP group address of the IP multicast forward.
- **Host Address**: IP host address of the IP multicast forward.
- **Tunnel Address**: IP source tunnel address of the IP multicast forward.
**output definitions (continued)**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ingress Vlan/Service</td>
<td>The ingress VLAN or Shortest Path Bridging (SPB) service ID associated with the IP multicast forward. If the global display interface names option is enabled, then the ingress interface name associated with the IP multicast forward is displayed.</td>
</tr>
<tr>
<td>Egress Vlan/Service</td>
<td>The egress VLAN or SPB service ID associated with the IP multicast forward. If the global display interface names option is enabled, then the egress interface name associated with the IP multicast forward is displayed. The egress interface (port) will also be included in the forward entry with both output formats.</td>
</tr>
<tr>
<td>Interface</td>
<td>The VLAN port or SPB virtual port of the IP multicast forward.</td>
</tr>
</tbody>
</table>

**Release History**

Release 7.1.1; command was introduced.
Release 8.3.1; **all-vrf** parameter added.
Release 8.4.1; **domain** parameter added.
Release 8.4.1.R02; **domain** parameter deprecated.

**Related Commands**

- **ip multicast static-group** Creates a static IGMP group entry on a specified port on a specified VLAN.

**MIB Objects**

- `alaIpmsForwardTable`
  - `alaIpmsForwardConfigType`
  - `alaIpmsForwardAddressType`
  - `alaIpmsForwardValue`
  - `alaIpmsForwardGroupAddress`
  - `alaIpmsForwardHostAddress`
  - `alaIpmsForwardDestAddress`
  - `alaIpmsForwardOrigAddress`
  - `alaIpmsForwardType`
  - `alaIpmsForwardNextConfigType`
  - `alaIpmsForwardNextValue`
  - `alaIpmsForwardNextIfIndex`
  - `alaIpmsForwardNextType`
**show ip multicast neighbor**

Displays the IGMP neighbor table entries of IP Multicast Switching and Routing.

`show ip multicast neighbor [vlan [vlan_id]-[vlan_id2]] | service [service_id]-[service_id2]] | all-vrf`

### Syntax Definitions

**vlan [vlan_id]-[vlan_id2]**  
Display IGMP neighbor table entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.

**service [service_id]-[service_id2]**  
Display IGMP neighbor table entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*

**all-vrf**  
Display IGMP neighbor table entries for all of the VRF instances.

### Defaults

By default, only the neighbor table entries specific to the current VRF instance are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `all-vrf` parameter option to display the neighbor table entries that exist in all of the VRF instances on the switch.

- Interfaces with neighbors receive all IPv4 multicast, including all IGMP traffic.

- Use the `ip multicast display-interface-names` command to enable displaying the associated IP interface name in the “Vlan/Service” field instead of the VLAN ID or service ID.

### Examples

```
-> show ip multicast neighbor

Total 12 Neighbors

**show ip multicast querier**

Displays the IGMP querier table entries of IP Multicast Switching and Routing.

```
show ip multicast querier [vlan [vlan_id]-vlan_id2] | service [service_id]-service_id2]] [all-vrf]
```

### Syntax Definitions

- **vlan [vlan_id]-vlan_id2**: Display IGMP querier table entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.
- **service [service_id]-service_id2**: Display IGMP querier table entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- **all-vrf**: Display IGMP querier table entries for all of the VRF instances.

### Defaults

By default, only IGMP querier entries specific to the current VRF instance are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the **all-vrf** parameter option to display the IGMP querier table entries that exist in all of the VRF instances on the switch.
- Interfaces with queriers receive all IGMP traffic, and if querier forwarding is enabled, these interfaces will also receive all IPv4 multicast traffic.
- Use the **ip multicast display-interface-names** command to enable displaying the associated IP interface name in the “Vlan/Service” field instead of the VLAN ID or service ID.

### Examples

```
-> show ip multicast querier

Total 10 Queriers

<table>
<thead>
<tr>
<th>Host Address</th>
<th>Vlan/Service Interface</th>
<th>Static</th>
<th>Count</th>

**show ip multicast group**

Displays the IGMP group membership table entries of IP Multicast Switching and Routing for the specified IP multicast group address or all entries if no IP multicast group address is specified.

`show ip multicast group [ip_address] [vlan [vlan_id]-vlan_id2] | service [service_id]-service_id2] [all-vrf]`

### Syntax Definitions

- **ip_address**: IP multicast group address.
- **vlan [vlan_id]-vlan_id2**: Display group membership entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.
- **service [service_id]-service_id2**: Display group membership entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.
- **all-vrf**: Display group membership entries for all of the VRF instances.

### Defaults

By default, all IP multicast groups are displayed for the current VRF instance.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the **ip_address** parameter to display entries for a specific multicast group.
- Use the **all-vrf** parameter option to display the IGMP group membership table entries that exist in all of the VRF instances on the switch.
- Use the **ip multicast display-interface-names** command to enable displaying the associated IP interface name in the “Vlan/Service” field instead of the VLAN ID or service ID.

### Examples

```
-> show ip multicast group

- **Group Address**: IP address of the IP multicast group.
- **Source Address**: IP address of the IP multicast source.
output definitions

| Vlan/Service | The VLAN or Shortest Path Bridging (SPB) service ID associated with the IPv4 multicast group. If the global display interface names option is enabled, then the IP interface name associated with the IP multicast group is displayed. |
| Interface | The VLAN port or the SPB virtual port on which the group membership was learned. |
| Mode | IGMP source filter mode. |
| Static | Whether it is a static multicast group or not. |
| Count | Number of IGMP membership requests made. |
| Life | Life time of the IGMP group membership. |

Release History

Release 7.1.1; command was introduced
Release 8.3.1; all-vrf parameter added.
Release 8.4.1; domain parameter added.
Release 8.4.1.R02; domain parameter deprecated.

Related Commands.

**ip multicast static-group**

Creates a static IGMP group entry on a specified port for the specified VLAN or on the specified SPB virtual port for the specified SPB service.

show ip multicast source

Displays the IP Multicast Switching and Routing source table entries matching the specified IP multicast group address or all entries if no IP multicast group address is specified.

`show ip multicast source [ip_address] [vlan [vlan_id]-vlan_id2] [service [service_id]-service_id2] [all-vrf]`

**Syntax Definitions**

`ip_address` | IP multicast group address.
---|---
`vlan [vlan_id]-vlan_id2` | Displays source table entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.
`service [service_id]-service_id2` | Displays source table entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
`all-vrf` | Display source table entries for all of the VRF instances.

**Defaults**

By default, all source table entries are displayed for the current VRF instance.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `ip_address` parameter to display source entries for a specific multicast group.

- In the service domain, only the first flow that is used to learn the source is displayed. Use the `extended` parameter to display other possible multicast IP addresses matching the same multicast MAC address. In this case, an asterisk (*) in the “Host Address” field represents the other multicast IP addresses.

- Use the `all-vrf` parameter option to display the source table entries that exist in all of the VRF instances on the switch.

- On an OmniSwitch 9900, this command is available only when IP Multicast Switching and Routing is enabled for the switch. To view the multicast forwarding database on an OmniSwitch 6465 or OmniSwitch 6560 or OmniSwitch 6570M, see the `show ip multicast bridge` and `show ip multicast bridge-forward` commands.

- Use the `ip multicast display-interface-names` command to enable displaying the associated IP interface name in the “Ingress Vlan/Service” field instead of the VLAN ID or service ID.
**Examples**

-> show ip multicast source

**show ip multicast tunnel**

Displays the IP Multicast Switching and Routing tunneling table entries matching the specified IP multicast group address or all entries if no IP multicast address is specified.

```
show ip multicast tunnel [ip_address] [vlan [vlan_id]-vlan_id2] [service [service_id]-service_id2] [all-vrf]
```

**Syntax Definitions**

- `ip_address` (IP multicast group address.)
- `vlan [vlan_id]-vlan_id2` (Displays tunneling table entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.)
- `service [service_id]-service_id2` (Displays tunneling table entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*)
- `all-vrf` (Display the tunneling table entries for all of the VRF instances.)

**Defaults**

By default, all tunnel entries are displayed for the current VRF instance.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `ip_address` parameter to display the tunnel entries for a specific multicast group.
- Use the `all-vrf` parameter option to display the IP multicast tunnel entries that exist in all of the VRF instances on the switch.
- Use the `ip multicast display-interface-names` command to enable displaying the associated IP interface name in the “Ingress Vlan/Service” field instead of the VLAN ID or service ID.

**Examples**

```
-> show ip multicast tunnel

Total 3 Tunnels

<table>
<thead>
<tr>
<th>Destination</th>
<th>Ingress</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group Address</td>
<td>Host Address</td>
</tr>
<tr>
<td>--------------</td>
<td>-------------</td>
</tr>
</tbody>
</table>
```
Sample output when the global display interface names option is enabled:

```
-> ip multicast display-interface-names
-> show ip multicast tunnel
```

### Total 3 Tunnels

<table>
<thead>
<tr>
<th>Group Address</th>
<th>Host Address</th>
<th>Tunnel Address</th>
<th>Ingress Vlan/Service</th>
</tr>
</thead>
<tbody>
<tr>
<td>225.0.1.0</td>

show ip multicast host-list

Displays the IP multicast host address list configuration for the switch.

show ip multicast host-list [host_list_name]

Syntax Definitions

host_list_name
The name of an existing IP multicast host list.

Defaults
By default, all host lists configured on the switch are displayed.

Platforms Supported
Not supported in this release.

Usage Guidelines
Use the host_list_name parameter to display information for a specific host list.

Examples

-> show ip multicast host-list

Total 2 Lists

Release History

Release 8.3.1.R02; command introduced.
Related Commands

**ip multicast host-list**

Configures a list of host IP addresses that is used for IP multicast group maps and SSM maps.

MIB Objects

- `alaIpmsHostListTable`
- `alaIpmsHostListName`
- `alaIpmsHostListAddressType`
- `alaIpmsHostListAddress`
show ip multicast ssm-map

Displays the Source Specific Multicast (SSM) mapping configuration for the switch.

show ip multicast ssm-map [vlan vlan_id]

Syntax Definitions

vlan_id VLAN for which to display the configuration.

Defaults
By default, all SSM mappings configured on the switch are displayed.

Platforms Supported
Not supported in this release.

Usage Guidelines
Specify a VLAN ID to display the configuration information for a specific VLAN.

Examples

-> show ip multicast ssm-map
Type    Id    Group Address/Prefix  Source List Name
-------+-----+---------------------+--------------------------------
global  0     225.20.1.1/32         h-list1
vlan    200   229.30.1.1/32         h-list2

-> show ip multicast ssm-map vlan 200
Type    Id    Group Address/Prefix  Source List Name
-------+-----+---------------------+--------------------------------
vlan    200   229.30.1.1/32         h-list2

Release History
Release 8.3.1.R02; command introduced.

Related Commands
ip multicast ssm-map Configures a list of host IP addresses.

  alaIpmsSsmMapSourceListName
**show ip multicast bridge**

Displays the IP multicast bridge table entries that match the specified VLAN, Shortest Path Bridging (SPB) service, IP multicast group address, MAC address, or all entries if no additional parameters are specified.

`show ip multicast bridge [vlan [vlan_id|-vlan_id2] | service [service_id|-service_id2] | ip_address | mac_address] [all-vrf]`

**Syntax Definitions**

- **vlan [vlan_id|-vlan_id2]**: Displays bridge table entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.
- **service [service_id|-service_id2]**: Displays bridge table entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- **ip_address**: IP multicast group address.
- **mac_address**: Group MAC address.
- **all-vrf**: Display bridge table entries for all of the VRF instances.

**Defaults**

By default, all bridge table entries are displayed for the current VRF instance.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use one of the optional parameters *(vlan_id, service_id, ip_address, mac_address)* to display bridge table entries for a specific multicast group.
- Use the **all-vrf** parameter option to display the source table entries that exist in all of the VRF instances on the switch.
- Based on the forwarding mode set for the switch (ASM, SSM, or MAC):
  - The “Group Address” field will display either a multicast group address (ASM or SSM) or the MAC address for the multicast group (MAC).
  - The “Host Address” field will display zero (MAC) or the IP host address for the bridge entry (ASM or SSM).
Examples

-> show ip multicast bridge

Total 2 Bridge Entries

<table>

<td>forwarding</td>
<td>00d:00h:00m</td>
</tr>
</tbody>
</table>

output definitions

Vlan/Service The VLAN or Shortest Path Bridging (SPB) service ID associated with the IP multicast bridge entry.

Type The bridge entry type (asm, ssm, mac). Configured through the ip multicast forward-mode command.

Group Address If the bridge entry type is ASM or SSM, this field displays the destination IP group address; if the bridge entry type is MAC, this field displays the destination MAC address.

Host Address The source IP host address (only applies to SSM bridge entries, otherwise this field is blank).

Action The current action taken for the bridge entry (forwarding or filtering).

UpTime The amount of time that has elapsed since the bridge entry was created.

Release History

Release 8.3.1; command introduced.
Release 8.4.1.R02: service parameter added.

**show ip multicast bridge-forward**

Displays the forwarding state of the IP multicast bridge table entries that match the specified VLAN, Shortest Path Bridging (SPB) service, IP multicast group address, MAC address, or all entries if no additional parameters are specified.

```
show ip multicast bridge-forward [vlan [vlan_id]-vlan_id2] | service [service_id]-service_id2] | ip_address | mac_address] [all-vrf]
```

**Syntax Definitions**

- **vlan [vlan_id]-vlan_id2**
  - Displays bridge table entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.

- **service [service_id]-service_id2**
  - Displays bridge table entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*

- **ip_address**
  - IP multicast group address.

- **mac_address**
  - Group MAC address.

- **all-vrf**
  - Display bridge table entries for all of the VRF instances.

**Defaults**

By default, all bridge table entries are displayed for the current VRF instance.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Support</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use one of the optional parameters (vlan_id, service_id, ip_address, mac_address) to display forwarding information for a specific multicast group.

- Use the **all-vrf** parameter option to display the source table entries that exist in all of the VRF instances on the switch.

- Based on the forwarding mode set for the switch (ASM, SSM, or MAC):
  - The “Group Address” field will display either a multicast group address (ASM or SSM) or the MAC address for the multicast group (MAC). In the examples for this command, the forwarding mode is changed to MAC to show how the “Group Address” field changes.
  - The “Host Address” field will display zero (MAC) or the IP host address for the bridge entry (ASM or SSM).
**Examples**

-> show ip multicast bridge-forward

Total 2 Bridge Entries

<table>
<thead>
<tr>
<th>Vlan/Service</th>
<th>Type</th>
<th>Group Address</th>
<th>Host Address</th>

  alaIpmsBridgeForwardNextIfIndex,
  alaIpmsBridgeForwardNextSubValue
  alaIpmsBridgeForwardUpTime
**show ip multicast bidir-forward**

Displays the IP multicast Bidirectional Protocol Independent Multicast (BIDIR-PIM) forwarding table entries for the specified IP multicast group address or all the entries if no IP multicast group address is specified.

```
show ip multicast bidir-forward [ip_address] [all-vrf]
```

### Syntax Definitions

- **ip_address**
  - IP multicast group address.

- **all-vrf**
  - Display forwarding table entries for all of the virtual routing and forwarding (VRF) instances.

### Defaults

By default, BIDIR-PIM forwarding entries for all of the IP multicast groups are displayed for the current VRF instance.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the **ip_address** parameter to display BIDIR-PIM forwarding table entries for a specific multicast group.
- Use the **all-vrf** parameter option to display the BIDIR-PIM forwarding table entries that exist in all of the VRF instances on the switch.

### Examples

```
-> vrf vrf-1 show ip multicast bidir-forward
VRF:vrf-1  Total 2 Forwards

Egress
Group Address  Vlan/Service  Interface
---------------+-------------+-----------
225.0.1.0      vlan 30     1/2/1
  vlan 30     1/2/2
```
show ip multicast bidir-forward all-vrf

VRF:default  Total 3 Forwards

<table>
<thead>
<tr>
<th>Group Address</th>
<th>Vlan/Service</th>
<th>Interface</th>
</tr>
</thead>
<tbody>
<tr>
<td>225.0.1.0</td>
<td>vlan 20</td>
<td>1/1/1</td>
</tr>
<tr>
<td></td>
<td>vlan 20</td>
<td>1/1/2</td>
</tr>
<tr>
<td>225.0.1.1</td>
<td>vlan 21</td>
<td>1/1/2</td>
</tr>
</tbody>
</table>

VRF:vrf-1  Total 2 Forwards

<table>
<thead>
<tr>
<th>Group Address</th>
<th>Vlan/Service</th>
<th>Interface</th>
</tr>
</thead>
<tbody>
<tr>
<td>225.0.1.0</td>
<td>vlan 30</td>
<td>1/2/1</td>
</tr>
<tr>
<td></td>
<td>vlan 30</td>
<td>1/2/2</td>
</tr>
</tbody>
</table>

output definitions

- **VRF**: The VRF instance for the BIDIR route.
- **Group Address**: IP group address for the BIDIR route.
- **Egress VLAN/Service**: The destination VLAN or Shortest Path Bridging (SPB) service for the BIDIR route.
- **Interface**: Destination VLAN port or SPB virtual port for the BIDIR route.

Release History

Release 8.3.1.R02; command was introduced.

Related Commands

- **show ip multicast bridge-forward**: Displays the forwarding state of the IP multicast bridge table entries.

MIB Objects

- alaIpmsForwardTable

show ip multicast profile

Displays a list of available IPMS configuration profiles or the parameter settings for a specific profile.

show ip multicast profile [profile_name]

Syntax Definitions

profile_name
The name of an existing IPMS profile.

Defaults
By default, a list of available profiles is displayed.

Platforms Supported
This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines
The specified profile name must already exist in the switch configuration.

Examples

-> show ip multicast profile

Total 2 Profiles

Profile Name
---------------------
default
IGMPv3 with Zapping

-> show ip multicast profile "IGMPv3 with Zapping"

Status = enabled,

show ipv6 multicast

Displays the IPv6 Multicast Switching and Routing status and the general configuration parameters on the specified VLAN, Shortest Path Bridging (SPB) service, or on the system if no VLAN or SPB service is specified.

show ipv6 multicast [vlan vlan_id | service service_id]

Syntax Definitions

- **vlan_id**: VLAN for which to display the configuration.
- **service_id**: SPB service ID number (1–32767). *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*

Defaults

By default, the status and general configuration parameters for the system are displayed.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

**output definitions**

<table>
<thead>
<tr>
<th><strong>Profile</strong></th>
<th>The name of a predefined IPMS configuration profile that is assigned to this instance. Configured through the <code>ipv6 multicast profile</code> command.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Status</strong></td>
<td>Whether the IPv6 Multicast Switching and Routing is <strong>Enabled</strong> or <strong>Disabled</strong> (the default status). Configured through the <code>ipv6 multicast admin-state</code> command.</td>
</tr>
<tr>
<td><strong>Flood Unknown</strong></td>
<td>Whether the flooding of initial unknown multicast traffic is <strong>Enabled</strong> or <strong>Disabled</strong> (the default status). Configured through the <code>ipv6 multicast flood-unknown</code> command.</td>
</tr>
<tr>
<td><strong>Version</strong></td>
<td>Displays the default MLD version, which can be 1 or 2. Configured through the <code>ipv6 multicast version</code> command.</td>
</tr>
<tr>
<td><strong>Robustness</strong></td>
<td>Displays the MLD robustness value, ranging from 1 to 7. (The default value is 2). Configured through the <code>ipv6 multicast robustness</code> command.</td>
</tr>
<tr>
<td><strong>Querying</strong></td>
<td>Whether MLD querying is <strong>Enabled</strong> or <strong>Disabled</strong> (the default status). Configured through the <code>ipv6 multicast querying</code> command.</td>
</tr>
<tr>
<td><strong>Query Interval (seconds)</strong></td>
<td>Displays the time (in seconds) between MLD queries. (The default value is 125 seconds). Configured through the <code>ipv6 multicast query-interval</code> command.</td>
</tr>
<tr>
<td><strong>Query Response Interval (milliseconds)</strong></td>
<td>Displays the time (in milliseconds) taken to reply to an MLD query message. (The default value is 100 tenths-of-seconds). Configured through the <code>ipv6 multicast query-response-interval</code> command.</td>
</tr>
</tbody>
</table>
### Last Member Query Interval (milliseconds)
Displays the time (in milliseconds) taken to reply to an MLD query message sent in response to a leave group message. (The default value is 10 tenths-of-seconds.) Configured through the `ipv6 multicast last-member-query-interval` command.

### Unsolicited Report Interval (seconds)
Displays the time period (in seconds) to proxy any changed MLD membership state. (The default value is 1 second). Configured through the `ipv6 multicast unsolicited-report-interval` command.

### Proxying
Whether MLD proxying on the system is **Enabled** or **Disabled** (the default status). Configured through the `ipv6 multicast proxying` command.

### Spoofing
Whether MLD spoofing on the system is **Enabled** or **Disabled** (the default status). Configured through the `ipv6 multicast spoofing` command.

### Zapping
Whether MLD zapping on the system is **Enabled** or **Disabled** (the default status). Configured through the `ipv6 multicast zapping` command.

### Querier Forwarding
Whether MLD querier forwarding on the system is **Enabled** or **Disabled** (the default status). Configured through the `ipv6 multicast querier-forwarding` command.

### Router Timeout (seconds)
Displays the MLD router timeout in seconds. (The default value is 90 seconds.) Configured through the `ipv6 multicast router-timeout` command.

### Source Timeout (seconds)
Displays the MLD source timeout in seconds. (The default value is 30 seconds.) Configured through the `ipv6 multicast source-timeout` command.

### Max-group
Displays the global maximum group limit that can be learned per VLAN instance. (The default value is 0 which means no limit is imposed). Configured through the `ipv6 multicast max-group` command.

### Max-group action
Displays the action taken when the maximum group limit has been exceeded, which can be **none**, **drop** or **replace**. Configured through the `ipv6 multicast max-group` command.

### Helper-address
Displays the destination IPv6 address of a relay host, where MLD host reports and Leave messages are to be sent. (By default, no Helper-address is configured.) *This function is supported only in the VLAN domain; service domain is not supported.*

### Static Querier Address
The Static Source IPv6 Address to be used when querying. (The default value of “::” indicates that this is not configured.) *This function is not supported.*

### Static Spoofing Address
The Static Source IPv6 Address to be used when spoofing. (The default value of “::” indicates that this is not configured.) Configured through the `ipv6 multicast spoofing static-source-ip` command.

### Zero-based Query
The current state of Zero-based Querying, which can be **disabled** or **enabled** (the default status). Configured through the `ipv6 multicast zero-based-query` command.

### Forward Mode
Displays the current IPv6 Forwarding mode (**asm**, **ssm**, **mac**, or **auto**). Configured through the `ipv6 multicast forward-mode` command.
Show IPv6 Multicast

**Output Definitions**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Update Delay Interval</strong></td>
<td>Displays the amount of time (in milliseconds) between propagating IPMS state changes. (The default value is 0 milliseconds). Configured through the <code>ipv6 multicast update-delay-interval</code> command.</td>
</tr>
<tr>
<td><strong>SSM Mapping</strong></td>
<td>Whether Source Specific Multicast (SSM) mapping is enabled or disabled (the default). When enabled, Any Source Multicast (ASM) group memberships are translated into SSM group memberships. Configured through the <code>ipv6 multicast ssm-map</code> command. This function is not supported.</td>
</tr>
<tr>
<td><strong>Fast Join</strong></td>
<td>Whether the IP Multicast Switching fast join functionality is enabled or disabled (the default). When enabled, forwarding entries are automatically created in hardware as soon as group memberships are learned instead of waiting for the multicast traffic to reach the switch. Configured through the <code>ipv6 multicast fast-join</code> command.</td>
</tr>
<tr>
<td><strong>Initial Packet Buffering</strong></td>
<td>Whether Initial Packet Buffering is enabled or disabled (the default status). Configured through the <code>ipv6 multicast initial-packet-buffer admin-state</code> command. This function is supported only in the VLAN domain; service domain is not supported.</td>
</tr>
<tr>
<td><strong>Max Flows</strong></td>
<td>The maximum number of IPv6 multicast flows buffered for initial packet. Configured through the <code>ipv6 multicast initial-packet-buffer max-flow</code> command. This function is supported only in the VLAN domain; service domain is not supported.</td>
</tr>
<tr>
<td><strong>Max Packets Per Flow</strong></td>
<td>The maximum number of initial packets buffered per IPv6 multicast flow. Configured through the <code>ipv6 multicast initial-packet-buffer max-packet</code> command. This function is supported only in the VLAN domain; service domain is not supported.</td>
</tr>
<tr>
<td><strong>Buffer Timeout</strong></td>
<td>The timeout value for the initial buffered IPv6 multicast packets. Configured through the <code>ipv6 multicast initial-packet-buffer timeout</code> command. This function is supported only in the VLAN domain; service domain is not supported.</td>
</tr>
<tr>
<td><strong>Min Delay</strong></td>
<td>The minimum delay to program the multicast replication index for IPv6 multicast flows buffered for initial packet. Configured through the <code>ipv6 multicast initial-packet-buffer min-delay</code> command. This function is supported only in the VLAN domain; service domain is not supported.</td>
</tr>

**show ipv6 multicast port**

Displays the maximum group configuration applicable for the specified port or the specified Service Access Point (SAP) port. The current number of groups learned on a port, port/VLAN, SAP port, or SAP port/Shortest Path Bridging (SPB) service instance is also displayed.

*show ipv6 multicast {port [chassis/slot/port] | sap port [sap_id]}*

---

**Syntax Definitions**

- **chassis**
  The chassis identifier.

- **slot/port**
  The slot and port number (3/1).

- **sap_id**
  The SAP ID (chassis/slot/port:encapsulation). *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*

---

**Defaults**

N/A

---

**Usage Guidelines**

- Specify a port number to display the configuration information for a specific port.

- Specify a SAP ID to display the configuration information for a specific SAP port.

- When using the `sap port` parameter with this command, specify a SAP ID by entering the access port number followed by the encapsulation value (for example, `ip multicast static-querier service 10 sap port 1/1/23:10`, where `1/1/23:10` is the SAP ID).

- A SAP ID is comprised of an access port and an encapsulation value. For example, the SAP ID for access port `1/1/23` with VLAN `10` encapsulation is `1/1/23:10`. Any traffic received on port `1/1/23` that is tagged with VLAN `10` is mapped to the SPB service that is associated with the `1/1/23:10` SAP ID. Refer to Chapter 10, “Service Manager Commands,” for more information.
Examples

-> show ipv6 multicast port

**Release History**

Release 7.1.1; command was introduced.
Release 8.4.1; sap port parameter added.

**Related Commands**

- **ipv6 multicast port max-group** Configures the maximum group limit learned per port.
- **ipv6 multicast max-group** Configures the maximum group limit learned per port for the specified VLAN, SPB service, or on the system if no VLAN or SPB service is specified.

**MIB Objects**

- alaIpmsIntfStatsConfigType
  - alaIpmsIntfStatsAddressType
  - alaIpmsIntfStatsValue
  - alaIpmsIntfStatsCurrentGroupCount
  - alaIpmsIntfStatsMaxGroupLimit
  - alaIpmsIntfStatsMaxGroupExceedAction
**show ipv6 multicast forward**

Display the IPv6 Multicast Switching and Routing forwarding table entries for the specified IPv6 multicast group address or all entries if no IPv6 multicast address is specified.

```
show ipv6 multicast forward [ipv6_address] [vlan [vlan_id]-[vlan_id2]] [service [service_id]-[service_id2]] [all-vrf]
```

**Syntax Definitions**

- `ipv6_address` IPv6 multicast group address.
- `vlan [vlan_id]-[vlan_id2]` Display forwarding table entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.
- `service [service_id]-[service_id2]` Display forwarding table entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `all-vrf` Display forwarding table entries for all of the VRF instances.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>V72/C32</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>X48C6/T48C6/V48C8/C32E/T24C2/X24C2</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `ipv6_address` parameter to display forwarding entries for a specific multicast group.
- Use the `all-vrf` parameter option to display the forwarding table entries that exist in all of the VRF instances on the switch.
- Forwarding entries are derived by applying the state from the source table to the state in the group, neighbor, and querier tables.
- On an OmniSwitch 9900, this command is available only when IP Multicast Switching and Routing is enabled for the switch. To view the multicast forwarding database on an OmniSwitch 6465 or OmniSwitch 6560 or OmniSwitch 6570M, see the `show ipv6 multicast bridge` and `show ipv6 multicast bridge-forward` commands.
- Use the `ipv6 multicast display-interface-names` command to enable displaying the associated IPv6 interface name in the “Ingress Vlan/Service” and “Egress Vlan/Service” fields instead of the VLAN ID or service ID.
Examples

-> show ipv6 multicast forward

Total 3 Forwards

</table>
**Release History**

Release 7.1.1; command was introduced.
Release 8.3.1; `all-vrf` parameter added.
Release 8.4.1; `domain` parameter added.
Release 8.4.1.R02; `domain` parameter deprecated.

**Related Commands**

`ipv6 multicast static-group`  
Creates a static MLD group entry on a specified port on a specified VLAN.

**MIB Objects**

- `alaIpmsForwardTable`
- `alaIpmsForwardConfigType`
- `alaIpmsForwardAddressType`
- `alaIpmsForwardValue`
- `alaIpmsForwardGroupAddress`
- `alaIpmsForwardHostAddress`
- `alaIpmsForwardDestAddress`
- `alaIpmsForwardOrigAddress`

- `alaIpmsForwardNextType`
show ipv6 multicast neighbor

Displays the MLD neighbor table entries of IPv6 Multicast Switching and Routing.

show ipv6 multicast neighbor [vlan [vlan_id]-vlan_id2] [service [service_id]-service_id2]] [all-vrf]

Syntax Definitions

- **vlan [vlan_id]-vlan_id2** Display MLD neighbor table entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.
- **service [service_id]-service_id2** Display MLD neighbor table entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- **all-vrf** Display MLD neighbor table entries for all of the VRF instances.

Defaults

By default, only the neighbor table entries specific to the current VRF instance are displayed.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the **all-vrf** parameter option to display the IPv6 neighbor table entries that exist in all of the VRF instances on the switch.
- Interfaces with neighbors receive all IPv6 multicast, including all MLD traffic.
- Use the **ipv6 multicast display-interface-names** command to enable displaying the associated IPv6 interface name in the “Vlan/Service” field instead of the VLAN ID or service ID.

Examples

```bash
-> show ipv6 multicast neighbor

Total 4 Neighbors

<table>

**show ipv6 multicast querier**

Displays the MLD querier table entries of IPv6 Multicast Switching and Routing.

```plaintext
show ipv6 multicast querier [vlan [vlan_id]-vlan_id2] [service [service_id]-service_id2]] [all-vrf]
```

**Syntax Definitions**

- `vlan [vlan_id]-vlan_id2` Display MLD querier table entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.
- `service [service_id]-service_id2` Display MLD querier table entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `all-vrf` Display querier table entries for all of the VRF instances.

**Defaults**

By default, only MLD querier entries specific to the current VRF instance are displayed.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `all-vrf` parameter option to display the MLD querier table entries that exist in all of the VRF instances on the switch.
- Interfaces with queriers receive all MLD traffic, and if querier forwarding is enabled, these interfaces will also receive all IPv6 multicast traffic.
- Use the `ipv6 multicast display-interface-names` command to enable displaying the associated IPv6 interface name in the “Vlan/Service” field instead of the VLAN ID or service ID.

**Examples**

```plaintext
-> show ipv6 multicast querier

Total 4 Queriers

<table>
<thead>
<tr>
<th>Host Address</th>
<th>Vlan/Service</th>
<th>Interface</th>
<th>Static</th>
<th>Count</th>
<th>Life</th>
</tr>
</thead>
<tbody>

show ipv6 multicast group

Displays the MLD group membership table entries of IPv6 Multicast Switching and Routing for the specified IPv6 multicast group address or all entries if no IPv6 multicast group address is specified.

show ipv6 multicast group [ipv6_address] [vlan [vlan_id[-vlan_id2]] | service [service_id[-service_id2]]] [all-vrf]

Syntax Definitions

ipv6_address IPv6 multicast group address.

vlan [vlan_id[-vlan_id2]] Display MLD group membership entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.

service [service_id[-service_id2]] Display MLD group membership entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*

all-vrf Display group membership entries for all of the VRF instances.

Defaults

By default, all IPv6 multicast groups are displayed for the current VRF instance.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the `ipv6_address` parameter to display entries for a specific multicast group.
- Use the `all-vrf` parameter option to display the MLD group membership table entries that exist in all of the VRF instances on the switch.
- Use the `ipv6 multicast display-interface-names` command to enable displaying the associated IP interface name in the “Vlan/Service” field instead of the VLAN ID or service ID.

Examples

```
-> show ipv6 multicast group ff05::5

Group Address   Source Address Vlan/Service Interface Mode Static Count Life
-----------------------------------------------+-----------------+------------+--------+-------------+--------+------
ff05::5         ::             vlan 21      1/1/19     exclude  no     1      145
```
**IP Multicast Switching Commands**

```
ff05::5 :: service 20 SAP:1/5:10 exclude no 5520 172

-> show ipv6 multicast group service

Total 3 Groups

<table>
<thead>
<tr>
<th>Group Address</th>
<th>Source Address</th>

show ipv6 multicast source

Displays the IPv6 Multicast Switching and Routing source table entries matching the specified IPv6 multicast group address or all entries if no IPv6 multicast group address is specified.

**Syntax Definitions**

- `ipv6_address`: IPv6 multicast group address.
- `vlan [vlan_id]-vlan_id2`: Display source table entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.
- `service [service_id]-service_id2`: Display source table entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- `all-vrf`: Displays source table entries for all of the VRF instances.

**Defaults**

By default, all source table entries are displayed for the current VRF instance.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `ipv6_address` parameter to display entries for a specific multicast group.
- Use the `all-vrf` parameter option to display the MLD source table entries that exist in all of the VRF instances on the switch.
- On an OmniSwitch 9900, this command is available only when IP Multicast Switching and Routing is enabled for the switch. To view the multicast forwarding database on an OmniSwitch 6465 or OmniSwitch 6560 or OmniSwitch 6570M, see the `show ip multicast bridge` and `show ip multicast bridge-forward` commands.
- Use the `ipv6 multicast display-interface-names` command to enable displaying the associated IP interface name in the “Vlan/Service” field instead of the VLAN ID or service ID.
## Examples

`-> show ipv6 multicast source`

**show ipv6 multicast tunnel**

Displays the IPv6 Multicast Switching and Routing tunneling table entries matching the specified IPv6 multicast group address, or all entries if no IPv6 multicast address is specified.

```
show ipv6 multicast tunnel [ipv6_address] [vlan [vlan_id1]-vlan_id2] | service [service_id1]-service_id2] [all-vrf]
```

**Syntax Definitions**

- `ipv6_address` IPv6 multicast group address.
- `vlan [vlan_id1]-vlan_id2` Display tunneling table entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.
- `service [service_id1]-service_id2` Display tunneling table entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.
- `all-vrf` Display the IPv6 tunneling table entries for all of the VRF instances.

**Defaults**

By default, all IPv6 tunnel entries are displayed for the current VRF instance.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

</tbody>
</table>

**Usage Guidelines**

- Use the `ip_address` parameter to display the tunnel entries for a specific multicast group.
- Use the `all-vrf` parameter option to display the IPv6 multicast tunnel entries that exist in all of the VRF instances on the switch.
- Use the `ipv6 multicast display-interface-names` command to enable displaying the associated IP interface name in the “Vlan/Service” field instead of the VLAN ID or service ID.

**Examples**

```
-> show ipv6 multicast tunnel

Total 4 Tunnels

Destination Ingress
Group Address Host Address Tunnel Address Vlan/Service
```
### show ipv6 multicast tunnel

<table>
<thead>
<tr>
<th>Group Address</th>
<th>Host Address</th>
<th>Tunnel Address</th>
<th>Ingress Vlan/Service</th>
</tr>
</thead>
<tbody>
<tr>
<td>ff05::6</td>
<td>4444::2</td>
<td>::</td>
<td>service 20</td>
</tr>
<tr>
<td>ff05::7</td>
<td>4444::2</td>
<td>::</td>
<td>service 20</td>
</tr>
</tbody>
</table>

Total 2 Tunnels

Sample output when the global display interface names option is enabled:

```bash
- show ipv6 multicast display-interface-names
- show ipv6 multicast tunnel vlan
```

```bash
- show ipv6 multicast tunnel service
```

### output definitions

- **Group Address**: IPv6 group address of the IPv6 multicast tunnel.
- **Host Address**: IPv6 host address of the IPv6 multicast tunnel.
- **Destination Tunnel Address**: IPv6 source tunnel address of the IPv6 multicast tunnel.
- **Ingress Vlan/Service**: VLAN or Shortest Path Bridging (SPB) service ID associated with the IP multicast tunnel. If the global display interface names option is enabled, then the IP interface name associated with the IP multicast tunnel is displayed.

### Release History

- Release 7.1.1; command was introduced.
- Release 8.3.1; **all-vrf** parameter added.

Related Commands

**ipv6 multicast host-list**  
Configures a list of host IPv6 addresses that is used for IPv6 multicast group maps and SSM maps.

MIB Objects

*alaIpmsHostListTable*
  *alaIpmsHostListName*
  *alaIpmsHostListAddressType*
  *alaIpmsHostListAddress*
show ipv6 multicast ssm-map

Displays the IPv6 Source Specific Multicast (SSM) mapping configuration for the switch.

show ipv6 multicast ssm-map [vlan vlan_id]

Syntax Definitions

`vlan_id` VLAN for which to display the configuration.

Defaults

By default, all IPv6 multicast SSM mappings configured on the switch are displayed.

Platforms Supported

Not supported in this release.

Usage Guidelines

Specify a VLAN ID to display the configuration information for a specific VLAN.

Examples

```
-> show ipv6 multicast ssm-map
  Type   Id    Group Address/Prefix  Source List Name
  ------------------+----------------------------------
  global  0     ff05::5/128           h-list1
  vlan    200   ff05::6/128           h-list2

-> show ipv6 multicast ssm-map vlan 200
  Type   Id    Group Address/Prefix  Source List Name
  ------------------+----------------------------------
  vlan    200   ff05::6/128           h-list2
```

Release History

Release 8.3.1.R02; command introduced.

Related Commands

ipv6 multicast ssm-map Configures a list of host IP addresses that is used for IP multicast group maps and SSM maps.

MIB Objects

  alaIpmsSsmMapConfigValue
  alaIpmsSsmMapGroupAddress
  alaIpmsSsmMapGroupPrefixLength
  alaIpmsSsmMapSourceListName
**show ipv6 multicast bridge**

Displays the IPv6 multicast bridge table entries that match the specified VLAN, Shortest Path Bridging (SPB) service, IPv6 multicast group address, MAC address, or all entries if no additional parameters are specified.

```
show ipv6 multicast bridge [vlan vlan_id[-vlan_id2] | service [service_id[-service_id2] | ipv6_address | mac_address]] [all-vrf]
```

**Syntax Definitions**

- **vlan [vlan_id][-vlan_id2]** Displays bridge table entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.
- **service [service_id[-service_id2]** Displays bridge table entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- **ipv6_address** IPv6 multicast group address.
- **mac_address** Group MAC address.
- **all-vrf** Display bridge table entries for all of the VRF instances.

**Defaults**

By default, all bridge table entries are displayed for the current VRF instance.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Support</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use one of the optional parameters (`vlan_id`, `service-id`, `ipv6_address`, `mac_address`) to display bridge table entries for a specific multicast group.
- Use the `all-vrf` parameter option to display the source table entries that exist in all of the VRF instances on the switch.
- Based on the forwarding mode set for the switch (ASM, SSM, or MAC):
  - The “Group Address” field will display either a multicast group address (ASM or SSM) or the MAC address for the multicast group (MAC).
  - The “Host Address” field will display zero (MAC) or the IPv6 host address for the bridge entry (ASM or SSM).
**Examples**

`-> show ipv6 multicast bridge vlan 130`

Total 2 Bridge Entries

<table>
<thead>
<tr>
<th>Vlan/Service</th>
<th>Type</th>
<th>Group Address</th>
<th>Host Address</th>
<th>Action</th>
<th>UpTime</th>
</tr>
</thead>
<tbody>
<tr>
<td>vlan 130</td>
<td>asm</td>
<td>ff05::6</td>
<td></td>
<td>forwarding</td>
<td>00h:00m:04s</td>
</tr>
<tr>
<td>service 10</td>
<td>mac</td>
<td>33-33-00-01-01-01</td>
<td></td>
<td>flooding</td>
<td>00h:00m:05s</td>
</tr>
</tbody>
</table>

**output definitions**

- **Vlan/Service**: The VLAN or Shortest Path Bridging (SPB) service ID associated with the IP multicast bridge entry.
- **Type**: The bridge type for the IPv6 multicast bridge entry (asm, ssm, mac). Configured through the `ipv6 multicast forward-mode` command.
- **Group Address**: If the bridge entry type is ASM or SSM, this field displays the destination IP group address; if the bridge entry type is MAC, this field displays the destination MAC address.
- **Host Address**: The source IPv6 host address (only applies to SSM bridge entries, otherwise this field is blank).
- **Action**: The current action taken for the bridge entry (forwarding or filtering).
- **UpTime**: The amount of time that has elapsed since the bridge entry was created.

**Release History**

Release 8.3.1; command introduced.
Release 8.4.1.R02; `service` parameter added.

**Related Commands**

- `show ipv6 multicast bridge-forward`: Displays the forwarding state of the IPv6 multicast bridge table entries.

**MIB Objects**

- `alaIpmsBridgeTable`
  - `alaIpmsBridgeConfigType`
  - `alaIpmsBridgeAddressType`

  - `alaIpmsBridgeGroupAddress`
  - `alaIpmsBridgeHostAddress`
  - `alaIpmsBridgeUpTime`
  - `alaIpmsBridgeAction`
**show ipv6 multicast bridge-forward**

Displays the forwarding state of the IPv6 multicast bridge table entries that match the specified VLAN, Shortest Path Bridging (SPB) service, IPv6 multicast group address, MAC address, or all entries if no additional parameters are specified.

```
show ipv6 multicast bridge-forward [vlan vlan_id]-[vlan_id2] | service [service_id]-[service_id2] | ipv6_address | mac_address] [all-vrf]
```

**Syntax Definitions**

- **vlan [vlan_id]-[vlan_id2]** Displays bridge table entries for the VLAN domain. Optionally enter a VLAN ID or use a hyphen to specify a range of VLAN IDs.
- **service [service_id]-[service_id2]** Displays bridge table entries for the service domain. Optionally enter a service ID or use a hyphen to specify a range of service IDs. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 6570M.*
- **ipv6_address** IPv6 multicast group address.
- **mac_address** Group MAC address.
- **all-vrf** Display bridge table entries for all of the VRF instances.

**Defaults**

By default, all bridge table entries are displayed for the current VRF instance.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use one of the optional parameters (*vlan_id, service_id, ipv6_address, mac_address*) to display forwarding information for a specific multicast group.
- Use the **all-vrf** parameter option to display the source table entries that exist in all of the VRF instances on the switch.
- Based on the forwarding mode set for the switch (ASM, SSM, or MAC):
  - The “Group Address” field will display either a multicast group address (ASM or SSM) or the MAC address for the multicast group (MAC). In the examples for this command, the forwarding mode is changed to MAC to show how the “Group Address” field changes.
  - The “Host Address” field will display zero (MAC) or the IPv6 host address for the bridge entry (ASM or SSM).
Examples

-> show ipv6 multicast bridge-forward vlan 130

Total 2 Bridge Forwarding Entries

<table>
<thead>
<tr>
<th>Vlan/Service</th>
<th>Type</th>
<th>Group Address</th>
<th>Host Address</th>
<th>Next Interface</th>
<th>UpTime</th>
</tr>
</thead>
<tbody>
<tr>
<td>vlan 1</td>
<td>asm-partial</td>
<td>::1.1.2.3</td>
<td></td>
<td>1/4/12</td>
<td>00h:00m:10s</td>
</tr>
<tr>
<td>vlan 130</td>
<td>asm</td>
<td>33-33-ff-ff-ff-ff</td>
<td></td>
<td>1/4/12</td>
<td>00h:00m:07s</td>
</tr>
</tbody>
</table>

-> ipv6 multicast vlan 130 forward-mode mac
-> show ipv6 multicast bridge-forward vlan 130

Total 1 Bridge Forwarding Entries

<table>
<thead>
<tr>
<th>Vlan/Service</th>
<th>Type</th>
<th>Group Address</th>
<th>Host Address</th>
<th>Next Interface</th>
<th>UpTime</th>
</tr>
</thead>
<tbody>
<tr>
<td>vlan 130</td>
<td>mac</td>
<td>33-33-ff-ff-ff-ff</td>
<td></td>
<td>1/3/25</td>
<td>00h:00m:07s</td>
</tr>
</tbody>
</table>

output definitions

Vlan/Service: The VLAN or Shortest Path Bridging (SPB) service ID associated with the IP multicast bridge entry.

Type: The bridge entry type (asm, ssm, mac). Configured through the ipv6 multicast forward-mode command.

Group Address: If the bridge entry type is ASM or SSM, this field displays the destination IPv6 group address; if the bridge entry type is MAC, this field displays the destination MAC address.

Host Address: The source IPv6 host address (only applies to SSM bridge entries, otherwise this field is blank).

Next Interface: The destination interface for the bridge forwarding entry.

UpTime: The amount of time that has elapsed since the bridge forward entry was created.

Release History

Release 8.3.1; command introduced.
Release 8.4.1.R02; service parameter added.
Related Commands

**show ipv6 multicast bridge** Displays the IPv6 multicast bridge table entries.

MIB Objects

alaIpmsBridgeForwardTable

alaIpmsBridgeForwardConfigType, alaIpmsBridgeForwardAddressType, alaIpmsBridgeForwardValue, alaIpmsBridgeForwardType, alaIpmsBridgeForwardGroupAddress, alaIpmsBridgeForwardHostAddress, alaIpmsBridgeForwardNextIfIndex, alaIpmsBridgeForwardNextSubValue alaIpmsBridgeForwardUpTime
show ipv6 multicast bidir-forward

Displays the IPv6 multicast Bidirectional Protocol Independent Multicast (BIDIR-PIM) forwarding table entries for the specified IPv6 multicast group address or all the entries if no IPv6 multicast group address is specified.

show ipv6 multicast bidir-forward [ipv6_address] [all-vrf]

Syntax Definitions

- **ipv6_address**: IPv6 multicast group address.
- **all-vrf**: Display forwarding table entries for all of the VRF instances.

Defaults

By default, BIDIR-PIM forwarding entries for all of the IPv6 multicast groups are displayed for the current VRF instance.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the `ipv6_address` parameter to display BIDIR-PIM forwarding table entries for a specific multicast group.
- Use the `all-vrf` parameter option to display the BIDIR-PIM forwarding table entries that exist in all of the VRF instances on the switch.
- Use the `ipv6 multicast display-interface-names` command to enable displaying the associated IPv6 interface name in the “Vlan/Service” field instead of the VLAN ID or service ID.

Examples

-> vrf vrf-1 show ipv6 multicast bidir-forward

VRF:vrf-1  Total 3 Forwards

<table>
<thead>
<tr>
<th>Egress</th>
<th>Group Address</th>
<th>Vlan/Service</th>
<th>Interface</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>ff05::6</td>
<td>vlan 30</td>
<td>1/2/1</td>
</tr>
<tr>

  - `alaIpmsForwardNextConfigType`
  - `alaIpmsForwardNextValue`
  - `alaIpmsForwardNextIfIndex`
  - `alaIpmsForwardNextType`
show ipv6 multicast profile

Displays a list of available IPMS configuration profiles or the parameter settings for a specific profile.

**show ipv6 multicast profile [profile_name]**

**Syntax Definitions**

**profile_name**

The name of an existing IPMS profile.

**Defaults**

By default, a list of available profiles is displayed.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td></td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

The specified profile name must already exist in the switch configuration.

**Examples**

-> show ipv6 multicast profile

Total 2 Profiles

Profile Name
-----------------------
default
IGMPv3 with Zapping

-> show ip multicast profile "IGMPv3 with Zapping"

This chapter includes CLI command descriptions for Distance Vector Multicast Routing Protocol (DVMRP), version 3.

DVMRPv3 is a dense-mode multicast routing protocol that enables routers to efficiently propagate IP multicast traffic through a network. Multicast traffic consists of a data stream that originates from a single source and is sent to hosts that have subscribed to that stream. Live video broadcasts, video conferencing, corporate communications, distance learning, and distribution of software, stock quotes, and news services are examples of multicast traffic.

For more information about configuring DVMRP, see the applicable OmniSwitch AOS Release 8 Advanced Routing Configuration Guide.

MIB information for the DVMRP commands is as follows:

- **Filename**: ALCATEL-IND1-VIRTUALROUTER-MIB.mib  
  **Module**: alcatelIND1VirtualRouterMIB

- **Filename**: ALCATEL-IND1-DVMRP-MIB.mib  
  **Module**: alcatelIND1DVMRPMIB

- **Filename**: DVMRP-STD-MIB.mib  
  **Module**: dvmrpStdMIB

A summary of the available commands is listed here:

```
ip load dvmrp
ip dvmrp admin-state
ip dvmrp flash-interval
ip dvmrp graft-timeout
ip dvmrp interface
ip dvmrp interface metric
ip dvmrp interface mbr-default-information
ip dvmrp neighbor-interval
ip dvmrp neighbor-timeout
ip dvmrp prune-lifetime
ip dvmrp prune-timeout
ip dvmrp report-interval
ip dvmrp route-holddown
ip dvmrp route-timeout
ip dvmrp subord-default
show ip dvmrp
show ip dvmrp interface
show ip dvmrp neighbor
show ip dvmrp nexthop
show ip dvmrp prune
show ip dvmrp route
show ip dvmrp tunnel
```
**ip load dvmrp**

Dynamically loads DVMRP to memory.

**Syntax Definitions**

N/A

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

This command must be executed before DVMRP can be configured on the switch. In addition, DVMRP must be administratively enabled before you can run the protocol on the switch. For more information, refer to the `ip dvmrp admin-state` command on page 33-3.

**Examples**

```
-> ip load dvmrp
```

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `ip dvmrp admin-state`  Globally enables or disables DVMRP protocol on the switch.

**MIB Objects**

- `alaVrConfigTable`
  - `alaVrConfigDvmrpStatus`
**ip dvmrp admin-state**

Globally enables or disables DVMRP protocol on the switch.

`ip dvmrp admin-state {enable | disable}`

---

**Syntax Definitions**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>Administratively enables DVMRP on the switch.</td>
</tr>
<tr>
<td>disable</td>
<td>Administratively disables DVMRP on the switch.</td>
</tr>
</tbody>
</table>

**Defaults**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- This command must be set to `enable` before DVMRP can run on the switch. In addition, the `ip load dvmrp` command must be issued. For more information, refer to the `ip load dvmrp` command on page 33-2.

- To enable or disable DVMRP for a particular interface, refer to the `ip dvmrp interface` command on page 33-7.

**Examples**

- `-> ip dvmrp admin-state enable`
- `-> ip dvmrp admin-state disable`

**Release History**

Release 7.1.1; command was introduced.
Related Commands

- **ip dvmrp interface**
  Enables or disables the DVMRP protocol on a specified interface.
- **ip load dvmrp**
  Dynamically loads DVMRP to memory.
- **show ip dvmrp**
  Displays global DVMRP parameters, including current status.

MIB Objects

- **alaDvmrpGlobalConfig**
- **alaDvmrpAdminStatus**
ip dvmrp flash-interval

Configures the minimum flash update interval value. The flash update interval defines how often routing table change messages are sent to neighboring DVMRP routers.

`ip dvmrp flash-interval seconds`

**Syntax Definitions**

`seconds` Specifies the interval value, in seconds (5–86400).

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>5</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Because routing table change messages are sent between the transmission of complete routing tables, the flash update interval value must be lower than the route report interval.

**Examples**

`-> ip dvmrp flash-interval 5`

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `show ip dvmrp` Displays global DVMRP parameters.

**MIB Objects**

- `alaDvmrpGlobalConfig`
- `alaDvmrpFlashUpdateInterval`
ip dvmrp graft-timeout

Configures the graft message retransmission value. The graft message retransmission value is the duration of time that the routing switch will wait before retransmitting a graft message if it has not received an acknowledgement from its neighbor.

**ip dvmrp graft-timeout seconds**

---

**Syntax Definitions**

*seconds* Specifies the graft message retransmission value, in seconds (5–86400).

---

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>5</td>
</tr>
</tbody>
</table>

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

N/A

---

**Examples**

-> ip dvmrp graft-timeout 5

---

**Release History**

Release 7.1.1; command was introduced.

---

**Related Commands**

*show ip dvmrp* Displays global DVMRP parameters.

---

**MIB Objects**

alaDvmrpGlobalConfig
alaDvmrpGraftRetransmission
**ip dvmrp interface**

Enables or disables the DVMRP protocol on a specified interface.

```
ip dvmrp interface {interface_name}
no ip dvmrp interface {interface_name}
```

**Syntax Definitions**

- `interface_name` The name of the interface.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
</tr>
</thead>
<tbody>
<tr>

<td></td>
<td>X48C6/T48C6/</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>X48C4E/V48C8/C32E/T24C2/</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>X24C2</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use the **no** form of this command to delete an interface.

**Examples**

- `-> ip dvmrp interface vlan-10`
- `-> no ip dvmrp interface vlan-10`

**Release History**

Release 7.1.1; command was introduced.
**Related Commands**

- `ip dvmrp admin-state` - Globally enables or disables the DVMRP protocol on the switch.
- `ip dvmrp interface metric` - Configures the distance metric for an interface, which is used to calculate distance vectors.
- `show ip dvmrp interface` - Displays information for all multicast-capable interfaces.

**MIB Objects**

- `dvmrpInterfaceTable`
  - `dvmrpInterfaceLocalAddress`
  - `dvmrpInterfaceStatus`
**ip dvmrp interface metric**

Configures the distance metric for an interface, which is used to calculate distance vectors. DVMRP uses the distance metric value to determine the most cost-effective way to pass data through the network.

`ip dvmrp interface interface_name metric value`

---

**Syntax Definitions**

- `interface_name` The name of the interface.
- `value` Specifies the metric value (1–31).

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>1</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

DVMRP uses the distance metric value to determine the most cost-effective way to pass data through the network. The higher the distance metric value, the higher the cost.

**Examples**

```plaintext
-> ip dvmrp interface vlan-2 metric 1
```

**Release History**

Release 7.1.1; command was introduced.
Related Commands

**ip dvmrp interface**
Enables or disables the DVMRP protocol on a specified interface.

**show ip dvmrp interface**
Displays the DVMRP interface table.

MIB Objects

dvmrpInterfaceTable
  dvmrpInterfaceLocalAddress
  dvmrpInterfaceMetric
**ip dvmrp interface mbr-default-information**

Configures a DVMRP interface to advertise the default route for the interface. This command only applies when the local switch is operating in the Multicast Border Router (MBR) mode.

```plaintext
ip dvmrp interface interface_name mbr-default-information {enable | disable}
```

**Syntax Definitions**

- **interface_name**: The name of the interface.
- **enable**: Enables advertisement of the default route on the specified interface.
- **disable**: Disables advertisement of the default route on the specified interface.

**Defaults**

By default, advertising the default route is disabled.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Advertising a default route on the DVMRP interface provides a method for ensuring that sources inside the PIM domain can reach all routers inside the DVMRP domain.
- Make sure that the default route is not advertised on the MBONE.

**Examples**

```plaintext
-> ip dvmrp interface mbr-default-information enable
-> ip dvmrp interface mbr-default-information disable
```

**Release History**

Release 7.3.2; command was introduced.
Related Commands

- **ip dvmrp interface**: Enables or disables the DVMRP protocol on a specified interface.
- **show ip dvmrp interface**: Displays the DVMRP interface table.

MIB Objects

- **alaDvmrpIfAugTable**
- **alaDvmrpIfMbrDefaultInfoStatus**
**ip dvmrp neighbor-interval**

Configures the neighbor probe interval time. The neighbor probe interval time specifies how often probes are transmitted on DVMRP-enabled interfaces.

`ip dvmrp neighbor-interval seconds`

---

**Syntax Definitions**

`seconds` Specifies the probe interval time, in seconds (5–30).

---

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>10</td>
</tr>
</tbody>
</table>

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

N/A

---

**Examples**

```
-> ip dvmrp neighbor-interval 10
```

---

**Release History**

Release 7.1.1; command was introduced.

---

**Related Commands**

- `ip dvmrp neighbor-timeout` Configures the neighbor timeout.
- `show ip dvmrp neighbor` Displays the DVMRP neighbor table.
- `show ip dvmrp` Displays the global DVMRP parameters.

---

**MIB Objects**

- `alaDvmrpGlobalConfig`
- `alaDvmrpNeighborProbeInterval`
**ip dvmrp neighbor-timeout**

Configures the neighbor timeout. This value specifies how long the switch will wait for activity from a neighboring DVMRP router before assuming that the inactive router is down.

`ip dvmrp neighbor-timeout seconds`

---

**Syntax Definitions**

`seconds` Specifies the neighbor timeout, in seconds (5–86400).

---

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>

- `show ip dvmrp` Displays the global DVMRP parameters.

---

**MIB Objects**

- `alaDvmrpGlobalConfig`
- `alaDvmrpNeighborTimeout`
**ip dvmrp prune-lifetime**

Indicates the length of time a prune will be in effect—i.e., its *lifetime*. When the prune lifetime expires, the interface is joined back onto the multicast delivery tree. If unwanted multicast datagrams continue to arrive, the prune mechanism will be re-initiated and the cycle will continue.

```
ip dvmrp prune-lifetime seconds
```

### Syntax Definitions

```
seconds
```

Specifies the prune lifetime, in seconds (180–86400).

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>7200</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>

Examples

-> ip dvmrp route-timeout 140

Release History

Release 7.1.1; command was introduced.
DVMRP Commands

ip dvmrp route-timeout

Related Commands

- **ip dvmrp route-holddown**  Configures the time during which DVMRP routes are kept in a hold down state.
- **show ip dvmrp**  Displays the global DVMRP parameters.

MIB Objects

- **alaDvmrpGlobalConfig**
  - **alaDvmrpRouteExpirationTimeout**
**ip dvmrp subord-default**

Changes the initial default assumption on a neighbor's subordinate or non-subordinate status. When the status value is true, DVMRP neighbors are assumed to be subordinate and traffic is automatically forwarded to the neighbor upon initial discovery. When the value is false, traffic is not forwarded to the neighbor until route reports have been exchanged and the neighbor has explicitly expressed dependency.

```
ip dvmrp subord-default {true | false}
```

---

**Syntax Definitions**

**true**

DVMRP neighbors are assumed subordinate; traffic is automatically forwarded to the neighbor on initial discovery.

**false**

DVMRP neighbors are *not* assumed to be subordinate; traffic is not forwarded until route reports have been exchanged and the neighbor has explicitly expressed dependency.

---

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>true</td>
<td>false</td>
</tr>
</tbody>
</table>

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- However, if neighbors in the DVMRP domain have difficulty handling large initial bursts of traffic, it is recommended that the neighbor's default status as a subordinate be changed to false.

- To view the current subordinate neighbor status, use the `show ip dvmrp` command.

---

**Examples**

```
-> ip dvmrp subord-default false
```

---

**Release History**

Release 7.1.1; command was introduced.
Related Commands

**show ip dvmrp interface**

Displays information for all multicast-capable interfaces or for a specified interface. This command also provides options to display only DVMRP-enabled or DVMRP-disabled interfaces.

`show ip dvmrp interface [ip_address | interface_name | enabled | disabled]

---

**Syntax Definitions**

- `ip_address`: Specifies a particular interface IP address.
- `interface_name`: The name of the interface.
- `enabled`: Displays a list of all interfaces (i.e., VLAN router ports) on which DVMRP is currently enabled.
- `disabled`: Displays a list of all interfaces (i.e., VLAN router ports) on which DVMRP is currently disabled.

---

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- If no optional syntax is specified in the command line, the entire interface table is displayed.
- For an interface to show as `enabled` in the `show ip dvmrp interface` or `show ip dvmrp interface enabled` output, the interface must be both administratively and operationally enabled. Although the interface does not have to be passing traffic, at least one VLAN router port must be operational on the corresponding DVMRP-enabled VLAN.
- To view the Generation ID being used on a particular interface, you must include the interface IP address in the command line.

**Examples**

```
-> show ip dvmrp interface

Total 4 Interfaces

Interface Name  Vlan  Metric  Admin-Status  Oper-Status  BFD-Status  MBR-Default
-----------------+-----+------+--------------+-------------+----------+-----------
 vlan-4 4 1  Disabled  Disabled  Disabled  Disabled
```
DVMRP Commands

show ip dvmrp interface

```
  vlan-6  6  1  Enabled  Enabled  Disabled  Enabled
```

-> show ip dvmrp interface enabled

Total 1 Interfaces

<table>

</tr>
</tbody>
</table>

**Usage Guidelines**

If a neighbor IP address is not specified, the entire DVMRP Neighbor Table is displayed.

**Examples**

```
-> show ip dvmrp neighbor
```

```
Neighbor Address   Intf Name     Uptime      Expires     GenID     Vers  State
----------------+-------------+-----------+-----------+----------+------+-------
143.209.92.214 vlan-2 00h:09m:12s 00h:00m:06s 546947509 3.255 active
```

**output definitions**

- **Neighbor Address**: The 32-bit IP address of the DVMRP neighbor’s router interface.
- **Intf Name**: The interface name of the neighbor’s router.
- **Uptime**: The amount of time the neighbor has been running, displayed in hours, minutes, and seconds.
- **Expires**: The amount of time remaining before the neighbor expires, displayed in hours, minutes, and seconds.
- **GenID**: The generation ID for the DVMRP neighbor. This value is used by neighboring routers to detect whether the DVMRP routing table should be resent.

- **Source Address/Mask**: The 32-bit source IP address, along with the mask length, shown in bits. The source IP address and mask are separated by a slash (/).
- **Expires**: The amount of time remaining before the current prune state expires, displayed in hours, minutes, and seconds.

### Release History

Release 7.1.1; command was introduced.
**Related Commands**

- `ip dvmrp prune-lifetime` Indicates the length of time a prune will be in effect.
- `ip dvmrp prune-timeout` Configures the prune packet retransmission value.

**MIB Objects**

dvmrpPruneTable
  
dvmrpPruneGroup
dvmrpPruneSource
dvmrpPruneSourceMask
dvmrpPruneExpiryTime
show ip dvmrp route

Displays the DVMRP routes that are being advertised to other routers.

show ip dvmrp route [ip_address ip_mask]

Syntax Definitions

ip_address The 32-bit source IP address representing route(s).
ip_mask A 32-bit number that determines the subnet mask for the IP address.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 C32E/T48C6</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

Usage Guidelines

If a source IP address and IP mask are not specified, the entire DVMRP route table is displayed.

Examples

-> show ip dvmrp route

Legends: Flags: L = Local, R = Remote, F = Flash, H = Holddown, I = Invalid

<table>
<thead>
<tr>
<th>Address/Mask</th>
<th>Gateway</th>
<th>Metric</th>
<th>Age</th>
<th>Expires</th>
<th>Flags</th>
</tr>
</thead>
<tbody>
<tr>
<td>11.0.0.0/8</td>
<td>55.0.0.5</td>
<td>2</td>
<td>00h:13m:14s</td>
<td>02m:07s</td>
<td>R</td>
</tr>
<tr>
<td>22.0.0.0/8</td>
<td>44.0.0.4</td>
<td>2</td>
<td>00h:33m:14s</td>
<td>02m:15s</td>
<td>R</td>
</tr>
<tr>
<td>44.0.0.0/8</td>
<td>-</td>
<td>1</td>
<td>05h:24m:59s</td>
<td>-</td>
<td>L</td>
</tr>
<tr>
<td>55.0.0.0/8</td>
<td>-</td>
<td>1</td>
<td>05h:24m:59s</td>
<td>-</td>
<td>L</td>
</tr>
<tr>
<td>66.0.0.0/8</td>
<td>44.0.0.4</td>
<td>2</td>
<td>00h:03m:11s</td>
<td>02m:15s</td>
<td>R</td>
</tr>
</tbody>
</table>

output definitions

Address/Mask The 32-bit IP address for the router interface, along with the corresponding subnet mask. The interface’s subnet mask is shown using the CIDR prefix length: 255.0.0.0 equals /8; 255.255.0.0 equals /16; 255.255.255.0 equals /24, etc.

Gateway The corresponding 32-bit gateway address. Because it is not applicable, no gateway address is displayed for local routes.
output definitions (continued)

<table>
<thead>
<tr>
<th>Metric</th>
<th>The current metric value. A metric is essentially used to determine the most cost-effective way to pass data through the network. The higher the metric value, the higher the cost.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Age</td>
<td>The current age of the DVMRP route, displayed in hours, minutes, and seconds.</td>
</tr>
<tr>
<td>Expires</td>
<td>The expiration time for the corresponding route. Because it is not applicable, no expiration time is displayed for local routes.</td>
</tr>
<tr>
<td>Flags</td>
<td>The flag type of a particular DVMRP route. Options include L (Local), R (Remote), F (Flash), H (Holddown), and I (Invalid).</td>
</tr>
</tbody>
</table>

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `ip dvmrp report-interval` Configures the route report interval.
- `ip dvmrp route-holdown` Configures the time during which DVMRP routes are kept in a hold down state.
- `ip dvmrp route-timeout` Configures the route expiration timeout value.

**MIB Objects**

- `dvmrpRouteTable`
- `dvmrpRouteSource`
- `dvmrpRouteSourceMask`
- `dvmrpRouteMetric`
- `dvmrpRouteExpiryTime`
- `dvmrpRouteUpTime`
show ip dvmrp tunnel

Displays DVMRP tunnel entries.

show ip dvmrp tunnel [local_address remote_address]

Syntax Definitions

| local_address | The IP address of a particular local router interface. The local router interface IP address is an identifier for the local end of the DVMRP tunnel. |
| remote_mask | The IP address of a particular remote router interface. The remote router interface IP address is an identifier for the remote end of the DVMRP tunnel. |

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td></td>
</tr>
</tbody>
</table>

Usage Guidelines

- If optional local and remote IP address information is not specified, entire DVMRP Tunnels table is displayed.
- The local IP address of the tunnel must match the IP address of an existing DVMRP-enabled IP interface.

Examples

-> show ip dvmrp tunnel

<table>
<thead>
<tr>
<th>Interface Name</th>
<th>Local Address</th>
<th>Remote Address</th>
<th>TTL</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>vlan-2</td>
<td>143.209.92.203</td>
<td>12.0.0.1</td>
<td>255</td>
<td>Enabled</td>
</tr>
</tbody>
</table>

output definitions

- Interface Name: The interface name.
- Local Address: The 32-bit local IP address for the DVMRP tunnel.
- Remote Address: The 32-bit remote IP address for the DVMRP tunnel.
**output definitions (continued)**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TTL</td>
<td>The current Time to Live (TTL) value. A value of 0 indicates that the value is copied from the payload’s header. Valid range from 0–255.</td>
</tr>
<tr>
<td>Status</td>
<td>The corresponding interface status. Options include Enabled or Disabled. If the interface specified by the local address has been configured and is operationally enabled, the status is Enabled. If the interface is down, the value displayed is Disabled.</td>
</tr>
</tbody>
</table>

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `ip interface tunnel` Adds or deletes a DVMRP tunnel.
- `show ip dvmrp` Configures the TTL value for the tunnel defined for the specified local address and remote address.

**MIB Objects**

- `tunnelIfTable`
  - `tunnelIfLocalAddress`
  - `tunnelIfRemoteAddress`
  - `tunnelIfHopLimit`
- `dvmrpInterfaceGroup`
  - `dvmrpInterfaceStatus`
Protocol-Independent Multicast (PIM) is an IP multicast routing protocol that uses routing information provided by unicast routing protocols, such as RIP and OSPF. Note that PIM is not dependent on any particular unicast routing protocol. Sparse mode PIM (PIM-SM) contrasts with flood-and-prune dense mode multicast protocols, such as DVMRP and PIM Dense Mode (PIM-DM), in that multicast forwarding in PIM-SM is initiated only through specific requests.

Downstream routers must explicitly join PIM-SM distribution trees to receive multicast streams on behalf of directly connected receivers or other downstream PIM-SM routers. This paradigm of receiver-initiated forwarding makes PIM ideal for network environments where receiver groups are thinly populated and bandwidth conservation is a concern, such as in wide area networks (WANs).

PIM-SIM builds unidirectional shared trees that are rooted at a Rendezvous Point (RP) multicast router. Bidirectional PIM (BIDIR-PIM) is a variant of PIM-SM that builds bidirectional shared trees also rooted at an RP. However, BIDIR-PIM forwards packets from the source to the RP without the overhead of encapsulation or source-specific states.

PIM-DM uses RPF (Reverse Path Forwarding) to prevent looping of multicast datagrams while flooding. If some areas of the network do not have group members, PIM-DM will prune the forwarding branch by instantiating the prune state.

PIM-DM differs from PIM-SM in two essential ways:

- There are no periodic joins transmitted, only explicitly triggered prunes and grafts.
- There is no Rendezvous Point (RP). This is particularly important in networks that cannot tolerate a single point of failure.

The OmniSwitch implementation of PIM can also be configured in an IPv6 environment.

MIB information for the PIM commands is as follows:

<table>
<thead>
<tr>

**ip load pim**

Dynamically loads PIM to memory.

**ip load pim**

---

**Syntax Definitions**

N/A

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

- **show ip pim dense**: Displays the status of the various global parameters for the PIM Dense mode.
- **ipv6 pim sparse admin-state**: Enables or disables IPv6 PIM-SM (sparse mode) globally for IPv6.
- **ipv6 pim bidir admin-state**: Enables or disables IPv6 BIDIR-PIM (bidirectional) globally for IPv6.
- **show ipv6 pim sparse**: Displays the status of the various global parameters for the IPv6 PIM sparse mode.
- **ipv6 pim dense admin-state**: Enables or disables the IPv6 PIM-DM (dense mode) globally for IPv6.
- **show ipv6 pim dense**: Displays the status of the various global parameters for the IPv6 PIM dense mode.

MIB Objects

- **alaVrConfigTable**
  - **alaVrConfigPimStatus**
ip pim sparse admin-state

Globally enables or disables PIM-SM protocol on the switch.

`ip pim sparse admin-state {enable | disable}`

### Syntax Definitions

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>Globally enables PIM-SM on the switch.</td>
</tr>
<tr>
<td>disable</td>
<td>Globally disables PIM-SM on the switch.</td>
</tr>
</tbody>
</table>

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- This command must be set to `enable` before PIM-SM can run on the switch. In addition, the `ip load pim` command must be executed. Refer to page 34-3 for more information.
- The advanced routing image file must be loaded to flash before the feature will start to work on the switch.

### Examples

```
-> ip pim sparse admin-state enable
-> ip pim sparse admin-state disable
```

### Release History

Release 7.1.1; command was introduced.
**Related Commands**

- **ip pim interface**
  Enables or disables the PIM protocol on a specific interface.
- **ip load pim**
  Dynamically loads PIM to memory.
- **show ip pim sparse**
  Displays the status of the various global parameters for the PIM sparse mode.

**MIB Objects**

- **alaPimsmGlobalConfig**
  - **alaPimsmAdminStatus**
ip pim bidir admin-state

Globally enables or disables the BIDIR-PIM protocol on the switch.

ip pim bidir admin-state {enable | disable}

----

**Syntax Definitions**

<table>
<thead>
<tr>
<th>enable</th>
<th>Globally enables BIDIR-PIM on the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>disable</td>
<td>Globally disables BIDIR-PIM on the switch.</td>

**Usage Guidelines**

- This command must be set to `enable` before PIM-DM can run on the switch. In addition, the `ip load pim` command must be executed. Refer to page 34-3 for more information.

- The advanced routing image file must be loaded to flash before the feature will start to work on the switch.

**Examples**

- `-> ip pim dense admin-state enable`
- `-> ip pim dense admin-state disable`

**Release History**

Release 7.1.1; command was introduced.
**Related Commands**

- **ip pim interface**
  Enables or disables the PIM protocol on a specific interface.

- **ip load pim**
  Dynamically loads PIM to memory.

- **show ip pim dense**
  Displays the status of the various global parameters for the PIM dense mode.

**MIB Objects**

- **alaPimdmGlobalConfig**
- **alaPimdmAdminStatus**
**ip pim rp-hash admin-state**

Configures the version of the hashing algorithm that the Rendezvous Point (RP) hashing function will use to select an RP.

```
ip pim rp-hash admin-state {enable | disable}
```

---

**Syntax Definitions**

<table>
<thead>
<tr>
<th>enable</th>
<th>Applies the newer version of the hashing algorithm.</th>
</tr>
</thead>
<tbody>
<tr>
<td>disable</td>
<td>Applies the legacy version of the hashing algorithm.</td>
</tr>
</tbody>
</table>

---

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- The RP hashing function is applied when selecting an RP from two or more equal group-range-to-RP mappings.

- To maintain interoperability between PIM routers, make sure all routers have the same setting for the RP hash function. For example, this function is enabled for all PIM routers or this function is disabled for all PIM routers.

---

**Examples**

```
-> ip pim rp-hash admin-state enable
-> ip pim rp-hash admin-state disable
```

---

**Release History**

Release 7.3.4; command was introduced.
**Related Commands**

*show ip pim sparse* Displays the status of the various global parameters for the PIM sparse mode.

**MIB Objects**

alaPimsmGlobalConfig
alaPimsmRPHashStatus

**ip pim ssm group**

Statically maps the specified IP multicast group(s) to the PIM Source Specific Multicast mode (SSM).

```
ip pim ssm group group_address/prefix_length [no] override [priority priority]
no ip pim ssm group group_address/prefix_length
```

### Syntax Definitions

- **group_address** Specifies a 32-bit group address.
- **/prefix_length** Specifies the prefix length of the multicast group.
- **override** Specifies the static SSM mode mapping configuration to override the dynamically learned group mapping information for the specified group(s).
- **priority** Specifies the preference value to be used for this static SSM mode configuration and provides fine control over which configuration is overridden by this static configuration. Values may range from 0 to 128.

### Defaults

By default, the priority option is not set and the override option is set to false.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of this command to remove a static configuration of a SSM mode group mapping.
- The PIM Source-Specific Multicast (SSM) mode for the default SSM address range (232.0.0.0 through 232.255.255.255) reserved by the Internet Assigned Numbers Authority is not enabled automatically and needs to be configured manually to support SSM.
- You can also map additional multicast address ranges for the SSM group using this command. However, the multicast groups in the reserved address range can be mapped only to the SSM mode.
- If the group prefixes configured for two or more rows in this table overlap, the row with the greatest prefix length value is used for the overlapping range.
- Specifying the priority value obsoletes the `override` option.
- Note that once the priority option has been defined, a value of 65535 can be used to unset the priority.
**Examples**

`-> ip pim ssm group 225.0.0.0/24 priority 50`

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `show ip pim sparse`: Displays the status of the various global parameters for the PIM sparse mode.
- `show ip pim ssm group`: Displays the static configuration of multicast group mappings for the PIM-Source Specific Multicast (SSM) mode.
- `show ip pim group-map`: Displays the PIM group mapping table.

**MIB Objects**

- `pimStaticRPTable`:
  - `pimStaticRPGrpAddress`
  - `pimStaticRPGrpPrefixLength`
  - `pimStaticRPImMode`
  - `pimStaticRPPrecedence`
  - `pimStaticRPOverrideDynamic`
  - `pimStaticRPRowStatus`
**ip pim dense group**

Statically maps the specified IP multicast group(s) to the PIM Dense mode (DM).

```
ip pim dense group group_address/prefix_length [no] override [priority priority]
```

```
no ip pim dense group group_address/prefix_length
```

**Syntax Definitions**

- **group_address**
  Specifies a 32-bit group address.

- **/prefix_length**
  Specifies the prefix length of the multicast group.

- **override**
  Specifies that this static Dense mode mapping configuration should override the dynamically learned group mapping information for the specified group(s).

- **priority**
  Specifies the preference value to be used for this static configuration and provides fine control over which configuration is overridden by this static configuration. Values may range from 0 to 128.

**Defaults**

By default, the priority option is not set and the override option is set to false.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove a static configuration of a dense mode group mapping.
- This command specifies the mode as Dense (PIM-DM) for the specified multicast group address.
- If the group prefixes configured for two or more rows in this table overlap, the row with the greatest prefix length value is used for the overlapping range.
- Specifying the priority value obsoletes the **override** option and once the priority option has been defined, a value of 65535 can be used to unset the priority.

**Examples**

```
-> ip pim dense group 225.0.0.0/24 priority 50
```
**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `show ip pim dense` Displays the status of the various global parameters for the PIM dense mode.
- `show ip pim dense group` Displays the static configuration of multicast group mappings for PIM-Dense Mode (DM).
- `show ip pim group-map` Displays the PIM group mapping table.

**MIB Objects**

- `alaPimdmDenseGroupTable`  
  - `alaPimdmDenseGroupGrpAddress`
  - `alaPimdmDenseGroupGrpPrefixLength`
  - `alaPimdmDenseGroupOverrideDynamic`
  - `alaPimdmDenseGroupPrecedence`
  - `alaPimdmDenseGroupRowStatus`
**ip pim cbsr**

Configures the local router as the Candidate-BSR for the PIM domain.

```
ip pim cbsr ip_address [priority priority] [mask-length bits]
```

```
o ip pim cbsr ip_address
```

---

**Syntax Definitions**

- **ip_address** Specifies the 32-bit address that the local router uses to advertise itself as a Candidate-BSR.
- **priority** Specifies the priority value of the local router as a Candidate-BSR. The higher the value, the higher the priority. Values may range from 0–255.
- **bits** Specifies a 32-bit mask length that is advertised in the bootstrap messages (the length of the mask is used in the hash function when computing the Rendezvous Point (RP) for a multicast group). Values may range from 1–32.

---

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>priority</td>
<td>64</td>
</tr>
<tr>
<td>bits</td>
<td>30</td>
</tr>
</tbody>
</table>

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- Use the `no` form of this command to remove the local routers candidature as the BSR.
- This command is supported only in the sparse mode.
- The information configured using this command is used in the Bootstrap messages.
- Candidate-BSRs also avoid a single point of failure in a PIM domain.

---

**Examples**

```
-> ip pim cbsr 50.1.1.1 priority 100 mask-length 4
```
**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `show ip pim cbsr` Displays the Candidate-BSR information that is used in the Bootstrap messages.

**MIB Objects**

- `pimBsrCandidateBSRTable`
  - `pimBsrCandidateBSRAAddress`
  - `pimBsrCandidateBSRPriority`
  - `pimBsrCandidateBSRHashMaskLength`
  - `pimBsrCandidateBSRRowStatus`
**ip pim static-rp**

Adds, modifies, or deletes a static RP for a group (“modifies” applies only to the RP address, since the table is indexed from group address and mask parameters).

```
ip pim static-rp group_address/prefix_length rp_address [[no] bidir] [[no] override] [priority priority]
no ip pim static-rp group_address/prefix_length rp_address
```

### Syntax Definitions

- `group_address`  
  Specifies a 32-bit group address.
- `/prefix_length`  
  Specifies the prefix length of the multicast group.
- `rp_address`  
  Specifies a 32-bit Rendezvous Point (RP) address.
- `bidir`  
  Creates the static RP entry for use in the Bidirectional PIM (BIDIR-PIM) mode.
- `override`  
  Specifies this static RP configuration to override the dynamically learned RP information for the specified group(s).
- `priority`  
  Specifies the preference value to be used for the static RP configuration and provides fine control over which configuration is overridden by this static configuration. Values may range from 0 to 128.

### Defaults

By default, the `priority` option is not set, the `override` option is set to false, and the `bidir` option is set to false.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of this command to delete a static RP configuration.
- Specifying the priority value obsoletes the `override` option.
- If the `bidir` parameter option is not specified with this command, the static RP entry is created for use in the ASM mode.
- The PIM Source-Specific Multicast (SSM) mode for the default SSM address range (232.0.0.0 through 232.255.255.255) reserved by the Internet Assigned Numbers Authority is not enabled automatically and must be configured manually to support SSM. You can also map additional multicast address
ranges for the SSM group. However, the multicast groups in the reserved address range can be mapped only to the SSM mode.

- This command is supported only in the sparse mode.
- If the group prefixes configured for two or more rows in this table overlap, the row with the greatest prefix length value is used for the overlapping range.
- Note that once the priority option has been defined, a value of 65535 can be used to unset the priority.
- To view current static RP configuration settings, use the `show ip pim static-rp` command.

**Examples**

- `-> ip pim static-rp 225.0.0.0/24 10.1.1.1 priority 10`
- `-> ip pim static-rp 225.0.0.0/24 10.1.1.1 bidir override`
- `-> no ip pim static-rp 225.0.0.0/24 10.1.1.1`

**Release History**

Release 7.1.1; command was introduced.
Release 7.3.4; `bidir` parameter added.

**Related Commands**

- `show ip pim sparse` Displays the status of the various global parameters for the PIM sparse mode.
- `show ip pim static-rp` Displays the PIM static RP table for ASM mode, which includes the group address/prefix length, the static Rendezvous Point (RP) address, and the current status of the static RP configuration (i.e., enabled or disabled).
- `show ip pim group-map` Displays the PIM group mapping table.

**MIB Objects**

- `pimStaticRPTable`
  - `pimStaticRPGrpAddress`
  - `pimStaticRPGrpPrefixLength`
  - `pimStaticRPGrpAddress`
  - `pimStaticRPGrpPrefixLength`
  - `pimStaticRPGrpMode`
  - `pimStaticRPGrpOverrideDynamic`
  - `pimStaticRPGrpPrecedence`
  - `pimStaticRPGrpRowStatus`
**ip pim anycast-rp**

Configures the anycast RP set, which is the set of all routers that would act as the RP.

```plaintext
ip pim anycast-rp anycast_rp_address rp_address
no ip pim anycast-rp anycast_rp_address rp_address
```

### Syntax Definitions

- **anycast-rp-address**: Specifies the anycast RP address.
- **rp_address**: Specifies a 32-bit Rendezvous Point (RP) address of a router that is a member of the anycast RP set.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the no form of this command to delete an anycast RP configuration.
- The RP specified by anycast-RP-address is the RP in the anycast RP set. This address must be the same as the RP address in the Static-RP configuration used with the `ip pim static-rp` command if static RP configuration is being used.
- It is recommended not to use Loopback0 as the anycast RP address since Loopback0 is often used as the Router ID by default with the unicast routing protocols. Hence, it is recommended to use one of the additional LoopbackX interfaces for the anycast RP address, but it is not mandatory to be a LoopbackX address.
- The RP specified by rp-address defines the IP address of the prospective RP. This address must be different than the anycast RP address and is used in communication between the different RPs in the anycast RP set. This configuration must be the same on all routers in the Anycast-RP set.
- There must be a separate entry for each of the RPs participating in anycast RP set, including an entry for the local router. This configuration defining the anycast RP set must be the same on all routers participating in anycast RP.
- It is recommended to configure PIM register rate limiting (see `ip pim register-rate-limit`) to limit the sending of PIM register messages with Anycast RP.
- Ensure SPT is enabled (see `ip pim spt admin-state`) when using Anycast RP. If SPT is globally disabled, and Anycast RP configuration is added, this configuration will be ignored for all groups that are operating in Anycast-RP mode.

**Examples**

- `-> ip pim static-rp 224.0.0.0/4 10.10.10.1`  
- `-> ip pim anycast-rp 10.10.10.1 10.1.1.1`  
- `-> ip pim anycast-rp 10.10.10.1 10.1.1.2`  
- `-> no ip pim anycast-rp 10.10.10.1 10.1.1.2`

**Release History**

Release 8.6R2; command introduced.

**Related Commands**

- `ip pim static-rp`  
  Adds, modifies, or deletes a static RP for a group (“modifies” applies only to the RP address, since the table is indexed from group address and mask parameters).

- `show ip pim anycast-rp`  
  Displays the anycast RP table, which includes the anycast RP address, the RP address, if its the local router, and the current status of the anycast RP configuration

**MIB Objects**

- `pimAnycastRPSetTable`
  - `pimAnycastRPSetAddressType`
  - `pimAnycastRPSetAddress`
  - `pimAnycastRPSetRouterAddress`
  - `pimAnycastRPSetRowStatus`
**ip pim candidate-rp**

Configures the local router as the Candidate-Rendezvous Point (C-RP) for a specified IP multicast group(s).

```
ip pim candidate-rp rp_address group-address/prefix_length [no] bidir [priority priority] [interval seconds]
```

```
o ip pim candidate-rp rp_address group-address/prefix_length
```

**Syntax Definitions**

- `rp_address` Specifies a 32-bit address that will be advertised as a Candidate-RP.
- `group_address` Specifies a 32-bit group address for which the local router will advertise itself as a Candidate-RP.
- `/prefix_length` Specifies the prefix length of the multicast group.
- `bidir` Creates a C-RP entry for use in the Bidirectional PIM (BIDIR-PIM) mode.
- `priority` Specifies the priority value of the Candidate-RP. Values may range from 0 to 192. The lower the value, the higher the priority.
- `seconds` Specifies the interval at which the C-RP advertisements are sent to the bootstrap router, in seconds. Values may range from 1 to 300.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>[no] bidir</td>
<td>no bidir</td>
</tr>
<tr>
<td>priority</td>
<td>192</td>
</tr>
<tr>
<td>seconds</td>
<td>60</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove the association of the device as a C-RP for a particular multicast group.
- The specified `rp_address` must belong to a PIM enabled interface.
Only one RP address is supported per switch. If multiple C-RP entries are defined, they must specify the same rp-address.

If the bidir parameter option is not specified with this command, the C-RP entry is created for use in the ASM mode.

The priority and the interval values are used by the switch. If they are modified for one entry, the switch will modify these for all the C-RP entries.

This command is supported only in the sparse mode.

**Examples**

```
-> ip pim candidate-rp 50.1.1.1 225.0.0.0/24 priority 100 interval 100
-> ip pim candidate-rp 50.1.1.1 225.0.0.0/24 bidir priority 100 interval 100
-> no ip pim candidate-rp 50.1.1.1 225.0.0.0/24
```

**Release History**

Release 7.1.1; command was introduced.
Release 7.3.4; bidir parameter added.

**Related Commands**

- `show ip pim candidate-rp`: Displays the IP multicast groups for which the local router will advertise itself as a Candidate-RP.

**MIB Objects**

<table>
<thead>
<tr>
<th>MIB Object</th>
</tr>
</thead>
<tbody>
<tr>
<td>pimBsrCandidateRPTable</td>
</tr>
<tr>
<td>pimBsrCandidateRPAddress</td>
</tr>
<tr>
<td>pimBsrCandidateRPGroupAddress</td>
</tr>
<tr>
<td>pimBsrCandidateRPGroupPrefixLength</td>
</tr>
<tr>
<td>pimBsrCandidateRPBidir</td>
</tr>
<tr>
<td>pimBsrCandidateRPPriority</td>
</tr>
<tr>
<td>pimBsrCandidateRPAAdvInterval</td>
</tr>
<tr>
<td>pimBsrCandidateRPRowStatus</td>
</tr>
</tbody>
</table>
**ip pim rp-threshold**

Specifies the data rate, in bits per second (bps), at which the Rendezvous Point (RP) will attempt to switch to native forwarding by issuing a source-specific (S, G) Join message toward the source.

**ip pim rp-threshold** *bps*

---

**Syntax Definitions**

*bps* The data rate value, in bits per second, at which the RP will attempt to switch to native forwarding (0–2147483647).

---

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td><em>bps</em></td>
<td>1</td>
</tr>
</tbody>
</table>

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- This command is supported only in the sparse mode.
- To disable the RP threshold feature, specify a bits per second value of 0. When the RP threshold is disabled, the RP will never initiate an (S, G) Join message toward the source; the packets will be register-encapsulated to the RP. It will issue a (S, G) Join message upon receiving the first data packet, if its bits per second value is 1.
- To view the current RP threshold, use the `show ip pim sparse` command.

---

**Examples**

```
-> ip pim rp-threshold 131072
```

---

**Release History**

Release 7.1.1; command was introduced.
Related Commands

show ip pim sparse

Displays the global parameters for PIM sparse mode.

MIB Objects

alaPimsmGlobalConfig

alaPimsmRPThreshold
ip pim keepalive-period

Configures the period during which the (S,G) Join state will be maintained in the absence of (S,G) Join messages or explicit (S,G) local membership.

```
ip pim keepalive-period seconds
```

**Syntax Definitions**

seconds Specifies the timeout value, in seconds (0-65535).

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>210</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- This timer is called the Keepalive Period in the PIM-SM specification and the Source Lifetime in the PIM-DM specification.

- This command includes support for both IPv4 PIM and IPv6 PIM.

**Examples**

```
-> ip pim keepalive-period 500
```

**Release History**

Release 7.1.1; command was introduced.
## Related Commands

- **show ip pim sparse**
  Displays the status of the various global parameters for the PIM sparse mode.

- **show ip pim dense**
  Displays the status of the various global parameters for the PIM dense mode.

- **show ipv6 pim sparse**
  Displays the status of the various global parameters for the IPv6 PIM sparse mode.

- **show ipv6 pim dense**
  Displays the status of the various global parameters for the IPv6 PIM dense mode.

## MIB Objects

- **pim**
  - **pimKeepalivePeriod**
**ip pim max-rps**

Configures the maximum number of C-RP routers allowed in the PIM-SM domain.

**ip pim max-rps number**

---

**Syntax Definitions**

`number` The maximum number of C-RP routers allowed in the PIM-SM domain (1–100).

---

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>number</td>
<td>32</td>
</tr>
</tbody>
</table>

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

---

**Usage Guidelines**

- This command is supported only in the sparse mode.
- This command is used with both IPv4 and IPv6 PIM-SM. The PIM-SM must be disabled before changing `max-rps` value.
- PIM-SM must be globally disabled before changing the maximum number of C-RP routers. To globally disable PIM-SM, refer to the `ip pim sparse admin-state` command on page 34-5.

---

**Examples**

```bash
-> ip pim max-rps 32
```

---

**Release History**

Release 7.1.1; command was introduced.
**Related Commands**

- **ip pim sparse admin-state**
  Globally enables or disables the PIM-SM protocol on the switch.

- **ipv6 pim sparse admin-state**
  Enables or disables the IPv6 PIM-SM (sparse mode) globally for IPv6.

- **show ip pim sparse**
  Displays the status of the various global parameters for the PIM sparse mode.

- **show ipv6 pim sparse**
  Displays the status of the various global parameters for the IPv6 PIM sparse mode.

**MIB Objects**

- **alaPimsmGlobalConfig**
- **alaPimsmMaxRPs**
**ip pim probe-time**

Configures the amount of time before the Register Suppression timer expires, at which point the Designated Router (DR) sends a Null Register message to the Rendezvous Point (RP). This allows the RP to refresh the Register-Stop. If the Register Suppression timer expires, the DR will resume encapsulating packets from the source to the RP.

**ip pim probe-time seconds**

---

### Syntax Definitions

seconds | The probe time, in seconds (1–300).

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>5</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

ip pim register checksum

Configures the application of the checksum function on sent and received register messages in the domain.

```
ip pim register checksum {header | full}
```

**Syntax Definitions**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>header</td>
<td>header</td>
</tr>
<tr>
<td>full</td>
<td></td>
</tr>
</tbody>
</table>

**Defaults**

- header: Specifies that the checksum for registers is done only on the PIM header.
- full: Specifies that the checksum is done over the entire PIM register message.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>

</table>

**Usage Guidelines**

- The `full` option may be required for compatibility with older implementations of PIM-SM v2.
- This parameter setting must be consistent across the PIM domain.
- This command is supported only in the sparse mode.

**Examples**

```
-> ip pim register checksum header
-> ip pim register checksum full
```

**Release History**

Release 7.1.1; command was introduced.
Related Commands

**show ip pim sparse**
Displays the status of the various global parameters for the PIM sparse mode.

MIB Objects

- `alaPimsmGlobalConfig`
- `alaPimsmOlRegisterMessageSupport`
**ip pim register-packing**

Enables or disables the PIM Register Message Packing.

`ip pim register-packing {enable | disable | force-enable}`

**Syntax Definitions**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>Enables the PIM register packing.</td>
</tr>
<tr>
<td>disable</td>
<td>Disables the PIM register packing.</td>
</tr>
<tr>
<td>force-enable</td>
<td>Force enables the PIM register packing</td>
</tr>
</tbody>
</table>

**Defaults**

By default, PIM register packing is disabled.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900V72/C32</th>
<th>6900X48C6/T48C6</th>
<th>6900X48C4E/V48C8/C32E/T24C2</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>Support</td>

<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- When using this command with Anycast-RP, PIM register packing should be enabled only if it is supported by all PIM anycast RP members in the RP set for the RP address.

- It is recommended to use the configuration value of "force-enable' on all the routers in the domain, when register message packing is desired and Anycast-RP is used.

- When the value “force-enable” is used, the null registers will automatically be packed without waiting for acknowledgment from an RP on whether or not the packing of register messages is supported.

- This command is supported only in the sparse mode.

**Examples**

- `-> ip pim register-packing enable`
- `-> ip pim register-packing force-enable`
- `-> ip pim register-packing disable`

**Release History**

Release 8.7R2; command was introduced.
**Related Commands**

- **show ip pim sparse**
  Displays the status of the various global parameters for the PIM sparse mode.

- **ip pim register-mtu**
  Configures the maximum size of messages used for PIM packet register messages.

- **ip pim register-delay**
  Configures the Triggered Register Delay interval in milliseconds.

**MIB Objects**

- `alaPimsmGlobalConfig`
- `alaPimsmRegisterMsgPackingStatus`
**ip pim register-mtu**

Configures the maximum size of messages used for PIM packed register messages.

```
ip pim register-mtu num
```

**Syntax Definitions**

`num` Specify the maximum MTU size of the PIM packed register messages in bytes.

**Defaults**

By default, the value is 1500.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Before using this command, enable or force-enable PIM register packing by using the `ip pim register-packing` command.
- Use this command to configure the maximum MTU size of packed PIM register messages sent out.
- If the MTU size of the packet is larger than the interface that is used to send the packed messages, those packets may be dropped.
- It is not recommended to configure to a large value unless it is known that all the RP routers in the domain can support the MTU size in order to avoid any fragmentation and reassembly of the packets.
- This command is supported only in the sparse mode.

**Examples**

```
-> ip pim register-mtu 1000
```

**Release History**

Release 8.7R2; command was introduced.
Related Commands

show ip pim sparse
Displays the status of the various global parameters for the PIM sparse mode.

ip pim register-packing
Enables or disables the PIM Register Message Packing.

ip pim register-delay
Configures the Triggered Register Delay interval in milliseconds.

MIB Objects

alaPimsmGlobalConfig
alaPimsmPackedRegisterMsgMtu
**ip pim register-delay**

Configures the Triggered Register Delay interval in milliseconds.

`ip pim register-delay num`

---

**Syntax Definitions**

`num` Specify the Triggered Register Delay interval in milliseconds.

---

**Defaults**

By default, the value is “0”.

---

---

**Usage Guidelines**

- Before using this command, enable or force-enable PIM register packing by using the `ip pim register-packing` command.

- Use this command to configure the Triggered Register Delay interval in milliseconds and to control the packing of initial bursts of triggered Null Register messages.

- This command is supported only in the sparse mode.

---

**Examples**

`-> ip pim register-delay 100`

---

**Release History**

Release 8.7R2; command was introduced.
**Related Commands**

- **show ip pim sparse**
  Displays the status of the various global parameters for the PIM sparse mode.

- **ip pim register-packing**
  Enables or disables the PIM Register Message Packing.

- **ip pim register-mtu**
  Configures the maximum size of messages used for PIM packed register messages.

**MIB Objects**

- alaPimsmGlobalConfig
- alaPimsmPackedRegisterMsgDelay
**ip pim register-suppress-timeout**

Specifies the period during which a Designated Router (DR) stops sending Register-encapsulated packets to the Rendezvous Point (RP) after receiving a Register-Stop message.

**ip pim register-suppress-timeout seconds**

---

**Syntax Definitions**

*seconds*  
The timeout value, in seconds (0–65535).

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>60</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- This command is supported in both IPv4 and IPv6 PIM.
- This command is supported only in the sparse mode.

**Examples**

```
-> ip pim register-suppress-timeout 10
```

**Release History**

Release 7.1.1; command was introduced.
Related Commands

show ip pim sparse  Displays the status of the various global parameters for the PIM sparse mode.
show ipv6 pim sparse  Displays the status of the various global parameters for the IPv6 PIM sparse mode.

MIB Objects

pim
  pimRegisterSuppressionTime
**ip pim register-rate-limit**

Configures the maximum number of PIM Register Packets that the Designated Router (DR) will send per second for each (S,G) entry.

```
ip pim register-rate-limit pps
```

---

**Syntax Definitions**

`pps`  
The per (S,G) register rate limit in packets per second (0–65535).

---

**Defaults**

By default, the register rate limit is set to zero (no rate-limiting is applied to outgoing PIM Register messages).

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6/X48C4E/</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- Setting the register rate limit to zero (the default) disables register rate limiting.
- Rate limiting is applied on a per (S,G) flow basis.
- This command is supported in both IPv4 and IPv6 PIM.
- This command is supported only in the sparse mode.

---

**Examples**

```
-> ip pim register-rate-limit 100
-> ip pim register-rate-limit 0
```

---

**Release History**

Release 8.4.1.R02; command was introduced.
**Related Commands**

- **show ip pim sparse**
  Displays the status of the various global parameters for the PIM sparse mode.

- **show ipv6 pim sparse**
  Displays the status of the various global parameters for the IPv6 PIM sparse mode.

**MIB Objects**

- `alaPimsmGlobalConfigTable`
- `alaPimsmRegisterRateLimit`
**ip pim spt admin-state**

Enables or disables last hop Designated Router (DR) switching to the Shortest Path Tree (SPT). If enabled, last hop DR switching to the SPT begins once the first data packet is received.

```
ip pim spt admin-state {enable | disable}
```

**Syntax Definitions**

- **enable**
  Enables last hop DR switching to the SPT.

- **disable**
  Disables last hop DR switching to the SPT.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- This command is supported only in the sparse mode.

- As mentioned above, if SPT status is enabled, last hop DR switching to the SPT begins once the first data packet is received.

- To view whether SPT status is currently enabled (default) or disabled, use the `show ip pim sparse` command.

**Examples**

- `-> ip pim spt admin-state enable`
- `-> ip pim spt admin-state disable`

**Release History**

Release 7.1.1; command was introduced.
**Related Commands**

- **show ip pim sparse** Displays the status of the various global parameters for the PIM sparse mode.

**MIB Objects**

- `alaPimsmGlobalConfig`
- `alaPimsmAdminSPTConfig`
**ip pim state-refresh-interval**

Sets the interval between successive State Refresh messages originated by a router.

**ip pim state-refresh-interval seconds**

---

**Syntax Definitions**

`seconds` The interval between successive State Refresh messages, in seconds. Values may range from 0 to 65535.

---

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>60</td>
</tr>
</tbody>
</table>

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- This command is supported only in the dense mode.
- This value is used with both IPv4 PIM-DM and IPv6 PIM-DM.

---

**Examples**

```plaintext
-> ip pim state-refresh-interval 80
```

---

**Release History**

Release 7.1.1; command was introduced.
**Related Commands**

- `ip pim interface` Enables or disables the PIM protocol on a specific interface.
- `ipv6 pim interface` Enables IPv6 PIM and configures the statistics.
- `show ip pim dense` Displays the status of the various global parameters for the PIM dense mode.
- `show ipv6 pim dense` Displays the status of the various global parameters for the IPv6 PIM dense mode.

**MIB Objects**

- `pim`
  - `pimRefreshInterval`
ip pim state-refresh-limit

Sets the limit at which a router will not forward successive State Refresh messages if they are received at less than the interval.

ip pim state-refresh-limit ticks

Syntax Definitions

ticks The limit at which the received State Refresh messages will not be forwarded, if the messages are received at less than the interval. Values may range from 0 to 65535.

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>ticks</td>
<td>0</td>
</tr>
</tbody>
</table>

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>

</tbody>
</table>

Usage Guidelines

- This command is supported only in the dense mode.
- This value is used with both IPv4 and IPv6 PIM-DM.

Examples

-> ip pim state-refresh-ttl 122

Release History

Release 7.1.1; command was introduced.
**Related Commands**

- **ip pim interface**
  Enables or disables the PIM protocol on a specific interface.

- **ipv6 pim interface**
  Enables IPv6 PIM and configures the statistics.

- **show ip pim dense**
  Displays the status of the various global parameters for the PIM dense mode.

- **show ipv6 pim dense**
  Displays the status of the various global parameters for the IPv6 PIM dense mode.

**MIB Objects**

- **alaPimdmGlobalConfig**
  
  - **alaPimdmStateRefreshTimeToLive**
**ip pim interface**

Enables PIM and configures PIM-related statistics such as hello-interval, triggered-hello, hello-holdtime, joinprune, prune-delay, override-interval, dr-priority, stub interface, prune limit interval, and graft retry interval on the interface.

```
ip pim interface if_name
  [hello-interval seconds]
  [triggered-hello seconds]
  [joinprune-interval seconds]
  [hello-holdtime seconds]
  [joinprune-holdtime seconds]
  [prune-delay milliseconds]
  [override-interval milliseconds]
  [dr-priority priority]
  [prune-limit-interval seconds]
  [graft-retry-interval seconds]
  [df-election-robustness messages]
  [[no] stub]
  [joinprune-mtu bytes]
  [joinprune-delay milliseconds]

no ip pim interface if_name
```

**Syntax Definitions**

- `if_name`  
The interface name on which PIM is being enabled or disabled.

- `hello-interval seconds`  
The frequency at which PIM Hello messages are transmitted on a specified interface, in seconds. Values range from 0 to 18000.

- `triggered-hello seconds`  
Specifies the maximum time, in seconds, before a triggered PIM Hello message is sent on this interface. Values range from 0 to 60.

- `joinprune-interval seconds`  
The frequency at which periodic Join/Prune messages are sent on this interface, in seconds. Values range from 0 to 18000.

- `hello-holdtime seconds`  
Specifies the value set in the Holdtime field of PIM Hello messages sent on this interface, in seconds. Values range from 0 to 65535.

- `joinprune-holdtime seconds`  
The value inserted into the Holdtime field of the Join/Prune messages sent on this interface, in seconds. Values range from 0 to 65535.

- `prune-delay milliseconds`  
The value of the expected propagation delay between PIM routers on this network, inserted into the LAN prune-delay option of the Hello messages sent on this interface, in milliseconds. Values range from 0 to 32767.

- `override-interval milliseconds`  
The value inserted into the Override Interval field of the LAN prune-delay option of the Hello messages sent on this interface, in milliseconds. Values range from 0 to 65535.
**dr-priority** *priority*  
Specifies the Designated Router priority inserted into the DR priority option on a specified interface. The DR priority option value can range between 1 to 192. A higher numeric value denotes a higher priority.

**prune-limit-interval** *seconds*  
Specifies the minimum interval that must elapse between two successive prune messages sent on this interface, in seconds. Values range from 0 to 65535.

**graft-retry-interval** *seconds*  
Specifies the minimum interval that must elapse between two successive graft messages sent on this interface, in seconds. Values range from 0 to 65535.

**df-election-robustness** *messages*  
The minimum number of DF-Election messages that must be lost in order for the DF Election to fail on the specified interface. Values range from 1–65535. This value is used only by BIDIR-PIM.

**stub**  
Specifies the interface not to send any PIM packets through this interface, and to ignore received PIM packets.

**joinprune-mtu** *bytes*  
Specifies the maximum size used for PIM Join/Prune packets sent out of the interface. Values range from 0 to 9198. *Supported only on the OmniSwitch 6860 and OmniSwitch 6900.*

**joinprune-delay** *milliseconds*  
Specifies the Join/Prune delay interval in milliseconds. Values range from 0 to 32767. *Supported only on the OmniSwitch 6860 and OmniSwitch 6900.*

<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the **no** form of this command to delete a PIM interface.

- PIM must be enabled globally on the switch before it runs on the interface. To globally enable or disable PIM-SM on the switch, refer to the **ip pim sparse admin-state** command on page 34-5. To enable or disable PIM-DM on the switch, refer to the **ip pim dense admin-state** command on page 34-9.

- Specifying zero for the hello-interval represents an infinite time, in which case periodic PIM Hello messages are not sent.

- Specifying zero for the joinprune-interval represents an infinite time, in which case periodic PIM Join/Prune messages are not sent.

- Specifying the value of 65535 for hello-holdtime represents an infinite time. If a PIM router gets Hello packet from a neighbor with its hello-holdtime value as infinite time, then the PIM router will not time out the sender(neighbor). It is recommended that you should use a hello-holdtime interval that is 3.5 times the value of the hello-interval, or 65535 seconds if the hello-interval is set to zero.

- Specifying the value of 65535 for joinprune-holdtime represents an infinite time. The receipt of Join/Prune messages with its joinprune-holdtime value as infinite time, then this specifies an infinite holdtime for the particular join/prune message. It is recommended that you use a joinprune-holdtime interval that is 3.5 times the value of the Join/Prune interval defined for the interface, or 65535 seconds if the joinprune-interval is set to zero.

- The interface configured as a **stub** will not send any PIM packets through that interface, and any received PIM packets are also ignored. By default, a PIM interface is not set to be a stub one.

- The **graft-retry-interval** and **prune-limit-interval** options can be used only with the PIM-DM mode.

- If the IP interface on which PIM is enabled is bound to an SPB service, then PIM can operate over an SPB L3 VPN in-line routing configuration (supported only on the OmniSwitch 9900).

- By default, **joinprune-mtu** value is ‘0’ and the configured interface MTU value will be used in determining the maximum packet size that can be used in sending the packed messages. However, if the Join/Prune MTU configuration is specified, the actual maximum size used for PIM Join/Prune messages will be the smaller of the IP MTU value of the interface and the configured interface Join/Prune MTU value.

- The **joinprune-delay** interval is used to delay the sending of triggered Join/Prune messages and may be desirable to allow the packing of triggered Join/Prune messages due to bursts of protocol messages, which may result in subsequent bursts of triggered Join/Prune packets. The default value of ‘0’ implies no deferred processing and will result in no packing of triggered Join/Prune packets.
Examples

-> ip pim interface vlan-2 hello-interval 100 triggered-hello 10 joinprune-interval 100 hello-holdtime 350 joinprune-holdtime 400
-> no ip pim interface vlan-2

Release History

Release 7.1.1; command was introduced.
Release 7.3.4; **df-election-robustness** parameter added.
Release 8.6R1; **joinprune-mtu, joinprune-delay** parameters added.

**ip pim neighbor-loss-notification-period**

Specifies the minimum time that must elapse between PIM neighbor loss notifications originated by the router.

```
ip pim neighbor-loss-notification-period seconds
```

### Syntax Definitions

- `seconds`: Specifies the time value that must elapse between neighbor loss notifications, in seconds (0–65535).

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>0</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- The default value of 65535 represents an infinite time. The PIM invalid register notifications are never sent in case of infinite time.
- The non-zero minimum allowed value provides resilience against the propagation of denial-of-service attacks from the data and control planes to the network management plane.
- This value is used with both IPv4 and IPv6 PIM.
- This command is supported only in the sparse mode.

**Examples**

-> ip pim invalid-register-notification-period 100

**Release History**

Release 7.1.1; command was introduced.
**Related Commands**

*show ip pim notifications*  
Displays the configuration of the configured notification periods as well as information on the events triggering the notifications.

**MIB Objects**

`pim`  
`pimInvalidRegisterNotificationPeriod`
ip pim invalid-joinprune-notification-period

Specifies the minimum time that must elapse between the PIM invalid joinprune notifications originated by the router.

`ip pim invalid-joinprune-notification-period seconds`

### Syntax Definitions

| seconds | Specifies the minimum time value that must elapse between invalid joinprune notifications, in seconds (10–65535). |

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>65535</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- The default value of 65535 represents an infinite time. This type of notification is never sent when this value is set to infinite time.
- The default minimum time is set to a non-zero value to provide resilience against the propagation of denial-of-service (DoS) attacks from the control plane to the network management plane.
- The Bidirectional Capable option indicates that a router is capable of participating as a BIDIR-PIM neighbor.
- This value is used with both IPv4 and IPv6 PIM.
- This command is only applicable if BIDIR-PIM is globally enabled for the switch.

---

**Examples**

-> ip pim nonbidir-hello-notification-period 1000
-> ip pim nonbidir-hello-notification-period 65535

---

**Release History**

Release 7.3.4; command was introduced.
Related Commands

**ip pim df-abort**  
Configures whether or not the Designated Forwarder (DF) election process is aborted when a PIM Hello message received from a PIM neighbor does not contain the Bidirectional Capable option.

**show ip pim notifications**  
Displays the configuration of the configured notification periods as well as information on the events triggering the notifications.

MIB Objects

alaPimsmGlobalConfig  
alaPimsmNonBidirHelloPeriod
ip pim df-abort

Configures whether or not the Designated Forwarder (DF) election process is stopped when a PIM Hello message received from a PIM neighbor does not contain the Bidirectional Capable option.

```
ip pim df-abort {enable | disable}
```

---

**Syntax Definitions**

| enable     | Administratively enables the DF abort operation (DF election is stopped). |
| disable    | Administratively disables the DF abort operation (DF election is not stopped). |

---

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6/C32</th>
<th>9900</th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- The DF election process occurs between PIM routers that support BIDIR-PIM. When the DF abort option is disabled, this election process continues between the BIDIR-PIM routers.
- This command is only applicable if BIDIR-PIM is globally enabled for the switch.

---

**Examples**

```
-> ip pim df-abort enable
-> ip pim df-abort disable
```

---

**Release History**

Release 7.3.4; command was introduced.
**Related Commands**

- **ip pim nonbidir-hello-notification-period**
  Specifies the minimum time between notifications that a BIDIR-PIM router transmits when the router receives a Hello message from a neighbor that does not contain the Bidirectional Capable option.

- **show ip pim sparse**
  Displays the status of the various global parameters for the PIM sparse mode.

**MIB Objects**

alaPimsmGlobalConfig
  - alaPimsmBidirDFAbort
**ip pim mbr all-sources**

Configures whether or not PIM notifies DVMRP about the routes to all multicast sources learned. This command applies only when the local switch is operating as a Multicast Border Router (MBR).

`ip pim mbr all-sources`

`no ip pim mbr all-sources`

---

**Syntax Definitions**

N/A

**Defaults**

By default, PIM only notifies DVMRP about the routes for subnets directly connected to PIM interfaces.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to disable notification of all route sources learned.
- This command applies to both PIM-SM and PIM-DM. Note that PIM-SSM does not support MBR functionality.
- DVMRP advertises the routes received from PIM within the DVMRP domain using standard DVMRP mechanisms.

**Examples**

`-> ip pim mbr all-sources`

`-> no ip pim mbr all-sources`

**Release History**

Release 7.3.2; command was introduced.
Related Commands

- `show ip pim sparse`: Displays the status of the various global parameters for the PIM sparse mode.
- `show ip pim dense`: Displays the status of the various global parameters for the PIM dense mode.
- `ip mroute mbr`: Configures the switch to operate as a Multicast Border Router to provide interoperability between PIM and DVMRP.
- `ip dvmrp interface mbr-default-information`: Configures whether or not the DVMRP interface on a Multicast Border Router advertises a default route.

MIB Objects

- `alaPimGlobalConfig`
- `alaPimMbrAllSourcesStatus`
ip pim df-periodic-interval

Sets the interval at which the Designated Forwarder (DF) for each Rendezvous Point Address (RPA) periodically announces its status in a Winner message.

`ip pim df-periodic-interval seconds`

**Syntax Definitions**

`seconds`  
The time interval between successive Winner messages, in seconds. The valid range is 0–2000.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>60</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6/</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- When the value for this interval is set to zero, no messages are sent.
- This value is used with both IPv4 BIRDIR-PIM and IPv6 BIRDIR-PIM.
- Setting this interval value provides an additional degree of safety to ensure that two routers do not both consider themselves to be the DF for the same link.
- The periodic Winner messages will only occur for RPAs that have active groups, thus avoiding the periodic control traffic in areas of the network without senders or receivers for a particular RPA.

**Examples**

- `-> ip pim df-periodic-interval 80`
- `-> ip pin df-periodic-interval 0`

**Release History**

Release 7.3.4; command was introduced.
**Related Commands**

- `show ip pim sparse` Displays the status of the various global parameters for the PIM sparse mode.
- `show ipv6 pim sparse` Displays the status of the various global parameters for the IPv6 PIM sparse mode.

**MIB Objects**

alaPimsmGlobalConfig
  - alaPimsmBidirPeriodicInterval
**ip pim bfd-state**

Enables or disables the registration of PIM with the BFD protocol.

```
ip pim bfd-state {enable | disable}
```

---

**Syntax Definitions**

- **enable**: Enables BFD for PIM.
- **disable**: Disables BFD for PIM.

---

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- BFD must be globally enabled for the switch and PIM must be registered with BFD at the protocol level before PIM can interact with BFD.
- All the status changes on the neighbors are received from the BFD level and PIM acts based upon the BFD message.
- Whenever a neighbor goes down, PIM will inform BFD to remove that neighbor from the BFD active list.

---

**Examples**

Globally enables the BFD protocol for the switch:

```
-> ip bfd admin-state enable
```

Enables and disables the registration of PIM with the BFD protocol:

```
-> ip pim bfd-state enable
-> ip pim bfd-state disable
```

---

**Release History**

Release 7.1.1; command was introduced.
Related Commands

- **ip bfd admin-state**
  Enables or disables the global BFD protocol status for the switch.

- **ip pim bfd-state all-interfaces**
  Enables or disables BFD monitoring for all PIM interfaces in the switch configuration.

- **ip pim interface bfd-state**
  Enables or disables BFD monitoring on a specific PIM interface.

- **show ip pim sparse**
  Displays the status of the various global parameters for the PIM sparse mode.

- **show ip pim dense**
  Displays the status of the various global parameters for the PIM dense mode.

MIB Objects

- **alaPimGlobal**
- **alaPimBfdStatus**
**ip pim bfd-state all-interfaces**

Enables or disables BFD monitoring for all PIM interfaces in the switch configuration.

```
ip pim bfd-state all-interfaces {enable | disable}
```

**Syntax Definitions**

- **enable**
  - Enables BFD for all the PIM interfaces.
- **disable**
  - Disables BFD for all the PIM interfaces.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

The BFD status for PIM must be enabled before PIM can interact with BFD.

**Examples**

```
-> ip pim bfd-state all-interfaces enable
-> ip pim bfd-state all-interfaces disable
```

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- **ip pim bfd-state**
  - Enables or disables the registration of PIM with the BFD protocol.
- **ip pim interface bfd-state**
  - Enables or disables BFD monitoring on a specific PIM interface.
- **show ip pim interface**
  - Displays detailed PIM settings for a specific interface.

**MIB Objects**

- **alaPimGlobalConfig**
- **alaPimBfdAllInterfaceStatus**
ip pim interface bfd-state

Enables or disables BFD monitoring for a specific PIM interface.

    ip pim interface if_name bfd-state {enable | disable}

**Syntax Definitions**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>Enables BFD for the specified PIM interface.</td>
</tr>
<tr>
<td>disable</td>
<td>Disables BFD for the specified PIM interface.</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Registering PIM with BFD is required at the protocol level before PIM can interact with BFD.
- When BFD is enabled on the specified PIM interface, BFD monitors the connectivity to all neighbors known through the specified interface.

**Examples**

- `-> ip pim interface pimInt1 bfd-state enable`
- `-> ip pim interface pimInt1 bfd-state disable`

**Release History**

Release 7.1.1; command was introduced.
Related Commands

**ip pim bfd-state**
Enables or disables the registration of PIM with the BFD protocol.

**ip pim bfd-state all-interfaces**
Enables or disables BFD monitoring for all PIM interfaces in the switch configuration.

**show ip pim interface**
Displays detailed PIM settings for a specific interface.

MIB Objects

alaPimInterfaceAugTable

alaPimBfdStatus
ip pim bidir ssm-compat

Configures the status of the Source-specific Multicast (SSM) compatibility mode. When enabled, a BIDIR-PIM router will support receiving IGMPv3 SSM joins and process them as a (*,G) join.

```
ip pim bidir ssm-compat {enable | disable}
```

**Syntax Definitions**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>Administratively enables BIDIR/SSM compatibility mode.</td>
</tr>
<tr>
<td>disable</td>
<td>Administratively disables BIDIR/SSM compatibility mode.</td>
</tr>
</tbody>
</table>

**Defaults**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- When the SSM compatibility mode is disabled, SSM joins are ignored by the BIDIR-PIM router.
- This command is only applicable if BIDIR-PIM is globally enabled for the switch.

**Examples**

- `-> ip pim bidir ssm-compat enable`
- `-> ip pim bidir ssm-compat disable`

**Release History**

Release 8.3.1.R02; command was introduced.
**Related Commands**

*show ip pim sparse*  
Displays the status of the various global parameters for the PIM sparse mode.

**MIB Objects**

alaPimsmGlobalConfig  
alaPimsmBidirSsmCompat
ip pim bidir fast-join

Configures whether or not a BIDIR-PIM router will automatically create (*,G) routes in the hardware as soon as BIDIR (*,G) routes are learned.

`ip pim bidir fast-join {enable | disable}`

**Syntax Definitions**

<table>
<thead>
<tr>
<th>enable</th>
<th>Administratively enables the BIDIR-PIM fast join functionality.</th>
</tr>
</thead>
<tbody>
<tr>
<td>disable</td>
<td>Administratively disables the BIDIR-PIM fast join functionality.</td>
</tr>
</tbody>
</table>

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

Not supported in this release.

**Usage Guidelines**

- This command is only applicable if BIDIR-PIM is globally enabled for the switch.
- When the BIDIR fast join functionality is enabled, convergence of multicast traffic may occur faster because the (*,G) routes are already created before the actual multicast traffic is received.
- When the BIDIR fast join functionality is disabled (the default), routes are not created in the hardware until the multicast traffic reaches the switch.

**Examples**

- `-> ip pim bidir fast-join enable`
- `-> ip pim bidir fast-join disable`

**Release History**

Release 8.3.1.R02; command was introduced.

**Related Commands**

- `show ip pim sparse` Displays the status of the various global parameters for the PIM sparse mode.

**MIB Objects**

- `alaPimsmGlobalConfig`
- `alaPimsmBidirFastJoin`
**ip pim sparse asm-fast-join**

Configures whether or not a PIM Sparse router will automatically create (*,G) routes in the hardware as soon as the (*,G) routes are learned.

```
ip pim sparse asm-fast-join {enable | disable}
```

**Syntax Definitions**

<table>
<thead>
<tr>
<th>parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>Administratively enables the PIM Sparse ASM fast join functionality.</td>
</tr>
<tr>
<td>disable</td>
<td>Administratively disables the PIM Sparse ASM fast join functionality.</td>
</tr>
</tbody>
</table>

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

Not supported in this release.

**Usage Guidelines**

- This command is only supported in the PIM Sparse mode.
- When the PIM Sparse fast join functionality is enabled, convergence of multicast traffic may occur faster because the (*,G) routes are already created before the actual multicast traffic is received.
- When the PIM Sparse fast join functionality is disabled (the default), routes are not created in the hardware until the multicast traffic reaches the switch.
- This option should be used with caution due to the complicated nature of PIM ASM, which involves forwarding on the shared tree, the sending and receiving of PIM register packets, and switching to the SPT. As a result, only enable the ASM fast join function when there are no other locally attached sources, the router is not the RP, and the SPT is disabled.

**Examples**

```
-> ip pim sparse asm-fast-join enable
-> ip pim sparse asm-fast-join disable
```

**Release History**

Release 8.3.1.R02; command was introduced.
**Related Commands**

`show ip pim sparse` Displays the status of the various global parameters for the PIM sparse mode.

**MIB Objects**

alaPimsmGlobalConfig
alaPimsmAsmFastJoin
ip pim sparse ssm-fast-join

Configures whether or not a PIM Sparse router will automatically create both PIM Sparse and SSM (S,G) routes in the hardware as soon as the (S,G) routes are learned.

ip pim sparse ssm-fast-join {enable | disable}

Syntax Definitions

<table>
<thead>
<tr>
<th>enable</th>
<th>Administratively enables the PIM Sparse SSM fast join functionality.</th>
</tr>
</thead>
<tbody>
<tr>
<td>disable</td>
<td>Administratively disables the PIM Sparse SSM fast join functionality.</td>
</tr>
</tbody>
</table>

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

Platforms Supported

Not supported in this release.

Usage Guidelines

- This command is only supported in the PIM Sparse mode.
- When the PIM Sparse fast join functionality is enabled, convergence of multicast traffic may occur faster because the (S,G) routes are already created before the actual multicast traffic is received.
- When the PIM Sparse fast join functionality is disabled (the default), routes are not created in the hardware until the multicast traffic reaches the switch.

Examples

- ip pim sparse ssm-fast-join enable
- ip pim sparse ssm-fast-join disable

Release History

Release 8.3.1.R02; command was introduced.

Related Commands

show ip pim sparse Displays the status of the various global parameters for the PIM sparse mode.

**output definitions**

<table>
<thead>
<tr>
<th>Output</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Status</strong></td>
<td>The current global (i.e., switch-wide) status of PIM-SM. Options include <strong>enabled</strong> and <strong>disabled</strong>.</td>
</tr>
<tr>
<td><strong>Keepalive Period</strong></td>
<td>The duration of the Keepalive timer. The default value is 210.</td>
</tr>
<tr>
<td><strong>Max RPs</strong></td>
<td>The maximum number of Rendezvous Points (RPs) allowed in the PIM-SM domain (1–100). The default value is 32.</td>
</tr>
<tr>
<td><strong>Probe Time</strong></td>
<td>The amount of time before the Register Suppression timer expires, at which point the Designated Router (DR) sends a Null Register message to the Rendezvous Point (RP). This allows the RP to refresh the Register-Stop. If the Register Suppression timer expires, the DR will resume encapsulating packets from the source to the RP. Values may range from 1 to 300. The default value is 5.</td>
</tr>
<tr>
<td><strong>Register Checksum</strong></td>
<td>The current application of the checksum function on register messages in the domain. Options include <strong>header</strong> and <strong>full</strong>. The default setting is <strong>header</strong>.</td>
</tr>
<tr>
<td><strong>Register Suppress Timeout</strong></td>
<td>The amount of time, in seconds, the Designated Router (DR) will stop sending registers to the Rendezvous Point (RP) once a Register-Stop is received (1–300). The default value is 60.</td>
</tr>
<tr>
<td><strong>RP Threshold</strong></td>
<td>Displays the current RP data rate threshold. This value indicates the rate, in bits per second (bps), at which the Rendezvous Point (RP) will attempt to switch to native forwarding by issuing an (S, G) Join message toward the source. Values may range from 0 to 2147483647. The default value is 1. A value of 0 indicates that the feature is currently disabled.</td>
</tr>
<tr>
<td><strong>SPT Status</strong></td>
<td>The current status of last hop Designated Router (DR) switching to the Shortest Path Tree (SPT). Options include <strong>enabled</strong> (the default) and <strong>disabled</strong>.</td>
</tr>
<tr>
<td><strong>BIDIR Status</strong></td>
<td>The current global status of Bidirectional PIM (BIDIR-PIM) for the switch. Options include <strong>enabled</strong> and <strong>disabled</strong> (the default).</td>
</tr>
<tr>
<td><strong>BIDIR Periodic Interval</strong></td>
<td>The amount of time, in seconds, between Winner messages the Designated Forwarder (DF) sends out to announce its status. The valid range is 0–2000. The default is 60 seconds.</td>
</tr>
<tr>
<td><strong>BIDIR DF Abort Status</strong></td>
<td>Indicates whether or not the DF election process is stopped when a BIDIR-PIM router receives a Hello message that does not contain the Bidirectional Capable option. When <strong>enabled</strong> DF election is stopped; when <strong>disabled</strong> (the default) DF election continues.</td>
</tr>
<tr>
<td><strong>BFD Status</strong></td>
<td>Indicates whether the Bidirectional Forwarding Detection (BFD) protocol is <strong>enabled</strong> or <strong>disabled</strong> (the default) for the PIM router.</td>
</tr>
<tr>
<td><strong>MoFRR Status</strong></td>
<td>Not supported in the current release.</td>
</tr>
<tr>
<td><strong>MoFRR All Routes Status</strong></td>
<td>Not supported in the current release.</td>
</tr>
</tbody>
</table>

<tr>
<td>Register Trigger Delay</td>
<td>The Triggered Register Delay interval in milliseconds.</td>
</tr>
</tbody>
</table>

Release History

Release 7.1.1; command was introduced.
Release 7.3.2; **MBR All Sources Status** and **MBR Operational Status** fields added.
Release 7.3.4; BIDIR fields added, **RP Hash Algorithm** field added.
Release 8.4.1.R02; **Register Rate Limit** field added.
Release 8.6R1; **Join/Prune Message Packing** field added.
Release 8.7R2; **Register Message Packing**, **Register MTU**, **Register Trigger Delay** fields added.
### Related Commands

- **ip pim sparse admin-state**
  Globally enables or disables PIM-SM protocol on the switch.

- **ip pim interface**
  Enables or disables the PIM protocol on a specific interface.

- **ip pim keepalive-period**
  Configures the period during which the (S,G) Join state will be maintained in the absence of (S,G) Join messages or explicit (S,G) local membership.

- **ip pim max-rps**
  Configures the maximum number of C-RP routers allowed in the PIM-SM domain.

- **ip pim probe-time**
  Configures the amount of time before the Register Suppression timer expires, at which point the Designated Router (DR) sends a Null Register message to the Rendezvous Point (RP). This allows the RP to refresh the Register-Stop. If the Register Suppression timer expires, the DR will resume encapsulating packets from the source to the RP.

- **ip pim register checksum**
  Configures the application of the checksum function on sent and received register messages in the domain.

- **ip pim register-suppress-timeout**
  Specifies the period during which a Designated Router (DR) stops sending Register-encapsulated packets to the Rendezvous Point (RP) after receiving a Register-Stop message.

- **ip pim register-rate-limit**
  Specifies the maximum number of PIM Register Packets that the Designated Router (DR) will send per second for each (S,G) entry.

- **ip pim rp-threshold**
  Specifies the data rate, in bits per second (bps), at which the Rendezvous Point (RP) will attempt to switch to native forwarding by issuing a source-specific (S,G) Join message toward the source.

- **ip pim spt admin-state**
  Enables or disables last hop Designated Router (DR) switching to the Shortest Path Tree (SPT). If enabled, last hop DR switching to the SPT begins once the first data packet is received.

- **ip pim bidir admin-state**
  Globally enables or disables BIDIR-PIM protocol on the switch.

- **ip pim df-periodic-interval**
  Configures the time interval at which the DF for each RP address periodically announces its status in a Winner message.

- **ip pim df-abort**
  Configures whether or not the DF election process is stopped when a PIM Hello message received from a PIM neighbor does not contain the Bidirectional Capable option.

- **ip pim bfd-state**
  Enables or disables the registration of PIM with the BFD protocol.

- **ip pim mbr all-sources**
  Configures PIM to notify DVMRP of all learned routes to sources. This command only applies when the switch is operating in the Multicast Border Router mode.

- **ip pim rp-hash admin-state**
  Globally enables or disables the RP hashing algorithm version.

- **ip pim bidir ssm-compat**
  Configures the SSM compatibility mode for a BIDIR-PIM router.

- **ip pim joinprune-packing**
  Enable or disable PIM Join/Prune message packing.

- **ip pim register-packing**
  Enables or disables the PIM Register Message Packing.

- **ip pim register-mtu**
  Configures the maximum size of messages used for PIM packed register messages.

- **ip pim register-delay**
  Configures the Triggered Register Delay interval in milliseconds.

  - `alaPimdmDenseGroupGrpAddress`
  - `alaPimdmDenseGroupGrpPrefixLength`
  - `alaPimdmDenseGroupOverrideDynamic`
  - `alaPimdmDenseGroupPrecedence`
  - `alaPimdmDenseGroupRowStatus`
show ip pim neighbor

Displays a list of active PIM neighbors.

**show ip pim neighbor [ip_address]**

**Syntax Definitions**

*ip_address*  
The 32-bit IP address for the PIM neighbor.

**Defaults**

If a neighbor’s IP address is not specified, the entire PIM neighbor table is displayed.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

To view more detailed information about a particular neighbor, specify the neighbor's IP address in the command line. Additional information will be displayed, which includes LAN Prune Delay, Override Interval, TBit field, State Refresh capable, and Designated Router option status.

**Examples**

```
-> show ip pim neighbor
Neighbor Address    Interface Name    Uptime       Expires      DR Priority
-----------------+--------------------+-----------+-----------+-------------
212.61.20.250      vlan-2            01h:07m:07s 00h:01m:38s 100
212.61.60.200      vlan-6            01h:07m:07s 00h:01m:38s 100
214.28.4.254       vlan-26           01h:07m:07s 00h:01m:38s 100
```

If a specific neighbor IP address is specified in the command line, *detailed information for the corresponding neighbor only* displays:

```
-> show ip pim neighbor 212.61.30.7
Neighbor IP Address  = 212.61.30.7,
Interface Name       = vlan-30,
Uptime               = 00h:04m:14s,
Expires              = 00h:01m:31s,
Lan Prune Delay Present = true,
Propagation Delay    = 500,
Override Interval    = 2500,

**Examples**

-> show ip pim candidate-rp
RP Address  Group Address  Priority  Interval  Mode  Status
---------------------------------------------------------------
40.1.50.25  225.0.0.0/8  192       60       bidir enabled

**output definitions**

**RP Address**
A 32-bit IP address that is advertised as the Candidate-Rendezvous Point (RP).

**Group Address**
The 32-bit IP address for a multicast group, along with the mask length, shown in bits. The group IP address and mask are separated by a slash character (/). This is the group for which the local router advertises itself as a C-RP.

**Priority**
The C-RP router’s priority. The lower the value, the higher the priority.

**Interval**
The time interval at which the C-RP advertisements are sent to the BSR.
**output definitions**

<table>
<thead>
<tr>
<th>Mode</th>
<th>Whether or not the Group Address is for a PIM-SM group or a Bidirectional PIM (BIDIR-PIM) group.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Status</td>
<td>The current status of this entry. The status is shown as enabled only if the PIM-SM is globally enabled and the PIM interface is enabled.</td>
</tr>
</tbody>
</table>

**Release History**

Release 7.1.1; command was introduced.  
Release 7.3.4; **Mode** field added.

**Related Commands**

**ip pim candidate-rp**  
Configures the local router as the Candidate-Rendezvous Point (C-RP) for a specified IP multicast group(s).

show ip pim group-map

Displays the PIM group mapping table.

show ip pim group-map [bsr | static-rp | ssm | dense]

Syntax Definitions

N/A

Defaults

If the keywords bsr, static-rp, ssm, or dense are included in the command line, then only the entries that were created by the specified origin are displayed.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- If static RP configuration is being used, this information is obtained from those static RP addresses that are defined through the ip pim static-rp command. As long as the RP addresses defined in the static RP set are reachable, they will be added to the group mapping table.

- If the IP multicast groups are mapped to the mode SSM or DM, then the entries created by local SSM address range configuration using the ip pim ssm group command and local Dense Mode address range configuration using the ip pim dense group command are displayed.

- If the bootstrap mechanism is being used, this information is obtained from received Candidate-RP advertisements (when the local router is the BSR; when the local router is not the BSR, this information is obtained from received bootstrap messages).

Examples

```bash
-> show ip pim group-map
Origin    Group Address/Pref Length   RP Address    Mode  Precedence
---------+---------------------------+-------------+-----+-----------
BSR       225.0.0.0/24                172.21.63.11  asm   192
BSR       225.0.0.0/8                 40.1.50.25    bidir 192
Static RP 226.0.0.0/8                 10.11.203.8   bidir none
Static RP 232.0.0.0/8                               ssm

-> show ip pim group-map bsr
Origin    Group Address/Pref Length   RP Address    Mode  Precedence
---------+---------------------------+-------------+-----+-----------
BSR       225.0.0.0/24                172.21.63.11  asm   192
```
BSR       225.0.0.0/24                214.0.0.7     asm   192
BSR       225.0.0.0/8                 40.1.50.25    bidir 192

-> show ip pim group-map static-rp

<table>
<thead>
<tr>
<th>Origin</th>
<th>Group Address/Pref Length</th>
<th>RP Address</th>
<th>Mode</th>
<th>Precedence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Static RP 226.0.0.0/8</td>
<td>10.11.203.8</td>
<td>bidir  none</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Static RP 232.0.0.0/8</td>
<td>ssm</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Output definitions

**Origin**
The mechanism by which the PIM mode and RP for the group were learned. The possible values include 'static RP' for local static RP configuration, 'static SSM' for both SSM group configuration and Dense Mode Group configuration, and 'BSR' for the PIM Bootstrap Router mechanism.

**Group Address/Prefix Length**
The 32-bit IP address for a multicast group, along with the mask length, shown in bits. The group IP address and mask are separated by a slash (/).

**RP Address**
The IP address of the Rendezvous Point to be used for groups within the group prefix. There is no RP address if the PIM mode is either SSM or DM.

**Mode**
The PIM mode to be used for groups in this prefix.

**Mapping Precedence**
The precedence value of a particular row, which determines which row applies to a given group address. Numerically higher values for this object indicate lower precedences, with the value zero denoting the highest precedence.

Release History

Release 7.1.1; command was introduced.
Release 7.3.4; bidir mode support added.

Related Commands

**ip pim ssm group**
Creates and manages the static configuration of a Source Specific Multicast mode group mappings.

**ip pim dense group**
Creates and manages the static configuration of dense mode (DM) group mappings.

**ip pim static-rp**
Adds, modifies, or deletes a static RP for a group (“modifies” applies only to the RP address, since the table is indexed from group address and mask parameters).

show ip pim interface

Displays detailed PIM settings for a specific interface. In general, it displays PIM settings for all the interfaces if no argument is specified.

show ip pim interface [if_name]

Syntax Definitions

if_name

The interface name.

Defaults

By default, displays a summary list of IP PIM interfaces.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

Join/Prune Triggered Delay  = 100

output definitions

Interface Name            The name of the interface on which PIM is enabled.
IP address                Specifies the IP address of the specified interface.
Designated Router         The 32-bit IP address for the Designated Router (DR). The DR acts on behalf of any directly-connected hosts with respect to the PIM-SM protocol. Only one router in the LAN will act as the DR.
Hello Interval            The frequency at which PIM Hello messages are transmitted on a specified interface. Values may range from 1 to 18000. The default value is 30.
Triggered Hello Interval   The current Triggered Hello Interval. This value indicates the maximum time, in seconds, before a triggered PIM Hello message is transmitted on the corresponding interface. Values may range from 1 to 60. The default value is 5.
Hello Holdtime            The current Hello Holdtime value. This value indicates the maximum amount of time, in seconds, Hello messages will be held before they are considered invalid. Values may range from 0 to 65535. The default value is 105.
Join/Prune Interval        The Join/Prune interval for the associated interface. The Join/Prune interval is the interval at which periodic PIM-SM Join/Prune messages are sent. Values may range from 1 to 18000.
Join/Prune Holdtime        The current Join/Prune Holdtime value. This value indicates the maximum amount of time, in seconds, Join/Prune messages will be held before they are considered invalid. Values may range from 0 to 65535. The default value is 210.
Propagation (Prune) Delay  The expected propagation delay between PIM routers on this network.
Override Interval          The current Override Interval. This value is used to avoid synchronization of override messages when multiple downstream routers share a multi-access link. The sending of override messages is delayed at random time intervals. The amount of randomization used by a router is dictated by this number. Values may range from 0 to 65535. The default value is 2500.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Generation ID</strong></td>
<td>The value of the Generation ID this router inserted in the last PIM Hello message it sent on this interface.</td>
</tr>
<tr>
<td><strong>DR Priority</strong></td>
<td>Displays the Designated Router priority for each interface. This value is used in determining the Designated Router on an interface. Values may range from 1 to 192. A higher numeric value denotes a higher priority. Note that priority-based election is used only if all routers on the interface are using the DR priority option. The default value is 1.</td>
</tr>
<tr>
<td><strong>DR Priority Enabled</strong></td>
<td>Evaluates to TRUE if all routers on this interface are using the DR Priority option.</td>
</tr>

<td><strong>Lan Delay Enabled</strong></td>
<td>Options include true and false. The value will be true if all neighbors on the interface are using the LAN Prune Delay option. Otherwise, the setting will be false.</td>
</tr>
<tr>
<td><strong>Effective Propagation Delay</strong></td>
<td>The Effective Propagation Delay on this interface.</td>
</tr>
<tr>
<td><strong>Effective Override Interval</strong></td>
<td>The Effective Override Interval on this interface.</td>
</tr>
<tr>
<td><strong>Suppression Enabled</strong></td>
<td>Specifies whether the Join suppression is enabled on this interface.</td>
</tr>
<tr>
<td><strong>Stub Interface</strong></td>
<td>Specifies whether this interface is a 'stub interface'. If this is TRUE, then no PIM packets are sent out on this interface, and any received PIM packets are ignored.</td>
</tr>
<tr>
<td><strong>Prune Limit Interval</strong></td>
<td>The minimum interval that must transpire between two successive Prunes sent by a router. This is used only with PIM-DM.</td>
</tr>
<tr>
<td><strong>Graft Retry Interval</strong></td>
<td>Displays the time-interval a router waits for a Graft acknowledgment before resending a Graft on the interface. This is used only with PIM-DM. Values may range from 1 to 65535. The default value is 3.</td>
</tr>
<tr>
<td><strong>State Refresh Enabled</strong></td>
<td>Evaluates to TRUE if all routers on this interface are using the State Refresh option. This is used only by PIM-DM.</td>
</tr>
<tr>
<td><strong>BiDir Capable</strong></td>
<td>Evaluates to TRUE if all routers on this interface are using the Bidirectional Capable option. This is used only by BIDIR-PIM.</td>
</tr>
<tr>
<td><strong>DF Election Robustness</strong></td>
<td>The minimum number of PIM Designated Forwarder (DF) Election messages that must be lost to determine that the DF Election process has failed for this interface. This is used only by BIDIR-PIM.</td>
</tr>
<tr>
<td><strong>Operational Status</strong></td>
<td>The current operational status of the corresponding interface. Options include enabled and disabled. This value indicates whether the IP interface is operationally up. For example, if PIM is enabled on the interface, but the IP interface is currently down, this field will display as disabled. The default setting is disabled. To globally enable or disable PIM on the switch, use the ip pim sparse admin-state and ip pim dense admin-state commands.</td>
</tr>
<tr>
<td><strong>BFD Status</strong></td>
<td>Indicates whether the Bidirectional Forwarding Detection (BFD) protocol is enabled or disabled (the default) for the PIM interface. Configured through the ip pim interface bfd-state command.</td>
</tr>
<tr>
<td><strong>Join/Prune MTU</strong></td>
<td>The configured PIM Join/Prune packet MTU for this interface.</td>
</tr>
<tr>
<td><strong>Join/Prune Triggered Delay</strong></td>
<td>The triggered Join/Prune delay.</td>
</tr>
</tbody>
</table>
**Release History**

Release 7.1.1; command was introduced.
Release 7.3.4; **BiDir Capable** and **DF Election Robustness** fields added.
Release 8.6R1; **Join/Prune MTU** and **Join/Prune Triggered** Delay fields added.

<td>false</td>
<td>enabled</td>
</tr>
<tr>
<td>226.0.0.0/8</td>
<td>10.11.203.8</td>
<td>bidir</td>
<td>false</td>
<td>enabled</td>
</tr>
</tbody>
</table>

output definitions

Group Address/Pref Length: The 32-bit IP address for a multicast group, along with the mask length, shown in bits. The group IP address and mask are separated by a slash (/). To change the current multicast group address and mask, refer to the `ip pim static-rp` command on page 34-19.

RP Address: A 32-bit IP address of the Rendezvous Point (RP). To change the current RP address, refer to the `ip pim static-rp` command on page 34-19.

Mode: The PIM mode to be used for groups in this prefix. The possible values include `asm`, `ssm`, or `bidir`. 
### Output Definitions

<table>
<thead>
<tr>
<th>Override</th>
<th>Specifies this static RP configuration to override the dynamically learned RP information for the specified group(s).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Precedence</td>
<td>Specifies the precedence value to be used for this static RP configuration.</td>
</tr>
<tr>
<td>Status</td>
<td>Displays whether static RP configuration is currently enabled or disabled. Options include enabled and disabled. To change the current status, refer to the <code>ip pim static-rp</code> command.</td>
</tr>
</tbody>
</table>

### Release History

Release 7.1.1; command was introduced.
Release 7.3.4: `bidir` mode support added.

### Related Commands

**ip pim static-rp**

Adds, modifies, or deletes a static RP for a group (“modifies” applies only to the RP address, since the table is indexed from group address and mask parameters).

### MIB Objects

</table>

**Usage Guidelines**

If the group prefixes configured for two or more rows in this table overlap, the row with the greatest prefix length value is used for the overlapping range.

**Examples**

```
-> show ip pim anycast-rp
Anycast RP Address     Router Address     Local     Status
-------------------------------+-------------------+--------+---------
10.10.10.1                10.1.1.2          true    enabled
10.10.10.1                10.1.2.2          false   enabled
```

**output definitions**

- **Anycast RP Address**: The anycast RP address.
- **Router Address**: The router IP address that is a member of the anycast RP set.
- **Local**: Displays whether this entry corresponds to the local router. The value will display true if this entry corresponds to the local router and false if it does not correspond to the local router.
- **Status**: Displays whether the anycast RP configuration is currently enabled or disabled. To change the current status, refer to the `ip pim anycast-rp` command.
Release History

Release 8.6R2; command introduced.

Related Commands

ip pim anycast-rp

Configures the anycast RP set, which is the set of all routers that would act as the RP.

**show ip pim groute**

Displays (*,G) routing table entries for IPv4 PIM.

**show ip pim groute [group_address]**

---

**Syntax Definitions**

- **group_address**
  
  A 32-bit multicast address. If an IP address is not specified, the current PIM status for all multicast route entries are displayed.

---

**Defaults**

By default, the entire (*,G) routing table is displayed. To view more detailed (*,G) state information about a particular group, specify the group address in the command line.

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

show ip pim sgroute

Displays (S,G) routing table entries for IPv4 PIM.

`show ip pim sgroute [source_address group_address]`

Syntax Definitions

- `source_address`: The 32-bit IP address for a specific multicast source.
- `group_address`: A 32-bit multicast address.

Defaults

By default, entire (S,G) routing table is displayed. To view the detailed information for a particular (S,G) entry, use the `source_address` and `group_address` associated with that entry.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- When the `source_address` and `group_address` is specified in the command line, the detailed information displayed also includes the detailed state of every outgoing interface.
- If an IP address is not specified, the current PIM status for all multicast route entries are displayed.

Examples

```
-> show ip pim sgroute
Legend: Flags: D = Dense, S = Sparse, s = SSM Group,
        L = Local, R = RPT, T = SPT, F = Register,
        P = Pruned, O = Originator
Total 1 (S,G)

Source Address Group Address RPF Interface Upstream Neighbor UpTime Flags
------------------------------------------------------------------------------------------------------------
172.21.63.2 225.0.0.0 vlan-30 212.61.30.7 00h:02m:09s ST
172.21.63.2 225.0.0.1 vlan-30 212.61.30.7 00h:02m:09s ST

-> show ip pim sgroute 172.21.63.2 225.0.0.0
(172.21.63.2,225.0.0.0)
UpTime = 00h:02m:16s
PIM Mode = ASM,
Upstream Join State = Joined,
Upstream RPT State = Not Pruned,
```

---

show ip pim df-election

Displays the Designated Forwarder (DF) election state for Rendezvous Point (RP) interfaces. This command applies only to RPs operating in the Bidirectional PIM (BIDIR-PIM) mode.

**show ip pim df-election [rp_address | if_name]**

### Syntax Definitions

- **rp_address**: A 32-bit RP address.
- **if_name**: The interface name.

### Defaults

By default, the DF election state for all RP interfaces.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- When the **rp_address** is specified in the command line, only those interfaces associated with the specified RP address are displayed.
- When the **if_name** is specified in the command line, only information associated with the specified interface is displayed.

### Examples

```
-> show ip pim df-election
RP Address Interface Name DF State Winner Address Uptime Metric Metric Expires Pref
---------------------------------------------------------------
10.11.203.8 vlan-13 Win 10.11.126.3 00h:06m:31s 1 1 00h:00m:24s
vlan-200 Win 10.11.200.1 00h:06m:31s 1 1 00h:00m:24s
vlan-204 Win 10.11.204.8 00h:06m:31s 1 1 00h:00m:24s

**ipv6 pim sparse admin-state**

Enables or disables the IPv6 PIM-SM (sparse mode) globally for IPv6.

`ipv6 pim sparse admin-state {enable | disable}`

---

**Syntax Definitions**

<table>
<thead>
<tr>
<th>enable</th>
<th>Enables PIM-SM globally for IPv6.</th>
</tr>
</thead>
<tbody>
<tr>
<td>disable</td>
<td>Disables PIM-SM globally for IPv6.</td>
</tr>
</tbody>
</table>

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

</tr>
</tbody>
</table>

**Usage Guidelines**

This command must be set to `enable` before PIM-SM can run on the switch. In addition, the `ip load pim` command must be executed. Refer to page 34-3 for more information.

**Examples**

- `-> ipv6 pim sparse admin-state enable`
- `-> ipv6 pim sparse admin-state disable`

**Release History**

Release 7.1.1; command was introduced.
**Related Commands**

- **ipv6 pim interface**
  Enables or disables the PIM protocol on a specific interface.

- **ip load pim**
  Dynamically loads PIM to memory.

- **show ipv6 pim sparse**
  Displays the status of the various global parameters for the IPv6 PIM sparse mode.

**MIB Objects**

- `alaPimsmGlobalConfig`
- `alaPimsmV6AdminStatus`
ipv6 pim bidir admin-state

Enables or disables IPv6 BIDIR-PIM (bidirectional) globally for IPv6.

ipv6 pim bidir admin-state {enable | disable}

Syntax Definitions

<table>
<thead>
<tr>
<th>enable</th>
<th>Enables BIDIR-PIM globally for IPv6.</th>
</tr>
</thead>
<tbody>
<tr>
<td>disable</td>
<td>Disables BIDIR-PIM globally for IPv6.</td>
</tr>
</tbody>
</table>

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>

- **alaPimsmV6BidirStatus**
**ipv6 pim dense admin-state**

Enables or disables the IPv6 PIM-DM (dense mode) globally for IPv6.

```
ipv6 pim dense admin-state {enable | disable}
```

### Syntax Definitions

- **enable**: Enables PIM-DM globally for IPv6.
- **disable**: Disables PIM-DM globally for IPv6.

### Defaults

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
<tr>
<td>disable</td>
<td>disable</td>
</tr>
</tbody>
</table>

<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

This command must be set to **enable** before PIM-DM can run on the switch. In addition, the **ip load pim** command must be executed. Refer to page 34-3 for more information.

### Examples

```
-> ipv6 pim dense admin-state enable
-> ipv6 pim dense admin-state disable
```

### Release History

Release 7.1.1; command was introduced.
**Related Commands**

- `ipv6 pim interface` Enables or disables the PIM protocol on a specific interface.
- `ip load pim` Dynamically loads PIM to memory.
- `show ipv6 pim dense` Displays the status of the various global parameters for the IPv6 PIM dense mode.

**MIB Objects**

- `alaPimdmGlobalConfig`
- `alaPimdmV6AdminStatus`
**ipv6 pim ssm group**

Statically maps the specified IPv6 multicast group(s) to the PIM Source Specific Multicast mode (SSM).

```
ipv6 pim ssm group group_address/prefix_length [[no] override] [priority priority]
no ipv6 pim ssm group group_address/prefix_length
```

### Syntax Definitions

- `group_address` Specifies the IPv6 multicast group address.
- `/prefix_length` Specifies the prefix length of the IPv6 multicast group. Values may range from 4 to 128.
- `override` Specifies the static SSM mode mapping configuration to override the dynamically learned group mapping information for the specified group(s).
- `priority` Specifies the preference value to be used for this static SSM mode configuration and provides fine control over which configuration is overridden by this static configuration. Values may range from 0 to 128.

### Defaults

By default, the priority option is not set and the override option is set to false.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of this command to remove a static configuration of a Source Specific Multicast mode group mapping.
- The IPv6 PIM Source-Specific Multicast (SSM) mode for the default SSM address range (FF3x::/32) reserved by the Internet Assigned Numbers Authority is not enabled automatically and must be configured manually to support SSM.
- You can also map additional IPv6 multicast address ranges for the SSM group using this command. However, the IPv6 multicast groups in the reserved address range can be mapped only to the SSM mode.
- If the group prefixes configured for two or more rows in this table overlap, the row with the greatest prefix length value is used for the overlapping range.
• Specifying the priority value obsoletes the `override` option and once the priority option has been defined, a value of 65535 can be used to unset the priority.

**Examples**

```plaintext
-> ipv6 pim ssm group ff30::1234:abcd/128 priority 50
-> no ipv6 pim ssm group ff30::1234:abcd/128
```

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>

```
ipv6 pim dense group

Statically maps the specified IPv6 multicast group(s) to the PIM Dense mode (DM).

`ipv6 pim dense group group_address/prefix_length [no] override] [priority priority]

no ipv6 pim dense group group_address/prefix_length`

**Syntax Definitions**

- `group_address` Specifies the IPv6 multicast group address.
- `/prefix_length` Specifies the prefix length of the IPv6 multicast group.
- `override` Specifies the static dense mode mapping configuration to override the dynamically learned group mapping information for the specified group(s).
- `priority` Specifies the preference value to be used for this static configuration and provides fine control over which configuration is overridden by this static configuration. Values may range from 0 to 128.

**Defaults**

By default, the priority option is not set and the override option is set to false.

</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove a static configuration of a dense mode group mapping.
- This command specifies the mode as Dense (PIM-DM) for the specified IPv6 multicast group addresses.
- If the group prefixes configured for two or more rows in this table overlap, the row with the greatest prefix length value is used for the overlapping range.
- Specifying the priority value obsoletes the `override` option and once the priority option has been defined, a value of 65535 can be used to unset the priority.

**Examples**

- `-> ipv6 pim dense group ff0e::1234/128 priority 50`
- `-> no ipv6 pim dense group ff0e::1234/128`
Release History

Release 7.1.1; command was introduced.

Related Commands

show ipv6 pim group-map  Displays the IPv6 PIM group mapping table.
show ipv6 pim dense group Displays the static configuration of IPv6 multicast group mappings
                  for PIM Dense Mode (DM).

MIB Objects

alaPimdmDenseGroupTable
    alaPimdmDenseGroupGrpAddress
    alaPimdmDenseGroupGrpPrefixLength
    alaPimdmDenseGroupOverrideDynamic
    alaPimdmDenseGroupPrecedence
    alaPimdmDenseGroupRowStatus
**ipv6 pim cbsr**

Configures the local router as the Candidate-BSR for the PIM domain.

```
ipv6 pim cbsr ipv6_address [priority priority] [mask-length bits]
```

```
no ipv6 pim cbsr ipv6_address
```

### Syntax Definitions

- **ipv6_address**: The IPv6 unicast address that the local router will use to advertise itself as a Candidate-BSR. The specified address must be a domain-wide reachable address.

- **priority**: The priority value of the local router as a Candidate-BSR. Values may range from 0 to 255.

- **bits**: The hash mask length that is advertised in the bootstrap messages for IPv6 PIM (the length of the mask is used in the hash function when computing the Rendezvous Point (RP) for a multicast group). Values may range from 1 to 128.

### Defaults

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>priority</td>
<td>64</td>
</tr>
<tr>
<td>bits</td>
<td>126</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the **no** form of this command to remove the association of the device as a Candidate-BSR for a PIM domain.

- This command is supported only in the sparse mode.

- The information configured using this command is used in the Bootstrap messages.

- Candidate-BSRs also avoid a single point of failure in a PIM domain.

### Examples

```
-> ipv6 pim cbsr 2000::1 priority 100 mask-length 4
```
-> no ipv6 pim cbsr 2000::1

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `show ipv6 pim cbsr` Displays the IPv6 Candidate-BSR information that is used in the Bootstrap messages.

**MIB Objects**

- `pimBsrCandidateBSRTable`
  - `pimBsrCandidateBSRAddress`
  - `pimBsrCandidateBSRPriority`
  - `pimBsrCandidateBSRHashMaskLength`
  - `pimBsrCandidateBSRRowStatus`
**ipv6 pim static-rp**

Adds, modifies, or deletes a static RP for an IPv6 multicast group (“modifies” applies only to the RP address, since the table is indexed from group address and prefix length parameters).

```
ipv6 pim static-rp group_address/prefix_length rp_address [no] bidir [no] override [priority priority]
```

```
no ipv6 pim static-rp group_address/prefix_length rp_address
```

**Syntax Definitions**

- `group_address`: Specifies the IPv6 multicast group address.
- `/prefix_length`: Specifies the prefix length of the IPv6 multicast group.
- `rp_address`: Specifies the IPv6 unicast address of the Rendezvous Point (RP). This must be a domain-wide reachable address.
- `bidir`: Creates the static RP entry for use in the Bidirectional PIM (BIDIR-PIM) mode.
- `override`: Specifies the static RP configuration to override the dynamically learned RP information for the specified group(s).
- `priority`: Specifies the preference value to be used for this static RP configuration and provides fine control over which configuration is overridden by this static configuration. Values may range from 0 to 128.

**Defaults**

By default, the `priority` option is not set, the `override` option is set to false, and the `bidir` option is set to false.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Support</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to delete a static RP configuration.
- Specifying the priority value obsoletes the `override` option.
- If the `bidir` parameter option is not specified with this command, the static RP entry is created for use in the ASM mode.
- The IPv6 PIM Source-Specific Multicast (SSM) mode for the default SSM address range (FF3x::/32) reserved by the Internet Assigned Numbers Authority is not enabled automatically and must be
configured manually to support SSM. You can also map additional IPv6 multicast address ranges for the SSM group. However, the IPv6 multicast groups in the reserved address range can be mapped only to the SSM mode.

- If the group prefixes configured for two or more rows in this table overlap, the row with the greatest prefix length value is used for the overlapping range
- Note that once the priority option has been defined a value of 65535 can be used to unset the priority
- This command is supported only in the sparse mode.

**Examples**

```
-> ipv6 pim static-rp ff0e::1234/128 2000::1 priority 10
-> ipv6 pim static-rp ff0e::1234/128 2000::1 bidir override
-> no ipv6 pim static-rp ff0e::1234/128 2000::1
```

**Release History**

Release 7.1.1; command was introduced.
Release 7.3.4; bidir parameter added.

**Related Commands**

- `show ipv6 pim group-map` Displays the IPv6 PIM group mapping table.
- `show ipv6 pim static-rp` Displays the IPv6 PIM Static RP table, which includes IPv6 multicast group address/prefix length, the static Rendezvous Point (RP) address, and the current status of the Static RP configuration (i.e., enabled or disabled).

**MIB Objects**

- `pimStaticRPTable`  
  `pimStaticRPGrpAddress`
  `pimStaticRPGrpPrefixLength`
  `pimStaticRPRPAddress`
  `pimStaticRPImMode`
  `pimStaticRPOverrideDynamic`

  `pimStaticRPRowStatus`
ipv6 pim anycast-rp

Adds, modifies, or deletes a static RP for an IPv6 multicast group (“modifies” applies only to the RP address, since the table is indexed from group address and prefix length parameters).

ipv6 pim anycast-rp anycast_rp_address rp_address

no ipv6 pim anycast-rp anycast_rp_address rp_address

Syntax Definitions

anycast-rp-address Specifies the anycast RP address.

rp_address Specifies the IPv6 unicast address of the Rendezvous Point (RP) address of a router that is a member of the anycast RP set.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the no form of this command to delete an anycast RP configuration.

- The RP specified by anycast-RP-address is the RP in the anycast RP set. This address must be the same as the RP address in the Static-RP configuration used with the *ipv6 pim static-rp* command if static RP configuration is being used.

- It is recommended not to use Loopback0 as the anycast RP address since Loopback0 is often used as the Router ID by default with the unicast routing protocols. Hence, it is recommended to use one of the additional LoopbackX interfaces for the anycast RP address, but it is not mandatory to be a LoopbackX address.

- The RP specified by rp-address defines the IP address of the prospective RP. This address must be different than the anycast RP address and is used in communication between the different RPs in the anycast RP set. This configuration must be the same on all routers in the Anycast-RP set.

- There must be a separate entry for each of the RPs participating in anycast RP set, including an entry for the local router. This configuration defining the anycast RP set must be the same on all routers participating in anycast RP.

- It is recommended to configure PIM register rate limiting (see *ipv6 pim register-rate-limit*) to limit the sending of PIM register messages with Anycast RP.
• Ensure SPT is enabled (see `ipv6 pim spt admin-state`) when using Anycast RP. If SPT is globally disabled, and Anycast RP configuration is added, this configuration will be ignored for all groups that are operating in Anycast-RP mode.

**Examples**

-> `ipv6 pim static-rp ff00::/8 2001:1::1`
-> `ipv6 pim anycast-rp 2001:1::1 3001:1::1`
-> `ipv6 pim anycast-rp 2001:1::1 3001:1::2`
-> `no ipv6 pim anycast-rp 2001:1::1 3001:1::2`

**Release History**

Release 8.6R2; command introduced.

**Related Commands**

**ipv6 pim static-rp**

Adds, modifies, or deletes a static RP for an IPv6 multicast group (“modifies” applies only to the RP address, since the table is indexed from group address and prefix length parameters).

**show ipv6 pim anycast-rp**

Displays the anycast RP table, which includes the anycast RP address, the RP address, if its the local router, and the current status of the anycast RP configuration.

**MIB Objects**

`pimAnycastRPSetTable`

- `pimAnycastRPSetAddressType`
- `pimAnycastRPSetAddressAnycastAddress`
- `pimAnycastRPSetAddressRouterAddress`
- `pimAnycastRPSetAddressRowStatus`
ipv6 pim candidate-rp

Configures the local router as the Candidate-Rendezvous Point (C-RP) for a specified IPv6 multicast group(s). This command is supported only in the sparse mode.

`ipv6 pim candidate-rp rp_address group_address/prefix_length [no bidir] [priority priority] [interval seconds]`

`no ipv6 pim candidate-rp rp_address group_address/prefix_length`

### Syntax Definitions

- **rp_address**
  Specifies the IPv6 unicast address that will be advertised as a Candidate-RP. This must be a domain-wide reachable address.

- **group_address**
  Specifies the IPv6 multicast group address for which the local router will advertise itself as a Candidate-RP.

- **/prefix_length**
  Specifies the prefix length of the specified IPv6 multicast group address.

- **bidir**
  Creates a C-RP entry for use in the Bidirectional PIM (BIDIR-PIM) mode.

- **priority**
  Specifies the priority value of the Candidate-RP. Values may range from 0 to 192. The lower the value, the higher the priority.

- **seconds**
  Specifies the interval at which the C-RP advertisements are sent to the bootstrap router, in seconds. Values may range from 1 to 300.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>[no] bidir</td>
<td>no bidir</td>
</tr>
<tr>
<td>priority</td>
<td>192</td>
</tr>
<tr>
<td>seconds</td>
<td>60</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of this command to remove the association of the device as a C-RP for a particular multicast group.
- Only one RP address is supported per switch. If multiple candidate-RP entries are defined, they must specify the same `rp-address`. 
• If the `bidir` parameter option is not specified with this command, the C-RP entry is created for use in the ASM mode.

**Examples**

```
-> ipv6 pim candidate-rp 2000::1 ff0e::1234/128 priority 100 interval 100
-> ipv6 pim candidate-rp 2000::1 ff0e::1234/128 bidir priority 100 interval 100
-> no ipv6 pim candidate-rp 2000::1 ff0e::1234/128
```

**Release History**

Release 7.1.1; command was introduced.
Release 7.3.4; `bidir` parameter added.

**Related Commands**

`show ipv6 pim candidate-rp` Displays the IPv6 multicast groups for which the local router will advertise itself as a Candidate-RP.

**MIB Objects**

`pimBsrCandidateRPTable`

`pimBsrCandidateRPRowStatus`
ipv6 pim rp-switchover

Enables or disables an RP to attempt switching to native forwarding upon receiving the first register-encapsulated packet in the IPv6 PIM domain. This command is supported only in the sparse mode.

ipv6 pim rp-switchover {enable | disable}

Syntax Definitions

<table>
<thead>
<tr>
<th>enable</th>
<th>Enables the RP to switch to native forwarding.</th>
</tr>
</thead>
<tbody>
<tr>
<td>disable</td>
<td>Disables the RP from switching to native forwarding.</td>
</tr>
</tbody>
</table>

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

You cannot specify a pre-configured threshold, such as the RP threshold, as you would do for IPv4 PIM.

Examples

`-> ipv6 pim rp-switchover enable`

`-> ipv6 pim rp-switchover disable`

Release History

Release 7.1.1; command was introduced.
**Related Commands**

**show ipv6 pim sparse**  
Displays the status of the various global parameters for the IPv6 PIM sparse mode.

**MIB Objects**

alaPimsmGlobalConfig

alaPimsmV6RPSwitchover
**ipv6 pim register-rate-limit**

Configures the maximum number of PIM Register Packets that the Designated Router (DR) will send per second for each (S,G) entry. This command is supported only in the sparse mode.

```plaintext
ipv6 pim register-rate-limit pps
```

---

**Syntax Definitions**

`pps` The per (S,G) register rate limit in packets per second (0–65535).

---

**Defaults**

By default, the register rate limit is set to zero.

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- Setting the register rate limit to zero (the default) disables register rate limiting.
- Rate limiting is applied on a per (S,G) flow basis.
- This command is supported in both IPv4 and IPv6 PIM.

---

**Examples**

```plaintext
-> ipv6 pim register-rate-limit 100
-> ipv6 pim register-rate-limit 0
```

---

**Release History**

Release 8.4.1.R02; command was introduced.
**Related Commands**

- **show ipv6 pim sparse**
  Displays the status of the various global parameters for the IPv6 PIM sparse mode.

- **show ip pim sparse**
  Displays the status of the various global parameters for the PIM sparse mode.

**MIB Objects**

- aLaPimsmGlobalConfigTable
  - aLaPimsmV6RegisterRateLimit
**ipv6 pim register-packing**

Enables or disables the PIM Register Message Packing.

`ipv6 pim register-packing {enable | disable | force-enable}`

### Syntax Definitions

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>Enables the PIM register packing.</td>
</tr>
<tr>
<td>disable</td>
<td>Disables the PIM register packing.</td>
</tr>
<tr>
<td>force-enable</td>
<td>Force enables the PIM register packing</td>
</tr>
</tbody>
</table>

### Defaults

By default, PIM register packing is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Model</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900V72/C32</th>
<th>6900X48C6/T48C6</th>
<th>6900X48C4E/V48C8/C32E/T24C2</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>Support</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- When using this command with Anycast-RP, PIM register packing should be enabled only if it is supported by all PIM anycast RP members in the RP set for the RP address.

- It is recommended to use the configuration value of "force-enable" on all the routers in the domain, when register message packing is desired and Anycast-RP is used.

- When the value “force-enable” is used, the null registers will automatically be packed without waiting for acknowledgment from an RP on whether or not the packing of register messages is supported.

- This command is supported only in the sparse mode.

### Examples

- `ipv6 pim register-packing enable`
- `ipv6 pim register-packing force-enable`
- `ipv6 pim register-packing disable`

### Release History

Release 8.7R2; command was introduced.
**Related Commands**

- `show ipv6 pim sparse` Displays the status of the various global parameters for the PIM sparse mode.
- `ipv6 pim register-mtu` Configures the maximum size of messages used for PIM packed register messages.
- `ipv6 pim register-delay` Configures the Triggered Register Delay interval in milliseconds.

**MIB Objects**

- `alaPimsmGlobalConfig`
- `alaPimsmV6RegisterMsgPackingStatus`
**ipv6 pim register-mtu**

Configures the maximum size of messages used for PIM packed register messages.

```
ipv6 pim register-mtu num
```

### Syntax Definitions

- **num**: Specify the maximum MTU size of the PIM packed register messages in bytes.

### Defaults

By default, the value is 1500.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Support</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Before using this command, enable or force-enable PIM register packing by using the `ipv6 pim register-packing` command.
- Use this command to configure the maximum MTU size of packed PIM register messages sent out.
- If the MTU size of the packet is larger than the interface that is used to send the packed messages, those packets may be dropped.
- It is not recommended to configure to a large value unless it is known that all the RP routers in the domain can support the MTU size in order to avoid any fragmentation and reassembly of the packets.
- This command is supported only in the sparse mode.

### Examples

```
-> ipv6 pim register-mtu 1000
```

### Release History

Release 8.7R2; command was introduced.
**Related Commands**

- **show ipv6 pim sparse**
  Displays the status of the various global parameters for the PIM sparse mode.

- **ipv6 pim register-packing**
  Enables or disables the PIM Register Message Packing.

- **ipv6 pim register-delay**
  Configures the Triggered Register Delay interval in milliseconds.

**MIB Objects**

- **alaPimsmGlobalConfig**
- **alaPimsmV6PackedRegisterMsgMtu**
### ipv6 pim register-delay

Configures the Triggered Register Delay interval in milliseconds.

```
ipv6 pim register-delay <num>
```

#### Syntax Definitions

- `num` Specify the Triggered Register Delay interval in milliseconds.

#### Defaults

By default, the value is “0”.

#### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

#### Usage Guidelines

- Before using this command, enable or force-enable PIM register packing by using the `ipv6 pim register-packing` command.

- Use this command to configure the Triggered Register Delay interval in milliseconds and to control the packing of initial bursts of triggered Null Register messages.

- This command is supported only in the sparse mode.

#### Examples

```
-> ipv6 pim register-delay 100
```

#### Release History

Release 8.7R2; command was introduced.
**Related Commands**

- `show ipv6 pim sparse` Displays the status of the various global parameters for the PIM sparse mode.
- `ipv6 pim register-packing` Enables or disables the PIM Register Message Packing.

- `alaPimsmGlobalConfig`  
  `alaPimsmV6PackedRegisterMsgDelay`
ipv6 pim spt admin-state

Enables or disables last hop Designated Router (DR) switching to the Shortest Path Tree (SPT). This command is supported only in the sparse mode.

ipv6 pim spt admin-state {enable | disable}

Syntax Definitions

<table>
<thead>
<tr>
<th>enable</th>
<th>Enables last hop DR switching to the SPT.</th>
</tr>
</thead>
<tbody>
<tr>
<td>disable</td>
<td>Disables last hop DR switching to the SPT.</td>
</tr>
</tbody>
</table>

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

If the SPT status is enabled, last hop DR switching to the SPT begins once the first data packet is received.

Examples

- `ipv6 pim spt admin-state enable`
- `ipv6 pim spt admin-state disable`

Release History

Release 7.1.1; command was introduced.
Related Commands

show ipv6 pim sparse  Displays the status of the various global parameters for the IPv6 PIM sparse mode.

MIB Objects

alaPimsmGlobalConfig
alaPimsmV6SPTConfig
ipv6 pim interface

Enables IPv6 PIM and configures the statistics such as hello-interval, triggered-hello, hello-holdtime, join/prune, prune-delay, override-interval, dr-priority, stub interface, prune limit interval, and graft retry interval on the IPv6 interface.

ipv6 pim interface if_name
   [hello-interval seconds]
   [triggered-hello seconds]
   [joinprune-interval seconds]
   [hello-holdtime seconds]
   [joinprune-holdtime seconds]
   [prune-delay milliseconds]
   [override-interval milliseconds]
   [dr-priority priority]
   [prune-limit-interval seconds]
   [graft-retry-interval seconds]
   [df-election-robustness messages]
   [[no] stub]
   [joinprune-mtu bytes]
   [joinprune-delay milliseconds]

no ipv6 pim interface if_name

Syntax Definitions

if_name
   The interface name on which the IPv6 PIM is being enabled or disabled.

hello-interval seconds
   The frequency at which IPv6 PIM Hello messages are transmitted on
   this interface, in seconds. Values may range from 0 to 18000.

triggered-hello seconds
   Specifies the maximum time, in seconds, before a triggered IPv6 PIM
   Hello message is sent on this interface. Values may range from 0 to 60.

joinprune-interval seconds
   The frequency at which periodic IPv6 PIM Join/Prune messages are sent
   on this interface, in seconds. Values may range from 0 to 18000.

hello-holdtime seconds
   Specifies the value of the IPv6 PIM hello-holdtime for this interface.
   This value is set in the Holdtime field of IPv6 PIM Hello messages sent
   on this interface, in seconds. Values may range from 0 to 65535.

joinprune-holdtime seconds
   Specifies the value that is set in the Holdtime field of the IPv6 PIM
   Join/prune messages sent on this interface, in seconds. Values may range
   from 0 to 65535.

prune-delay milliseconds
   Specifies the value of the expected propagation delay between IPv6 PIM
   routers on this network, inserted into the LAN prune-delay option of the
   IPv6 PIM Hello messages sent on this interface, in milliseconds. Values
   may range from 0 to 32767.

override-interval milliseconds
   Specifies the value set in the Override Interval field of the LAN prune-
   delay option of the IPv6 PIM Hello messages sent on this interface, if
   the prune-delay status is enabled, in milliseconds. Values may range
   from 0 to 65535.
**dr-priority** *priority*

Specifies the Designated Router priority set in the DR priority option on this interface. The DR priority option value (1–192). A higher numeric value denotes a higher priority.

**prune-limit-interval** *seconds*

Specifies the minimum interval that must elapse between two successive IPv6 PIM prune messages sent on this interface, in seconds. Values may range from 0 to 65535.

**graft-retry-interval** *seconds*

Specifies the minimum interval that must elapse between two successive IPv6 PIM graft messages sent on this interface, in seconds. Values may range from 0 to 65535.

**df-election-robustness** *messages*

The minimum number of DF-Election messages that must be lost in order for the DF Election to fail on the specified interface. Values may range from 1–65535. This value is used only by BIDIR-PIM.

**stub**

Specifies the interface not to send any IPv6 PIM packets through this interface, and to ignore received IPv6 PIM packets.

**joinprune-mtu** *bytes*

Specifies the maximum size used for PIM Join/Prune packets getting sent out this interface. Values may range from 0 to 9198.

**joinprune-delay** *milliseconds*

Specifies the Join/Prune delay interval in milliseconds. Values may range from 0 to 32767.

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of this command to delete an IPv6 PIM interface.

- IPv6 PIM must be enabled globally on the switch before IPv6 PIM will begin running on the interface. To globally enable or disable IPv6 PIM-SM on the switch, refer to the `ipv6 pim sparse admin-state` command on page 34-133. To enable or disable IPv6 PIM-DM on the switch, refer to the `ipv6 pim dense admin-state` command on page 34-137.

- Specifying zero for IPv6 PIM hello-interval represents an infinite time, in which case the periodic IPv6 PIM hello messages are not sent.

- Specifying zero for IPv6 PIM joinprune-interval represents an infinite time, in which case the periodic IPv6 PIM joinprune messages are not sent.

- Specifying the value of 65535 for IPv6 PIM hello-holdtime represents an infinite time. If an IPv6 PIM router gets IPv6 PIM Hello packet from a neighbor with its hello-holdtime value as infinite time, then the router will not time out the sender (neighbor). It is recommended that you use an IPv6 PIM hello-holdtime interval that is 3.5 times the value of the IPv6 PIM hello-interval, or 65535 seconds if the IPv6 PIM hello-interval is set to zero.

- Specifying the value of 65535 for IPv6 PIM joinprune-holdtime represents an infinite time. The receipt of IPv6 Join/Prune messages with its joinprune-holdtime value as infinite time, then this specifies an infinite holdtime for the particular IPv6 join/prune message. It is recommended that you use a joinprune-holdtime interval that is 3.5 times the value of the IPv6 PIM Join/Prune interval defined for the interface, or 65535 seconds if the IPv6 PIM joinprune-interval is set to zero.

- The interface configured as a stub will not send any IPv6 PIM packets through that interface, and any received IPv6 PIM packets are also ignored. By default, an IPv6 PIM interface is not set to be a stub.

- The IPv6 PIM `graft-retry-interval` and `prune-limit-interval` options can be used only with the IPv6 PIM-DM mode.

- If the IPv6 interface on which PIM is enabled is bound to an SPB service, then PIM can operate over an SPB L3 VPN in-line routing configuration (supported only on the OmniSwitch 9900).

- By default, `joinprune-mtu` value is ‘0’ and the configured interface MTU value will be used in determining the maximum packet size that can be used in sending the packed messages. However, if the Join/Prune MTU configuration is specified, the actual maximum size used for PIM Join/Prune messages will be the smaller of the IP MTU value of the interface and the configured interface Join/Prune MTU value.

- The `joinprune-delay` interval is used to delay the sending of triggered Join/Prune messages and may be desirable to allow the packing of triggered Join/Prune messages due to bursts of protocol messages, which may result in subsequent bursts of triggered Join/Prune packets. The default value of ‘0’ implies no deferred processing and will result in no packing of triggered Join/Prune packets.
**Examples**

-> ipv6 pim interface vlan-2 hello-interval 100 triggered-hello 10 joinprune-interval 100 hello-holdtime 350 joinprune-holdtime 400
-> no ipv6 pim interface vlan-2

**Release History**

Release 7.1.1; command was introduced.
Release 7.3.4: `df-election robustness` parameter added.
Release 8.6R1; `joinprune-mtu, joinprune-delay` parameters added.

**Related Command**

`show ipv6 pim interface` Displays detailed IPv6 PIM settings for a specific interface.

ipv6 pim bfd-state

Enables or disables the registration of IPv6 PIM with the BFD protocol.

ipv6 pim bfd-state {enable | disable}

Syntax Definitions

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>Enables BFD for IPv6 PIM.</td>
</tr>
<tr>
<td>disable</td>
<td>Disables BFD for IPv6 PIM.</td>
</tr>
</tbody>
</table>

Defaults

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>Support</th>
</tr>
</thead>
<tbody>
<tr>
<td>6360</td>
<td>No</td>
</tr>
<tr>
<td>6465</td>
<td>No</td>
</tr>
<tr>
<td>6560</td>
<td>No</td>
</tr>
<tr>
<td>6570M</td>
<td>No</td>
</tr>
<tr>
<td>6860</td>
<td>Yes</td>
</tr>
<tr>
<td>6860N</td>
<td>Yes</td>
</tr>
<tr>
<td>6865</td>
<td>Yes</td>
</tr>
<tr>
<td>6900</td>
<td>Yes</td>
</tr>
<tr>
<td>6900 V72/C32</td>
<td>Yes</td>
</tr>
<tr>

</tr>
<tr>
<td>6900 X48C6/E48C8/</td>
<td>Yes</td>
</tr>
<tr>
<td>6900 C32E/T24C2/</td>
<td>Yes</td>
</tr>
<tr>
<td>6900 X24C2</td>
<td>Yes</td>
</tr>
<tr>
<td>9900</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- BFD must be globally enabled for the switch and PIM must be registered with BFD at the protocol level before PIM can interact with BFD.
- All the status changes on the neighbors are received from the BFD level and PIM acts based upon the BFD message.
- Whenever a neighbor goes down, PIM will inform BFD to remove that neighbor from the BFD active list.

Examples

Globally enables the BFD protocol for the switch:

```
-> ip bfd admin-state enable
```

Enables and disables the registration of IPv6 PIM with the BFD protocol:

```
-> ipv6 pim bfd-state enable
-> ipv6 pim bfd-state disable
```

Release History

Release 8.4.1.R03; command was introduced.
**Related Commands**

- `ip bfd admin-state` Enables or disables the global BFD protocol status for the switch.
- `ipv6 pim bfd-state all-interfaces` Enables or disables BFD monitoring for all PIM interfaces in the switch configuration.
- `ipv6 pim interface bfd-state` Enables or disables BFD monitoring on a specific PIM interface.
- `show ipv6 pim sparse` Displays the status of the various global parameters for the PIM sparse mode.
- `show ipv6 pim dense` Displays the status of the various global parameters for the PIM dense mode.

**MIB Objects**

- `alaPimGlobal`
- `alaPimBfdStatus`
ipv6 pim bfd-state all-interfaces

Enables or disables BFD monitoring for all PIM interfaces in the switch configuration.

ipv6 pim bfd-state all-interfaces {enable | disable}

Syntax Definitions

enable  Enables BFD for all the IPv6 PIM interfaces.
disable Disables BFD for all the IPv6 PIM interfaces.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

The BFD status for PIM must be enabled before PIM can interact with BFD.

Examples

- -> ipv6 pim bfd-state all-interfaces enable
- -> ipv6 pim bfd-state all-interfaces disable

Release History

Release 8.4.1.R03; command was introduced.

Related Commands

ipv6 pim bfd-state  Enables or disables the registration of PIM with the BFD protocol.
ipv6 pim interface bfd-state Enables or disables BFD monitoring on a specific PIM interface.
show ipv6 pim interface Displays detailed PIM settings for a specific interface.

MIB Objects

alaPimGlobalConfig
alaPimBfdAllInterfaceStatus
ipv6 pim interface bfd-state

Enables or disables BFD monitoring for a specific PIM interface.

`ipv6 pim interface if_name bfd-state {enable | disable}`

**Syntax Definitions**

- `if_name`: The name of an existing IPv6 PIM interface.
- `enable`: Enables BFD for the specified PIM interface.
- `disable`: Disables BFD for the specified PIM interface.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>enable</code></td>
<td><code>disable</code></td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

|------|------|------|-------|------|-------|------|------|--------------|---------------------------------|------|
| No   | No   | No   | No    | Yes  | Yes   | Yes  | Yes  | Yes          | Yes                            | Yes

**Usage Guidelines**

- Registering PIM with BFD is required at the protocol level before PIM can interact with BFD.
- When BFD is enabled on the specified PIM interface, BFD monitors the connectivity to all neighbors known through the specified interface.

**Examples**

- `-> ipv6 pim interface pimInt1 bfd-state enable`
- `-> ipv6 pim interface pimInt1 bfd-state disable`

**Release History**

Release 8.4.1.R03; command was introduced.
**Related Commands**

- **ipv6 pim bfd-state** Enables or disables the registration of PIM with the BFD protocol.
- **ipv6 pim bfd-state all-interfaces** Enables or disables BFD monitoring for all PIM interfaces in the switch configuration.
- **show ipv6 pim interface** Displays detailed PIM settings for a specific interface.

**MIB Objects**

- **alaPimInterfaceAugTable**
  - **alaPimBfdStatus**
ipv6 pim bidir ssm-compat

Configures the status of the Source-specific Multicast (SSM) compatibility mode. When enabled, an IPv6 BIDIR-PIM router will support receiving MLDv2 SSM joins and process them as a (*,G) join.

ipv6 pim bidir ssm-compat {enable | disable}

Syntax Definitions

<table>
<thead>
<tr>
<th></th>
<th>Administratively enables the IPv6 BIDIR/SSM compatibility mode.</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
<tr>
<td>disable</td>
<td>Administratively disables IPv6 BIDIR/SSM compatibility mode.</td>
</tr>
</tbody>
</table>

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>V72/C32</th>
<th>6900</th>
<th>X48C6/T48C6/</th>
<th>6900</th>
<th>X48C4E/V48C8/</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- When the SSM compatibility mode is disabled, MLDv2 SSM joins are ignored by the IPv6 BIDIR-PIM router.
- This command is only applicable if IPv6 BIDIR-PIM is globally enabled for the switch.

Examples

- ipv6 pim bidir ssm-compat enable
- ipv6 pim bidir ssm-compat disable

Release History

Release 8.3.1.R02; command was introduced.
**Related Commands**

*show ipv6 pim sparse* Displays the status of the various global parameters for the IPv6 PIM sparse mode.

**MIB Objects**

alaPimsmGlobalConfig
alaPimsmV6BidirSsmCompat
ipv6 pim bidir fast-join

Configures whether or not an IPv6 BIDIR-PIM router will automatically create (*,G) routes in the hardware as soon as IPv6 BIDIR (*,G) routes are learned.

ipv6 pim bidir fast-join {enable | disable}

Syntax Definitions

| enable | Administratively enables the IPv6 BIDIR-PIM fast join functionality. |
| disable | Administratively disables the IPv6 BIDIR-PIM fast join functionality. |

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

Platforms Supported

Not supported in this release.

Usage Guidelines

- This command is only applicable if IPv6 BIDIR-PIM is globally enabled for the switch.
- When the IPv6 BIDIR fast join functionality is enabled, convergence of multicast traffic may occur faster because the (*,G) routes are already created before the actual multicast traffic is received.
- When the IPv6 BIDIR fast join functionality is disabled (the default), routes are not created in the hardware until the multicast traffic reaches the switch.

Examples

-> ipv6 pim bidir fast-join enable
-> ipv6 pim bidir fast-join disable

Release History

Release 8.3.1.R02; command was introduced.

Related Commands

| show ipv6 pim sparse | Displays the status of the various global parameters for the IPv6 PIM sparse mode. |

MIB Objects

<table>
<thead>
<tr>
<th>alaPimsmGlobalConfig</th>
</tr>
</thead>
<tbody>
<tr>
<td>alaPimsmV6BidirFastJoin</td>
</tr>
</tbody>
</table>
**ipv6 pim sparse asm-fast-join**

Configures whether or not an IPv6 PIM Sparse router will automatically create (*,G) routes in the hardware as soon as the IPv6 (*,G) routes are learned.

`ipv6 pim sparse asm-fast-join {enable | disable}`

---

**Syntax Definitions**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>Administratively enables the IPv6 PIM Sparse ASM fast join functionality.</td>
</tr>
<tr>

<td>Administratively disables the IPv6 PIM Sparse ASM fast join functionality.</td>
</tr>
</tbody>
</table>

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

Not supported in this release.

**Usage Guidelines**

- This command is only supported in the IPv6 PIM Sparse mode.
- When the IPv6 PIM Sparse fast join functionality is enabled, convergence of multicast traffic may occur faster because the (*,G) routes are already created before the actual multicast traffic is received.
- When the IPv6 PIM Sparse fast join functionality is disabled (the default), routes are not created in the hardware until the multicast traffic reaches the switch.
- This option should be used with caution due to the complicated nature of IPv6 PIM ASM, which involves forwarding on the shared tree, the sending and receiving of PIM register packets, and switching to the SPT. As a result, only enable the IPv6 ASM fast join function when there are no other locally attached sources, the router is not the RP, and the SPT is disabled.

**Examples**

- `ipv6 pim sparse asm-fast-join enable`
- `ipv6 pim sparse asm-fast-join disable`

**Release History**

Release 8.3.1.R02; command was introduced.
Related Commands

- **show ipv6 pim sparse**
  Displays the status of the various global parameters for the IPv6 PIM sparse mode.

MIB Objects

- `alaPimsmGlobalConfig`
- `alaPimsmV6AsmFastJoin`
**ipv6 pim sparse ssm-fast-join**

Configures whether or not an IPv6 PIM Sparse router will automatically create both IPv6 PIM Sparse and SSM (S,G) routes in the hardware as soon as the IPv6 (S,G) routes are learned.

```
ipv6 pim sparse ssm-fast-join {enable | disable}
```

### Syntax Definitions

<table>
<thead>
<tr>
<th>enable</th>
<th>Administratively enables the IPv6 PIM SSM fast join functionality.</th>
</tr>
</thead>
<tbody>
<tr>
<td>disable</td>
<td>Administratively disables the IPv6 PIM SSM fast join functionality.</td>

<tr>
<td>ip pim max-rps</td>
<td>Configures the maximum number of C-RP routers allowed in the PIM-SM domain.</td>
</tr>
<tr>
<td>ip pim probe-time</td>
<td>Configures the amount of time before the Register Suppression timer expires, at which point the Designated Router (DR) sends a Null Register message to the Rendezvous Point (RP). This allows the RP to refresh the Register-Stop. If the Register Suppression timer expires, the DR will resume encapsulating packets from the source to the RP.</td>
</tr>
<tr>
<td>ip pim register-suppress-timeout</td>
<td>Specifies the period during which a Designated Router (DR) stops sending Register-encapsulated packets to the Rendezvous Point (RP) after receiving a Register-Stop message.</td>
</tr>
<tr>
<td>ipv6 pim rp-switchover</td>
<td>Enables or disables an RP to attempt switching to native forwarding upon receiving the first register-encapsulated packet in the IPv6 PIM domain.</td>
</tr>
<tr>
<td>ipv6 pim register-rate-limit</td>
<td>Specifies the maximum number of PIM Register Packets that the Designated Router (DR) will send per second for each (S,G) entry.</td>
</tr>
<tr>
<td>ipv6 pim spt admin-state</td>
<td>Enables or disables last hop DR switching to the Shortest Path Tree (SPT). If enabled, last hop DR switching to the SPT begins once the first multicast data packet is received.</td>
</tr>
</tbody>
</table>
### PIM Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ipv6 pim bidir admin-state</code></td>
<td>Globally enables or disables BIDIR-PIM protocol on the switch.</td>
</tr>
<tr>
<td><code>ip pim df-periodic-interval</code></td>
<td>Configures the time interval at which the DF for each RP address periodically announces its status in a Winner message.</td>
</tr>
<tr>
<td><code>ip pim df-abort</code></td>
<td>Configures whether or not the DF election process is stopped when a PIM Hello message received from a PIM neighbor does not contain the Bidirectional Capable option.</td>
</tr>
<tr>
<td><code>ipv6 pim interface</code></td>
<td>Enables IPv6 PIM and configures statistics on the interface.</td>
</tr>
<tr>
<td><code>ipv6 pim bfd-state</code></td>
<td>Enables or disables BFD for the PIM router.</td>
</tr>
<tr>
<td><code>ipv6 pim sparse asm-fast-join</code></td>
<td>Configures the status of the PIM Sparse fast join operation for ASM routes.</td>
</tr>
<tr>
<td><code>ipv6 pim sparse ssm-fast-join</code></td>
<td>Configures the status of the PIM Sparse fast join operation for both PIM Sparse and SSM routes.</td>
</tr>
<tr>
<td><code>ipv6 pim bidir fast-join</code></td>
<td>Configures the status of the BIDIR-PIM fast join operation.</td>
</tr>
<tr>
<td><code>ipv6 pim bidir ssm-compat</code></td>
<td>Configures the SSM compatibility mode for a BIDIR-PIM router.</td>
</tr>
<tr>
<td><code>ipv6 pim joinprune-packing</code></td>
<td>Enable or disable PIM Join/Prune message packing.</td>
</tr>
<tr>
<td><code>ipv6 pim register-packing</code></td>
<td>Enables or disables the PIM Register Message Packing.</td>
</tr>
<tr>
<td><code>ipv6 pim register-mtu</code></td>
<td>Configures the maximum size of messages used for PIM packed register messages.</td>
</tr>
<tr>
<td><code>ipv6 pim register-delay</code></td>
<td>Configures the Triggered Register Delay interval in milliseconds.</td>
</tr>
</tbody>
</table>

Release History

Release 7.1.1; command was introduced.

Related Commands

- **ipv6 pim dense admin-state** Enables or disables IPv6 PIM-DM (dense mode) globally on the switch.
- **ip pim keepalive-period** Configures the period during which the (S,G) Join state will be maintained in the absence of (S,G) Join messages or explicit (S,G) local membership.
- **ip pim state-refresh-interval** Sets the interval between successive State Refresh messages originated by a router.
- **ip pim state-refresh-limit** Sets the limit at which a router will not forward successive State Refresh messages if they are received at less than the interval.
- **ip pim state-refresh-ttl** Sets the Time to Live to be used in a router’s originated State Refresh messages if the data packet’s Time to Live is not recorded.
- **ipv6 pim bfd-state** Enables or disables BFD for the PIM router.

</tbody>
</table>

**Usage Guidelines**

If the group prefixes configured for two or more rows in this table overlap, the row with the greatest prefix length value is used for the overlapping range.

**Examples**

```
-> show ipv6 pim dense group
```

```
Group Address/Prefix | RP Address | Mode | Override | Precedence | Status
---------------------|------------|------|----------|------------|--------
ff00::/8             | ::         | dm   | false    | none       | enabled |
ff34::/32            | ::         | dm   | false    | none       | enabled |
```

**output definitions**

- **Group Address/Pref**: The IPv6 multicast group address along with the prefix length.
- **RP Address**: The IPv6 address of the Rendezvous Point (RP) for groups within this group prefix.
- **Mode**: The IPv6 PIM mode that is used for the groups in this prefix.
- **Override**: Specifies this static RP configuration to override the dynamically learned RP information for the specified group(s).
- **Precedence**: The precedence value that can be used for this static RP configuration.
- **Status**: Displays whether this entry is currently enabled or disabled. Options include **enabled** and **disabled**.

output definitions

<table>
<thead>
<tr>
<th>Interface Name</th>
<th>The name of the IPv6 PIM interface.</th>
</tr>
</thead>
<tbody>
<tr>
<td>IPv6 address</td>
<td>Specifies the IPv6 address of the specified interface.</td>
</tr>
<tr>
<td>Designated Router</td>
<td>The primary IP address for the Designated Router (DR). The DR acts on behalf of any directly-connected hosts with respect to the PIM-SM protocol. Only one router in the LAN will act as the DR.</td>
</tr>
<tr>
<td>Hello Interval</td>
<td>The frequency at which PIM Hello messages are transmitted on a specified interface. Values may range from 1 to 18000. The default value is 30.</td>
</tr>
<tr>
<td>Join/Prune Interval</td>
<td>The Join/Prune interval for the associated interface. The Join/Prune interval is the interval at which periodic PIM-SM Join/Prune messages are sent. Values may range from 0 to 18000. The default value is 60.</td>
</tr>
<tr>
<td>Triggered Hello Interval</td>
<td>The current Triggered Hello Interval. This value indicates the maximum time, in seconds, before a triggered PIM Hello message is transmitted on the corresponding interface. Values may range from 0 to 60. The default value is 5.</td>
</tr>
<tr>
<td>Hello Holdtime</td>
<td>The current Hello Holdtime value. This value indicates the maximum amount of time, in seconds, Hello messages will be held before they are considered invalid. Values may range from 0 to 65535. The default value is 105.</td>
</tr>
<tr>
<td>Join/Prune Holdtime</td>
<td>The current Join/Prune Holdtime value. This value indicates the maximum amount of time, in seconds, Join/Prune messages will be held before they are considered invalid. Values may range from 0 to 65535. The default value is 210.</td>
</tr>
<tr>
<td>Propagation Delay</td>
<td>The expected propagation delay between PIM routers on the network. Values may range from 0 to 32767. The default value is 500.</td>
</tr>
<tr>
<td>Override Interval</td>
<td>The current Override Interval. This value is used to avoid synchronization of override messages when multiple downstream routers share a multi-access link. The sending of override messages is delayed at random time intervals. The amount of randomization used by a router is dictated by this number. Values may range from 0 to 65535. The default value is 2500.</td>
</tr>
</tbody>
</table>
### PIM Commands: show ipv6 pim interface

<table>
<thead>
<tr>
<th>Output Definitions (continued)</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Generation ID Option</strong></td>
<td>The value of the Generation ID this router inserted in the last PIM Hello message it sent on this interface.</td>
</tr>
<tr>
<td><strong>DR Priority</strong></td>
<td>Displays the Designated Router priority for each interface. This value is used in determining the Designated Router on an interface. Values may range from 1 to 192. A higher numeric value denotes a higher priority. Note that priority-based election is used only if all routers on the interface are using the DR priority option. The default value is 1.</td>
</tr>
<tr>
<td><strong>Lan Delay Enabled</strong></td>
<td>Options include <strong>true</strong> and <strong>false</strong>. The value will be true if all neighbors on the interface are using the LAN Prune Delay option. Otherwise, the setting will be false.</td>
</tr>
<tr>
<td><strong>Effective Propagation Delay</strong></td>
<td>The Effective Propagation Delay on this interface.</td>
</tr>
<tr>
<td><strong>Effective Override Interval</strong></td>
<td>The Effective Override Interval on this interface.</td>
</tr>
<tr>
<td><strong>Suppression Enabled</strong></td>
<td>Specifies whether the Join suppression is enabled on this interface.</td>
</tr>
<tr>
<td><strong>DR Priority Enabled</strong></td>
<td>Evaluates to <strong>true</strong> if all routers on this interface are using the DR Priority option.</td>
</tr>
<tr>
<td><strong>Stub Interface</strong></td>
<td>Specifies whether this interface is a 'stub interface'. If this is <strong>true</strong>, then no PIM packets are sent out on this interface, and any received PIM packets are ignored.</td>
</tr>
<tr>
<td><strong>Prune Limit Interval</strong></td>
<td>The minimum interval that must transpire between two successive Prunes sent by a router. This is used only with PIM-DM. Values may range from 0 to 65535. The default value is 60.</td>
</tr>
<tr>
<td><strong>Graft Retry Interval</strong></td>
<td>Displays the time-interval a router waits for a Graft acknowledgment before resending a Graft on the interface. This is only used with PIM-DM. Values may range from 0 to 65535. The default value is 3.</td>
</tr>
<tr>
<td><strong>SR Priority Enabled</strong></td>
<td>Evaluates to <strong>true</strong> if all routers on this interface are using the State Refresh option. This is used only by PIM-DM.</td>
</tr>
<tr>
<td><strong>BiDir Capable</strong></td>
<td>Evaluates to <strong>true</strong> if all routers on this interface are using the Bidirectional Capable option. This is used only by BIDIR-PIM.</td>
</tr>
<tr>
<td><strong>DF Election Robustness</strong></td>
<td>The minimum number of PIM Designated Forwarder (DF) Election messages that must be lost to determine that the DF Election process has failed for this interface. This is used only by BIDIR-PIM.</td>
</tr>
<tr>
<td><strong>Operational Status</strong></td>
<td>The current operational status of the corresponding interface. Options include <strong>enabled</strong> and <strong>disabled</strong>. This value indicates whether the IPv6 interface is operationally up. For example, if PIM is enabled on the interface, but the interface is currently down, this field will display as disabled. The default setting is <strong>disabled</strong>. To enable or disable PIM on an interface, refer to the <strong>ipv6 pim interface</strong> command on page 34-163. To globally enable or disable PIM on the switch, refer to the <strong>ipv6 pim sparse admin-state</strong> command on page 34-133 and <strong>ipv6 pim dense admin-state</strong> command on page 34-137.</td>
</tr>
<tr>
<td><strong>BFD Status</strong></td>
<td>Indicates whether the Bidirectional Forwarding Detection (BFD) protocol is <strong>enabled</strong> or <strong>disabled</strong> (the default) for the PIM interface. Configured through the <strong>ipv6 pim interface bfd-state</strong> command.</td>
</tr>
<tr>
<td><strong>Join/Prune MTU</strong></td>
<td>The configured PIM Join/Prune packet MTU for this interface.</td>
</tr>
<tr>
<td><strong>Join/Prune Triggered Delay</strong></td>
<td>The triggered Join/Prune delay.</td>
</tr>
</tbody>
</table>
**Release History**

Release 7.1.1; command was introduced.
Release 7.3.4; **BiDir Capable** and **DF Election Robustness** fields added.
Release 8.6R1; **Join/Prune MTU** and **Join/Prune Triggered** Delay fields added.

**Related Commands**

**ipv6 pim interface**

Enables IPv6 PIM and configures statistics on the interface.

show ipv6 pim neighbor

Displays a list of active IPv6 PIM neighbors.

**show ipv6 pim neighbor [ipv6_address] [if_name]**

**Syntax Definitions**

- **ipv6_address**: The IPv6 address for the PIM neighbor.
- **if_name**: The name of the interface.

**Defaults**

If the neighbor’s IPv6 address or interface name is not specified, the entire IPv6 PIM neighbor table is displayed.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Model</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6/C32E/T24C2</th>

<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

To view more detailed information about a particular neighbor, specify the neighbor's IPv6 address or the associated interface name in the command line. Additional information will be displayed, which includes LAN Prune Delay, Override Interval, TBit field, State Refresh capable, and Designated Router option status.

**Examples**

```
-> show ipv6 pim neighbor
Neighbor Address Interface Name Uptime Expires DR Pri
-----------------------------------------------+-------------------+----------+---------+-----
fe80::2d0:95ff:feac:a537 vlan-30 02h:56m:51s 00h:01m:28s 1
```

If a specific neighbor address is specified in the command line, detailed information for the corresponding neighbor only displays:

```
-> show ipv6 pim neighbor fe80::2d0:95ff:feac:a537
  vlan-30
  Neighbor IPv6 Address = fe80::2d0:95ff:feac:a537,
  Uptime = 02h:57m:09s,
  Expires = 00h:01m:40s,
  Lan Prune Delay Present = True,
  Propagation Delay = 500,
  Override Interval = 2500,
  TBit Field = True,
  Gen ID Present = True,
```
<table>
<thead>
<tr>
<th>Variable</th>

PIM Commands

show ipv6 pim neighbor

**output definitions (continued)**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Propagation Delay</td>
<td>The value of the propagation-delay field of the LAN prune-delay option received from this neighbor. A value of 0 indicates that no LAN prune-delay option was received from this neighbor.</td>
</tr>
<tr>
<td>Override Interval</td>
<td>The current Override Interval of the LAN prune-delay option received from this neighbor. This value is used to avoid synchronization of override messages when multiple downstream routers share a multi-access link. The sending of override messages is delayed at random time intervals. The amount of randomization used by the neighboring router is dictated by this number. Values may range from 0 to 65535. A value of 0 indicates that no LAN prune-delay option was received from this neighbor.</td>
</tr>
<tr>
<td>TBit field</td>
<td>The value of the Tbit field of the LAN prune-delay option received from this neighbor. The Tbit specifies the ability of the neighbor to disable Join suppression.</td>

show ipv6 pim static-rp

Displays the IPv6 PIM Static RP table, which includes IPv6 multicast group address/prefix length, the static Rendezvous Point (RP) address, and the current status of the static RP configuration (i.e., enabled or disabled).

show ipv6 pim static-rp

---

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

If the group prefixes configured for two or more rows in this table overlap, the row with the greatest prefix length value is used for the overlapping range.

Examples

`-> show ipv6 pim static-rp`

<table>
<thead>
<tr>
<th>Group Address/Pref Length</th>
<th>RP Address</th>
<th>Mode</th>
<th>Override</th>
<th>Precedence</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>ff00::/8</td>
<td>3000::11</td>
<td>asm</td>
<td>false</td>
<td>none</td>
<td>enabled</td>
</tr>
<tr>
<td>ff08::/32</td>
<td>2100::8</td>
<td>bidir</td>
<td>false</td>
<td>none</td>
<td>enabled</td>
</tr>
</tbody>
</table>

output definitions

- **Group Address/Pref Length**: The IPv6 multicast group address along with the prefix length.
- **RP Address**: The IPv6 address of the RP that is mapped for the groups within the group prefix. This field is set to zero, if the specified IPv6 PIM mode is SSM or DM.
- **Mode**: The PIM mode to be used for groups in this prefix. The possible values include `asm`, `ssm`, `dm`, or `bidir`.
- **Override**: Specifies that this static RP configuration can override the dynamically learned RP information for the specified group(s).
**output definitions**

| Precedence | The precedence value that is used for this static RP configuration. |
| Status | Displays whether the static RP configuration is currently enabled or disabled. Options include enabled and disabled. |

### Release History

Release 7.1.1; command was introduced.
Release 7.3.4; bidir mode support added.

### Related Commands

**ipv6 pim static-rp**

Adds, modifies, or deletes a static RP for an IPv6 multicast group (“modifies” applies only to the RP address, since the table is indexed from group address and prefix length parameters).

### MIB Objects

pimStaticRPTable
  - pimStaticRPAddressType
  - pimStaticRPGrpAddress
  - pimStaticRPGrpPrefixLength

Usage Guidelines

N/A

Examples

```
-> show ipv6 pim anycast-rp
Anycast RP Address      Router Address      Local    Status
---------------------+-------------------+---------+---------
2001::1           3001::1           true     enabled
2001::1           3001::2           false    enabled
```

output definitions

<table>
<thead>
<tr>
<th>Anycast RP Address</th>
<th>The anycast RP address.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Router Address</td>
<td>The router IPv6 address that is a member of the anycast RP set.</td>
</tr>
<tr>
<td>Local</td>
<td>Displays whether this entry corresponds to the local router. The value will display true if this entry corresponds to the local router and false if it does not correspond to the local router.</td>
</tr>
<tr>
<td>Status</td>
<td>Displays whether the anycast RP configuration is currently enabled or disabled. To change the current status, refer to the ipv6 pim anycast-rp command.</td>
</tr>
</tbody>
</table>
**Release History**

Release 8.6R2; command introduced.

**Related Commands**

- `ipv6 pim anycast-rp`  
  Configures the anycast RP set, which is the set of all routers that would act as the RP.

**MIB Objects**

- `pimAnycastRPSetsTable`
  
  - `pimAnycastRPSetsAddressType`
  
  - `pimAnycastRPSetsAnycastAddress`
  
  - `pimAnycastRPSetsRouterAddress`
  
  - `pimAnycastRPSetsLocalRouter`
  
  - `pimAnycastRPSetsRowStatus`
show ipv6 pim group-map

Displays the IPv6 PIM group mapping table.

show ipv6 pim group-map [bsr | static-rp | ssm | dense]

Syntax Definitions

N/A

Defaults

If the keywords **bsr**, **static-rp**, **ssm**, or **dense** are included in the command line, then only the entries that were created by the specified origin are displayed.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- If static RP configuration is being used, this information is obtained from those static RP addresses that are defined through the **ipv6 pim static-rp** command. As long as the RP addresses defined in the static RP set are reachable, they will be added to the group mapping table.
- If the IPv6 multicast groups are mapped to the mode DM or SSM, then the entries created by local SSM address range configuration using the **ipv6 pim ssm group** command and local Dense Mode address range configuration using the **ipv6 pim dense group** command are displayed.
- If the bootstrap mechanism is being used, this information is obtained from received Candidate-RP advertisements (when the local router is the BSR; when the local router is not the BSR, this information is obtained from received bootstrap messages).

Examples

```bash
-> show ipv6 pim group-map
Origin   Group Address/Pref Length   RP Address    Mode  Precedence
---------+---------------------------+-------------+-----+----------
BSR      ff00::/8                    2000::8       bidir 192
BSR      ff00::/8                    3000::11      asm  192
BSR      ff00::/8                    4000::7       asm  192
SSM      ff33::/32                                 ssm

-> show ipv6 pim group-map bsr
Origin   Group Address/Pref Length   RP Address    Mode  Precedence
---------+---------------------------+-------------+-----+----------
BSR      ff00::/8                    2000::8       bidir 192
```
BSR       ff00::/8                    3000::11      asm   192
BSR       ff00::/8                    4000::7       asm   192

-> show ipv6 pim group-map ssm

<table>
<thead>
<tr>
<th>Origin</th>
<th>Group Address/Pref Length</th>
<th>RP Address</th>
<th>Mode</th>
<th>Precedence</th>
</tr>
</thead>
<tbody>
<tr>
<td>SSM</td>
<td>ff33::/32</td>
<td></td>
<td>ssm</td>
<td></td>
</tr>
</tbody>
</table>

**output definitions**

**Origin**
The mechanism by which the PIM mode and RP for the group were learned. The possible values include 'static RP' for local static RP configuration, 'static SSM' for both static SSM group configuration and Dense Mode Group configuration, and 'BSR' for the PIM Bootstrap Router mechanism.

**Group Address/Prefix Length**
The IPv6 multicast group address along with the prefix length.

**RP Address**
The IPv6 address of the Rendezvous Point to be used for groups within the group prefix.

**Mode**
The IPv6 PIM mode to be used for groups in this prefix. The possible values include **asm**, **ssm**, **dm**, or **bidir**.

**Mapping Precedence**
The precedence value of a particular row, that determines which row applies to a given group address. Numerically higher values for this object indicate lower precedences, with the value zero denoting the highest precedence.

**Release History**

Release 7.1.1; command was introduced.
Release 7.3.4; **bidir** mode support added.

**Related Commands**

**ipv6 pim static-rp**
Adds, modifies, or deletes a static RP for an IPv6 multicast group (“modifies” applies only to the RP address, since the table is indexed from group address and prefix length parameters).

**ipv6 pim ssm group**
Statically maps the specified IPv6 multicast group(s) to the PIM Source Specific Multicast mode (SSM).

**ipv6 pim dense group**
Statically maps the specified IPv6 multicast group(s) to the PIM Dense mode (DM).

**MIB Objects**

**Examples**

-> show ipv6 pim cbsr
CBSR Address = 3000::7,
Status = enabled,
CBSR Priority = 0,
Hash Mask Length = 126,
Elected BSR = False,
Timer = 00h:00m:00s

**output definitions**

- **CBSR Address**: An IPv6 unicast address that the local router uses to advertise itself as a Candidate-BSR.
- **Status**: The current status of this entry. The status is shown as enabled only if the IPv6 PIM-SM is globally enabled and the IPv6 PIM interface is enabled.
- **CBSR Priority**: The value for the local router as a Candidate-BSR. The higher the value, the higher the priority.
- **Hash Mask Length**: The hash mask length that is advertised in the bootstrap messages (the length of the mask is used in the hash function when computing the Rendezvous Point (RP) for an IPv6 multicast group).
**IPv6 PIM Commands**

`show ipv6 pim cbsr`

**Release History**

Release 7.1.1; command was introduced.

</tbody>
</table>

**Usage Guidelines**

N/A

**Examples**

`-> show ipv6 pim bsr`

BSR Address = 3000::7,
BSR Priority = 192,
Hash Mask Length = 126,
Expiry Time = 00h:01m:35s

**output definitions**

- **BSR Address**: The IPv6 unicast address of the elected BSR.
- **BSR Priority**: The priority value of the elected BSR. The higher the value, the higher the priority.
- **Hash Mask Length**: The hash mask length that is advertised in the Bootstrap messages by the elected BSR (the length of the mask is used in the hash function when computing the Rendezvous Point (RP) for a multicast group.
- **Expiry Time**: The minimum time remaining before the elected BSR will be declared down.

**Release History**

Release 7.1.1; command was introduced.
**Related Commands**

**ipv6 pim cbsr**  
Configures the Candidate-BSR information that is used in the Bootstrap messages.

**MIB Objects**

  - `pimBsrElectedBSRExpiryTime`
show ipv6 pim groute

Displays (*,G) routing table entries for IPv6 PIM.

show ipv6 pim groute [group_address]

Syntax Definitions

group_address

The IPv6 address of the Multicast Group.

Defaults

By default, entire (*,G) routing table is displayed. To view more detailed (*,G) state information about a particular group, specify the group address in the command line.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

show ipv6 pim sgroute

Displays (S,G) routing table entries for IPv6 PIM.

**show ipv6 pim sgroute [source_address group_address]**

### Syntax Definitions

- **source_address**: The IPv6 address for a specific multicast source.
- **group_address**: A IPv6 multicast address.

### Defaults

By default, entire (S,G) routing table is displayed. To view the detailed information for a particular (S,G) entry, use the *source_address* and *group_address* associated with that entry.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900 V72/C32</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- When the *source_address* and *group_address* is specified in the command line, the detailed information displayed also includes the detailed state of every outgoing interface.
- If an IPv6 address is not specified, the current PIM status for all multicast route entries are displayed.

### Examples

```
-> show ipv6 pim sgroute

Legend: Flags: D = Dense, S = Sparse, s = SSM Group,
        L = Local, R = RPT, T = SPT, F = Register,
        P = Pruned, O = Originator

Total 1 (S,G)

Source Address       Group Address       RPF Interface   UpTime      Flags
-------------------------------+----------------+-------------+-------------+------

output definitions

Source-address         The IPv6 Source address.
Group-address          The IPv6 Multicast Group Address.
RPF Interface          The RPF interface towards the RP. The ifIndex is converted to the if-
                        name for the display.
Upstream Neighbor      The primary address of the neighbor on the RPF Interface that the local
                        router is sending periodic (S,G) join messages to.
UpTime                 The time since this entry was created.
Flags                  Flags indicating SPTBit, Prune State, Join State, etc.
Pim Mode                Whether the Group Address is SSM, ASM or DM.
Upstream Join State    Whether the local router should join the SPT for the source and group
                        represented by this entry.
Upstream Join Timer    The time remaining before the local router next sends a periodic (S,G)
                        Join message.
RPF Next Hop           The address of the RPF next hop towards the source.
RPF Route Protocol     The routing mechanism through which the route used to find the RPF
                        Interface towards the source was learned.

**show ipv6 pim df-election**

Displays the Designated Forwarder (DF) election state for Rendezvous Point (RP) interfaces. This command applies only to RPs operating in the Bidirectional PIM (BIDIR-PIM) mode.

```
show ipv6 pim df-election [rp_address | if_name]
```

**Syntax Definitions**

- `rp_address`: An IPv6 RP address.
- `if_name`: The interface name.

**Defaults**

By default, the DF election state for all RP interfaces.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

```
<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
</tr>
</thead>

<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>
```

**Usage Guidelines**

- When the `rp_address` is specified in the command line, only those interfaces associated with the specified RP address are displayed.
- When the `if_name` is specified in the command line, only information associated with the specified interface is displayed.

**Examples**

```
-> show ipv6 pim df-election
RP Address   Interface Name   DF State  Winner Address  Uptime       Metric  Metric Expires
-------------------------------+---------+--------+-------------------------------+-------------+-------------+-------------+
2000::8       vlan-13          Win      fe80::220:daff:fe11:2233  00h:10m:15s  1            00h:00m:13s

<td></td>
</tr>
</tbody>
</table>

**Output definitions**

- **RP Address**: The IPv6 address of the Rendezvous Point (RP).
- **Interface Name**: The name of the IPv6 interface.
- **DF State**: The state of the DF election process (*Offer, Lose, Win,* or *Backoff*).
- **Winner Address**: The primary IPv6 address of the winner of the DF election process.
- **UpTime**: The amount of time since the current winner was last elected the DF for the RP.
- **Metric Pref**: The metric preference advertised by the DF winner. This value is zero if there currently is no DF.
- **Metric**: The metric value advertised by the DF winner. This value is zero if there currently is no DF.
- **Expires**: The minimum time remaining before the local router expires the current DF state.

**Release History**

This chapter describes multicast routing commands. Multicast routing is used in conjunction with IP Multicast Switching (IPMS). IPMS can operate either with or without multicast routing. However, for multicast routing to function, IPMS must be configured.

Multicast uses Class D IP addresses in the range 224.0.0.0 to 239.255.255.255. Addresses in the range 239.0.0.0 to 239.255.255.255 are reserved for boundaries, which are used to prevent multicast traffic from being forwarded on a VLAN group or network.

IP multicast routing is a way of controlling multicast traffic across networks. The multicast router discovers which networks want to receive multicast traffic by sending out Internet Group Management Protocol (IGMP) queries and receiving IGMP reports from attached networks. The IGMP reports signal that users want to join or leave a multicast group. If there is more than one multicast router in the network, the router with the lowest IP address is elected the querier router, which is responsible for querying the subnetwork for group members.

The current release also provides support for IPv6 multicast addresses. In the IPv6 addressing scheme, multicast addresses begin with the prefix ff00::/8. Similar to IPv6 unicast addresses, IPv6 multicast addresses also have different scopes depending on their prefix, though the range of possible scopes is different.

Multicast Listener Discovery (MLD) is the protocol used by an IPv6 router to discover the nodes which request multicast packets on its directly attached links and the multicast addresses that are of interest to those neighboring nodes. MLD is derived from version 2 of IPv4's Internet Group Management Protocol, IGMPv2. MLD uses ICMPv6 message types, rather than IGMP message types.

MIB information for the multicast routing commands is as follows:

Filename:  ALCATEL-IND1-IPMRM-MIB.mib  
Module:  alcatelIND1IPMRMIB

Filename:  IPMCAST-MIB.mib  
Module:  ipMcastMIB
A summary of the available commands is listed here:

```
ip mroute-boundary
ip mroute-boundary extended
ip mroute interface ttl
ip mroute mbr
show ip mroute-boundary
show ip mroute
show ip mroute interface
show ip mroute-nexthop
show ip mroute mbr
ipv6 mroute interface ttl
show ipv6 mroute
show ipv6 mroute interface
show ipv6 mroute-nexthop
```
### ip mroute-boundary

Adds or deletes scoped multicast address boundaries for a router interface. When a user on the specified interface joins the multicast group as defined by the scoped address—plus the mask length—all multicast traffic will stop being forwarded on that interface. This provides a mechanism for the end user to control multicast traffic from the network.

Refer to the “Configuring Multicast Address Boundaries” chapter in the *OmniSwitch AOS Release 8 Advanced Routing Configuration Guide* for detailed information.

```
ip mroute-boundary if_name scoped_address mask

no ip mroute-boundary if_name scoped_address mask
```

**Syntax Definitions**

- `if_name`:
  The interface name on which the boundary is being assigned.

- `scoped_address`:
  A scoped multicast address identifying the group range for the boundary. Scoped addresses may range from 239.0.0.0–239.255.255.255.

- `mask`:
  A corresponding Class A, B, or C mask address (e.g., 255.0.0.0).

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use the `no` form of this command to delete the scoped multicast address boundaries for a router interface.

**Examples**

```
-> ip mroute-boundary vlan-2 239.0.0.0 255.0.0.0
```

**Release History**

Release 7.1.1; command was introduced.
Related Commands

show ip mroute-boundary  Displays scoped multicast address boundaries for the switch’s router interfaces.

MIB Objects

ipMcastBoundaryTable
  ipMcastBoundaryIfIndex
  ipMcastBoundaryAddressType
  ipMcastBoundaryAddress
  ipMcastBoundaryAddressPrefixLength
**ip mroute-boundary extended**

Enables or disables the multicast route boundary expansion feature. On enabling the multicast route boundary is extended to all the multicast groups (that is, the non-scoped address, 224.0.0.0 to 239.255.255.255). All multicast traffic will stop being forwarded on that interface. This provides a mechanism for the end user to control multicast traffic from the network.

Refer to the “Configuring Multicast Address Boundaries” chapter in the applicable OmniSwitch AOS Release 8 Advanced Routing Configuration Guide for detailed information.

**ip mroute-boundary extended {enable | disable}**

**Syntax Definitions**

- **enable**
  - The multicast route boundary is extended to all the multicast cast address groups (224.0.0.0 through 239.255.255.255).

- **disable**
  - The multicast route boundary is limited to administratively scoped multicast address (239.0.0.0 through 239.255.255.255).

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

</table>

**Usage Guidelines**

N/A

**Examples**

- -> ip mroute-boundary extended enable
- -> ip mroute-boundary extended disable

**Release History**

Release 8.2.1; command introduced.
Related Commands

show ip mroute-boundary  Displays multicast address boundaries for the switch’s router interfaces.

MIB Objects

alaIpmrmGlobalConfig
alaIpmrmExtendedBoundaryStatus
**ip mroute interface ttl**

Specifies a multicast datagram Time to Live (TTL) threshold for an existing router interface. IP multicast datagrams with a TTL value lower than the specified TTL threshold value will not be forwarded out of the interface.

**ip mroute interface if_name ttl threshold**

### Syntax Definitions

- **if_name**: The interface name that has one of the Multicast routing protocols running (either DVMRP or PIM).
- **threshold**: The TTL threshold value. Values may range from 0–255. The default value of 0 allows all multicast packets to be forwarded on the interface.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>threshold</td>
<td>0</td>
</tr>
</tbody>
</table>

### Platforms Supported

Usage Guidelines

- To configure the switch to operate as an MBR, first configure the DVMRP and PIM protocols for the switch then enable MBR functionality.

- The MBR functionality is operationally enabled only when there is at least one PIM interface and one DVMRP interface enabled and both interfaces are operationally active on the switch.

- The MBR feature only supports interoperability between DVMRP and PIM (includes PIM-DM and PIM-SM) domains; no other routing protocols are supported.

- The following is not supported by the MBR feature in the current release:
  - PIM-SSM
  - Interoperability between multiple PIM domains
  - IPv6 (only IPv4)

Examples

- ip mroute mbr admin-state enable
- ip mroute mbr admin-state disable

Release History

Release 7.3.2; command was introduced.
Related Commands

`show ip mroute mbr`  Displays MBR configuration information.

MIB Objects

`alaIprrmMbrStatus`
**ipv6 mroute interface ttl**

Specifies a multicast datagram Time to Live (TTL) threshold for an existing IPv6 interface. Any IP multicast datagrams with a TTL value lower than the specified TTL threshold value will not be forwarded out of the interface.

```
ipv6 mroute interface if_name ttl threshold
```

**Syntax Definitions**

- `if_name`: The name of the IPv6 interface.
- `threshold`: The TTL threshold value. Values may range from 0–255. The default value of 0 allows all multicast packets to be forwarded out of the interface.

** Defaults**

<table>

</table>

Usage Guidelines

The MBR feature only supports interoperability between DVMRP and PIM. Both of these multicast protocols must be configured and operationally active on the switch.

Examples

```
-> show ip mroute mbr
MBR Status               = enabled,
Protocols Registered     = DVMRP PIM
```

36  QoS Commands

The OmniSwitch QoS software provides a way to manipulate flows coming through the switch based on user-configured policies. The flow manipulation (generally referred to as Quality of Service or QoS) may be as simple as allowing/denying traffic, or as complicated as remapping 802.1p bits from a Layer 2 network to ToS values in a Layer 3 network.

This chapter provides information about configuring QoS global and port parameters through the Command Line Interface (CLI). Refer to Chapter 44, “QoS Policy Commands,” for information about commands used to configure QoS policy rules.

MIB information for the QoS commands is as follows:

<table>
<thead>
<tr>
<th>Filename</th>
<th>Module</th>
</tr>
</thead>
<tbody>
<tr>
<td>ALCATEL-IND1-QOS-MIB.mib</td>
<td>alaQoSMIB</td>
</tr>
<tr>
<td>ALCATEL-IND1-VIRTUAL-FLOW-CONTROL-MIB.mib</td>
<td>alcatelIND1VfcMIB</td>
</tr>
</tbody>
</table>

Some of the commands listed here are not currently supported on one or more platforms. See command descriptions in this chapter and check release notes for information about commands that are not supported.

The QoS commands are listed here:

<table>

**qos**

Enables or disables QoS. This section describes the base command with a single required option (enable or disable).

In lieu of this option, the base command (qos) may be used with other keywords to set up global QoS configuration. These keywords are listed here and described as separate commands later in this chapter. In addition, some keywords have a no form to remove the parameter or return it to its default.

```
qos {enable | disable}
  [trust-ports]
  [forward log]
  [log console]
  [log lines lines]
  [log level level]
  [stats interval seconds]
  [phones [priority priority_value | trusted]]
  [user-port {filter | shutdown} {spoof | bgp | bpdu | rip | ospf | vrrp | dvmrp | pim | isis | dhcp-server | dns-reply}]
```

---

### Syntax Definitions

**enable**

Enables QoS. The QoS software in the switch classifies flows coming into the switch to attempt to match them to QoS policies. If a match is found, the policy parameters are applied to the flow. The enable setting may be used alone or in conjunction with optional command keywords.

**disable**

Disables QoS. Flows coming into the switch are not matched to policies. The disable setting cannot be used with any other command keyword.

---

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

---

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|       | 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900 | 6900 | 6900 | 6900 | 6900 | 9900 |
|-------|------|------|------|-------|------|-------|------|------|------|------|------|------|------|------|------|------|
|       | Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes  | Yes  | Yes  | Yes  | Yes  | Yes  | Yes  |

---

OmniSwitch AOS Release 8 CLI Reference Guide   April 2023   page 36-3
**Usage Guidelines**

- When QoS is disabled, flows coming into the switch are classified but not matched to a policy. Traffic is treated as best effort and assigned to default queues.

- The command keywords may be used with or without `enable`; these keywords cannot be used with `disable`.

**Examples**

```
-> qos disable
-> qos enable
```

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

<table>
<thead>

</tbody>
</table>

**MIB Objects**

alaQoSConfigTable
  - alaQoSConfigEnable
  - alaQoSConfigTrustedPorts
  - alaQoSConfigForwardLog
  - alaQoSConfigLogLines
  - alaQoSConfigLogLevel
  - alaQoSConfigLogConsole
  - alaQoSConfigStatsInterval
  - alaQoSConfigAutoPhones
  - alaQoSConfigUserportFilter
  - alaQoSConfigAppliedUserportFilter
  - alaQoSConfigUserportShutdown
  - alaQoSConfigAppliedUserportShutdown
qos trust-ports

Configures the global trust mode for QoS ports. Trusted ports can accept 802.1p and ToS/DSCP values in incoming packets; untrusted ports will set any 802.1p or ToS/DSCP values to zero in incoming packets, unless a default 802.1p or ToS/DSCP value is configured.

Any port configured through the qos port command will automatically be added in the trust mode specified by this command. See page 36-41 for more information about this command.

qos trust-ports
qos no trust-ports

Syntax Definitions

N/A

Defaults

By default, all ports are untrusted.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the qos ports trusted command to override the default for a particular port.
- The setting only applies to ports with incoming traffic.
- Mobile ports are always trusted regardless of the global setting.
- Use the qos port default 802.1p or qos port default dscp commands to specify that a value other than zero should be applied to the incoming packets. Note that this value is overridden if a policy exists that specifies a different value for such packets.

Examples

-> qos trust-ports
-> qos no trust-ports

Release History

Release 7.1.1; command was introduced.
**Related Commands**

- **qos port**
  Configures a physical port for QoS.
- **qos port trusted**
  Configures whether or not a particular port is trusted or untrusted.
- **show qos port**
  Displays information about QoS ports.

**MIB Objects**

- **alaQoSConfigTable**
- **alaQoSConfigTrustedPorts**
qos forward log

Enables the QoS software in the switch to send events to the policy server software in the switch in real time. The policy server software may then be polled by an NMS application for logged events.

qos forward log
qos no forward log

Syntax Definitions

N/A

Defaults

By default, logged events are not sent to the policy server software in the switch.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platforms</th>
<th>Support</th>
</tr>
</thead>
<tbody>
<tr>
<td>6360</td>
<td>Yes</td>
</tr>
<tr>
<td>6465</td>
<td>Yes</td>
</tr>
<tr>
<td>6560</td>
<td>Yes</td>
</tr>
<tr>
<td>6570M</td>
<td>Yes</td>
</tr>
<tr>
<td>6860</td>
<td>Yes</td>
</tr>
<tr>
<td>6860N</td>
<td>Yes</td>
</tr>
<tr>
<td>6865</td>
<td>Yes</td>
</tr>
<tr>
<td>6900</td>
<td>Yes</td>
</tr>
<tr>
<td>6900 V72/C32</td>
<td>Yes</td>
</tr>
<tr>
<td>6900 X48C6/T48C6/X48C8/C32E/T24C2/X24C2</td>
<td>Yes</td>
</tr>
<tr>
<td>9900</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

An NMS application may query the Policy Manager in the switch for logged events. Use the qos forward log command to forward each event as it happens.

Examples

--> qos forward log

Release History

Release 7.1.1; command was introduced.

Related Commands

qos log lines Configures the number of lines in the QoS log.
show qos log Displays the log of QoS events.

MIB Objects

alaQoSConfigTable
alaQoSConfigForwardLog
**qos log console**

Sends QoS log messages to the switch logging utility, which is an event logging application available on the OmniSwitch. The configuration of the switch logging utility determines if QoS messages are sent to a log file in the switch’s flash file system, displayed on the switch console, or sent to a remote syslog server.

```qos log console
qos no log console```

### Syntax Definitions

N/A

### Defaults

QoS log messages are not sent to the switch logging utility by default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- To display QoS log events as they happen on an output console attached to the switch, configure the switch logging utility to output events to the console. This is done using the `swlog output` command.

- The entire log may be viewed at any time using the `show qos log` command.

### Examples

- `-> qos log console`
- `-> qos no log console`

### Release History

Release 7.1.1; command was introduced.
**Related Commands**

- **qos log lines**
  Configures the number of lines in the QoS log.

- **swlog output**
  Enables or disables switch logging output to the console, file, or data socket (remote session).

- **show qos log**
  Displays the log of QoS events.

**MIB Objects**

- **alaQoSConfigTable**
  - **alaQoSConfigLogConsole**
qos log lines

Configures the number of lines in the QoS log.

qos log lines lines

Syntax Definitions

lines The number of lines included in the QoS log. A value of zero turns off logging to the console. The range is 0–10240.

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>lines</td>
<td>10240</td>
</tr>
</tbody>
</table>

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- To turn off logging, enter 0 for the number of log lines. (Note that error messages will still be logged.)
- If you change the number of log lines, you may clear all messages in the QoS log. To avoid clearing all messages in the log, enter the qos log lines command in the boot.cfg file. The log length will be changed at the next reboot.

Examples

- > qos log lines 5
- > qos log lines 0

Release History

Release 7.1.1; command was introduced.
Related Commands

show qos log

Displays the log of QoS events.

MIB Objects

alaQoSConfigTable

alaQoSConfigLogLines
qos log level

Configures the level of log detail.

qos log level level

qos no log level

Syntax Definitions

level The level of log detail, ranging from 1 (least detail) to 8 (most detail).

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>level</td>
<td>5</td>
</tr>
</tbody>
</table>

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the debug qos command to change the type of debugging messages that are logged. The qos log level command configures the level of detail for these messages.

- If the debug qos command is not configured to log any kind of information (this is the default), the qos log level command has no effect.

- Note that a high log level value will impact the performance of the switch.

Examples

-> qos log level 4
-> qos log level 0

Release History

Release 7.1.1; command was introduced.
Related Commands

- `qos log lines`  Configure the number of lines in the QoS log.
- `show qos log`    Displays the log of QoS events.

MIB Objects

- `alaQoSConfigTable`  
  - `alaQoSConfigLogLevel`
**qos stats interval**

Configures how often the switch polls network interfaces for statistics about QoS events.

```plaintext
qos stats interval seconds
```

**Syntax Definitions**

`seconds` The number of seconds before the switch polls network interfaces for statistics. The range is 1–3600.

**Defaults**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>60</td>
</tr>
</tbody>
</table>

**Platforms Supported**

Not supported in this release.

**Usage Guidelines**

- Change the statistics interval to a smaller interval if you want to monitor QoS events.
- Change the statistics interval to a larger interval if you want to free some switch memory.

**Examples**

```plaintext
-> qos stats interval 30
```

**Release History**

Release 7.1.1; command was introduced.
Release 8.5R4; command deprecated, interval set to 5 seconds.

**Related Commands**

- `show qos statistics` Displays statistics about the QoS configuration.

**MIB Objects**

- `alaQoSCfgTable`  
  - `alaQoSCfgStatsInterval`
**qos phones**

Enables or disables the automatic prioritization of IP phone traffic.

```
qos phones [priority priority_value | trusted]
qos no phones
```

---

**Syntax Definitions**

- `priority_value`: The priority given to scheduling traffic on the output port. Values range from 0 (lowest) to 7 (highest).
- `trusted`: Trusts IP phone traffic; priority value of the IP phone packet is used.

---

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>priority_value</code></td>
<td>trusted</td>
</tr>
</tbody>
</table>

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Support</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- Use the `no` form of this command to disable automatic prioritization of IP phone traffic.

- IP phone traffic is identified by examining the source MAC address of the packet received on the port. If the source MAC falls within one of the following ranges, the QoS IP phone priority is automatically assigned to the MAC:

<table>
<thead>
<tr>
<th>MAC Address Range</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>00:80:9f:00:00:00—00:80:9f:ff:ff:ff</td>
<td>Enterprise IP Phones Range</td>
</tr>
<tr>
<td>78:81:02:00:00:00—78:81:02:ff:ff:ff</td>
<td>Communications IP Phones Range</td>
</tr>
<tr>
<td>00:13:fa:00:00:00—00:13:fa:ff:ff:ff</td>
<td>Lifesize IP Phones Range</td>
</tr>
<tr>
<td>48:7a:55:00:00:00—48:7a:55:ff:ff:ff</td>
<td>ALE 8008 IP Phone MAC Range</td>
</tr>
</tbody>
</table>

- To automatically apply the QoS IP phone priority to other, non-IP phone traffic, add the source MAC addresses of such traffic to the QoS “alaPhones” group.

- When automatic prioritization of IP phone traffic is enabled, QoS policies that specify priority are not applied to the IP phone traffic. Other QoS policies, however, are applied to this type of traffic as usual.
On the OmniSwitch 6860, consider the following:

- When automatic prioritization of QoS IP phone traffic is enabled, a rule is configured in the FFP (Fast Filtering Processor) with the source MAC address as 00:80:9F:00:00:00 and the mask FF:FF:FF:00:00:00 and 00-13-FA-xx-xx-xx and mask FF:FF:FF:00:00:00.

- The QoS IP phone prioritization and SIP Snooping features are mutually exclusive. If one of these features is enabled when an attempt is made to enable the other feature, an error message is displayed. To enable QoS IP phone prioritization, first use the `sip-snooping admin-state disable` command to disable SIP Snooping. To enable the SIP Snooping feature, first use the `qos no phones` command to disable QoS IP phone prioritization.

**Note.** QoS IP phone prioritization is configured, by default, on initialization.

### Examples

- `qos phones priority 7`
- `qos phones trusted`
- `qos no phones`

### Release History

Release 7.1.1; command was introduced.
Release 8.5R2; additional IP phone MAC ranges added.

### Related Commands

- `show qos config`
  Displays the QoS configuration for the switch.

### MIB Objects

- `alaQoSConfigTable`
- `alaQoSConfigAutoPhones`
**qos quarantine mac-group**

Configures the name of the Quarantine MAC address group. The OmniVista Quarantine Manager application identifies source MAC addresses to quarantine and adds these addresses to the Quarantine MAC group.

**qos quarantine mac-group** *mac_group*

**qos no quarantine mac-group**

---

**Syntax Definitions**

*mac_group* The name of the Quarantine MAC group (up to 31 alphanumeric characters).

---

**Defaults**

By default, the quarantine MAC group is not configured on the switch.

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>Support</th>
</tr>
</thead>
<tbody>
<tr>
<td>6360</td>
<td>No</td>
</tr>
<tr>
<td>6465</td>
<td>No</td>
</tr>
<tr>
<td>6560</td>
<td>No</td>
</tr>
<tr>
<td>6570M</td>
<td>No</td>
</tr>
<tr>
<td>6860</td>
<td>Yes</td>
</tr>
<tr>
<td>6860N</td>
<td>No</td>
</tr>
<tr>
<td>6865</td>
<td>Yes</td>
</tr>
<tr>
<td>6900</td>
<td>No</td>
</tr>
<tr>
<td>6900 V72/C32</td>
<td>No</td>
</tr>
<tr>
<td>6900 X48C6/T48C6/</td>
<td>No</td>
</tr>
<tr>
<td>6900 X48C4E/V48C8/C32E/T24C2/</td>
<td>No</td>
</tr>
<tr>
<td>9900</td>
<td>No</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- Use the *no* form of the command to reset the default MAC group name back to “Quarantined”.
- The *mac_group* name specified with this command must match the group name specified with the OmniVista Quarantine Manager application.
- Each switch can have a different Quarantine MAC group name as long as each switch matches the OmniVista Quarantine Manager MAC group name for that switch. Note that there is only one such MAC group per switch.
- Do not use the Quarantine MAC group name in regular QoS policies.
- This group is also used by the switch Quarantine Manager and Remediation (QMR) application to restrict or restore network access to quarantined MACs.
- Note that QMR is not available if VLAN Stacking services or QoS VLAN Stacking inner VLAN and 802.1p policies are configured on the switch.
- QMR is considered active when there are MAC addresses in the Quarantine MAC address group. Use the *show quarantine mac group* command to display the contents of this group. In addition, the *show mac-learning* command output display identifies quarantined MAC addresses.
Examples

-> qos quarantine mac-group mac_group1
-> no quarantine mac-group

Release History

Release 8.1.1; command was introduced.

<tr>
<td>filter</td>
<td>Filters the specified type of traffic when it is received on UserPorts ports.</td>
</tr>
<tr>
<td>shutdown</td>
<td>Administratively disables UserPorts ports that receive the specified type of traffic.</td>
</tr>
<tr>
<td>spoof</td>
<td>Detects IP spoofing. The source IP address of a packet ingressing on a user port is compared to the subnet of the VLAN/service for the user port; the packet is dropped if these two items do not match. This parameter is not supported on the OmniSwitch 6360 and OmniSwitch 6465.</td>
</tr>
<tr>
<td>bgp</td>
<td>Filters only BGP protocol packets from a TCP session that was not originated by the same switch that has this filter configured.</td>
</tr>
<tr>
<td>bpdu</td>
<td>Filters conventional Spanning Tree BPDU (destination MAC address 0x0180c2:000000) packets and GVRP (destination MAC address 0x0180c2:000021) packets.</td>
</tr>
<tr>
<td>rip</td>
<td>Filters RIP protocol packets.</td>
</tr>
<tr>
<td>ospf</td>
<td>Filters OSPF protocol packets.</td>
</tr>
<tr>
<td>vrrp</td>
<td>Filters VRRP protocol packets.</td>
</tr>
<tr>
<td>dvmrp</td>
<td>Filters IGMP packets with a type of 0x13. This applies only to IP packets with no options.</td>
</tr>
<tr>
<td>pim</td>
<td>Filters PIMv1, PIM-DM, and PIM-SM packets. The PIMv1 filter applies only to IP packets with no options.</td>
</tr>
<tr>
<td>isis</td>
<td>Filters IS-IS protocol packets.</td>
</tr>
<tr>
<td>dhcp-server</td>
<td>Filters response packets originating from a DHCP or BOOTP server that is configured on the known UDP port 67.</td>
</tr>
<tr>
<td>dns-reply</td>
<td>Filters all packets (both TCP and UDP) that originate from the known DNS port 53.</td>
</tr>
</tbody>
</table>

Defaults

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>filter</td>
<td>spoof</td>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the **no** form of this command to disable the filter or shutdown function. This form of the command effects the overall operation of the feature.

- To specify more than one traffic type in the same command line, enter each type separated by a space (e.g., `spoof bgp ospf`).

- The **filter** option is applied only to ingress traffic on ports that are members of the UserPorts group. However, the switch will still process the filtered packets to determine if an egress update is sent on the same port. For example, if RIP traffic is filtered, the switch will still send RIP peer updates on that port.

- Note that existing traffic types to filter or shutdown are removed each time the **filter** or **shutdown** option is configured. Specify all desired traffic types each time the **qos user-port** command is performed to retain previously configured traffic types.

- No changes to the **filtering** and **shutdown** options are applied to the switch until the **qos apply** command is performed.

- This command only applies to ports that are members of the UserPorts group. Use the **policy port group** command to create and assign members to the UserPorts group.

- An SNMP trap is sent when a port is administratively disabled through a UserPorts shutdown function or a port disable action.

- To enable a port disabled by a user port shutdown operation, use the **interfaces admin** command to administratively enable the port or disconnect and reconnect the port cable.

- Up to a fixed number of IP interfaces are supported with spoof detection on user ports. If the number of interfaces exceeds this number, user port packets ingressing on those interfaces are dropped.

- To enforce anti-spoofing, a VLAN/service must have an IP address associated with it. If there is no IP address associated with the VLAN/service, no packets will be dropped.

- Anti-spoofing on service is supported only on SPB SAP ports and is supported on OmniSwitch 6860N, and OmniSwitch 6900 X48C6/T48C6/X48C4E/V48C8/C32E/T24C2/X24C2 where inline routing is supported.

Examples

- `-> qos user-port filter spoof bpdu`
- `-> qos user-port shutdown spoof bgp ospf`
- `-> qos no user-port shutdown`
**QoS Commands qos user-port**

**Release History**
Release 7.1.1; command was introduced.

**Related Commands**
- `policy port group` Configures a port group and its associated slot and port numbers.
- `show qos config` Displays QoS configuration information.

**MIB Objects**
- `alaQoSConfigTable`
- `alaQoSConfigUserportFilter`
- `alaQoSConfigAppliedUserportFilter`
- `alaQoSConfigUserportShutdown`
- `alaQoSConfigAppliedUserportShutdown`
**qos dei**

Configures the global Drop Eligible Indicator (DEI) bit mapping and marking setting for all QoS ports. The DEI setting applies to packets marked yellow (non-conforming) as the result of Tri-Color Marking (TCM) or other rate limiting mechanisms.

`qos dei {ingress | egress}`

`qos no dei {ingress | egress}`

**Syntax Definitions**

- **ingress**: Maps the DEI/CFI bit to yellow (non-conforming) if this bit is set for ingress traffic. *DEI mapping is not supported on the OmniSwitch 6465.*
- **egress**: Marks the DEI/CFI bit for egress packets if the packets were marked yellow as a result of the rate limiting process.

**Defaults**

By default, no DEI bit marking or mapping is done.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to disable the global DEI bit mapping (ingress) or marking (egress) configuration for the switch.
- Use the `qos port dei` command to set the DEI bit mapping and marking configuration for a specific port. Note that the port setting takes precedence over the global DEI setting.
- Packets marked yellow by rate limiting are still transmitted when there is no congestion on the egress port queues. Setting the DEI bit for yellow egress packets (qos dei egress) ensures that an upstream switch is made aware that the packet was marked yellow.
- When a switch receives a yellow packet with the DEI bit set and ingress DEI bit mapping is enabled (qos dei ingress), the packet is mapped to an internal drop precedence or yellow color marking for the switch.
- DEI bit mapping is not supported on the OmniSwitch 6465. As a result, packets are processed as follows on that switch:
  - When packets are received on a trusted port, the DEI bit is retained only if the packets were not subject to a meter. If the port is untrusted, however, the DEI bit is always reset.
  - When a meter is set and DEI egress is configured on a trusted port, the DEI bit is reset to 0 for green
packets. Yellow–red packets egress with the DEI bit set to 1.

**Examples**

- `qos dei ingress`
- `qos dei egress`
- `qos no dei ingress`
- `qos no dei egress`

**Release History**

Release 7.2.1; command was introduced.

**Related Commands**

- `qos port` Configures a physical port for QoS.
- `qos port dei` Configures the Drop Eligible Indicator (DEI) bit mapping and marking setting for the specified QoS port.
- `policy action cir` Configures a Tri-Color Marking policy action.
- `show qos config` Displays global information about the QoS configuration.
- `show qos port` Displays information about QoS ports.

**MIB Objects**

- `alaQoSConfigTable`
  - `alaQoSConfigDEIMapping`
  - `alaQoSConfigDEIMarking`
**debug qos**

Configures the type of QoS events that will be displayed in the QoS log.

```
debug qos [info] [config] [rule] [main] [port] [msg] [sl] [ioctl] [mem] [mapper] [slot] [l2] [l3] [classifier] [nat] [sem] [pm] [ingress] [egress]
```

```
debug no qos
```

```
debug no qos [info] [config] [rule] [main] [port] [msg] [sl] [ioctl] [mem] [mapper] [slot] [l2] [l3] [classifier] [nat] [sem] [pm] [ingress] [egress]
```

---

**Syntax Definitions**

- **info**: Logs basic information about the switch.
- **config**: Logs information about the global configuration.
- **rule**: Logs events for rules configured on the switch.
- **main**: Logs information about basic program interfaces.
- **port**: Logs events related to QoS ports.
- **msg**: Logs QoS messages.
- **sl**: Logs information about source learning.
- **mem**: Logs information about memory.
- **mapper**: Logs information about mapping queues.
- **slot**: Logs events related to slots.
- **l2**: Logs Layer 2 QoS events on the switch.
- **l3**: Logs Layer 3 QoS events on the switch.
- **classifier**: Logs information whenever the switch classifies a flow; more details are provided if the log level is higher.
- **nat**: Not supported in this release.
- **sem**: Logs information about semaphore, process locking.
- **pm**: Logs events related to the Policy Manager.
- **ingress**: Logs information about packets arriving on the switch.
- **egress**: Logs information about packets leaving the switch.

**Defaults**

By default basic information messages are logged (**info**). Error messages are always logged.
Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the no form of this command to change the type of messages that will be logged or to return debugging to its default state.
- Use this command to troubleshoot QoS events on the switch.

Examples

-> debug qos flows queue
-> qos debug no flows no queue
-> debug no qos

Release History

Release 7.1.1; command was introduced.

Related Commands

- **qos forward log** Enables the switch to send events to the PolicyView application in real time.
- **qos log lines** Configures the number of lines in the QoS log.
- **qos log level** Configures the level of log detail.
- **show qos log** Displays the log of QoS events.

MIB Objects

- **alaQoSConfigTable**
  - **alaQoSConfigDebug**
**debug qos internal**

Displays debugging information for QoS internal to the switch.

```
debug qos internal [slot/slice] [flow] [queue] [port] [l2tree] [l3tree] [vector] [pending] [verbose] [mapper] [pool] [log] [pingonly | nopingonly]
```

### Syntax Definitions

- **slot/slice**
  The slot number and slice to view debugging information. A *slice* is a logical section of hardware that corresponds to particular ports on a network interface module.

- **flow**
  Displays information about QoS flows.

- **queue**
  Displays information about QoS queues.

- **port**
  Displays information about QoS ports.

- **l2tree**
  Displays information about Layer 2 flows.

- **l3tree**
  Displays information about Layer 3 flows.

- **vector**
  Displays information about vectors.

- **pending**
  Displays information about pending QoS objects.

- **verbose**
  Sets the output to verbose mode for more detailed information.

- **mapper**
  Displays information about QoS mapping flows to queues.

- **pool**
  Displays information about the buffer pool.

- **log**
  Displays information about QoS information that is logged.

- **pingonly**
  Specifies that any policies configured with an ICMP protocol condition apply only to ICMP echo-requests and echo-replies.

- **nopingonly**
  Configures the switch so that any policies configured with an ICMP protocol condition apply to any ICMP packets.

### Defaults

Debugging is disabled by default.

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>pingonly</td>
<td>nopingonly</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

```
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>
```
Usage Guidelines

- Use the `debug qos` command to configure the type of QoS events that will be displayed in the QoS log.
- Use the `qos log level` command to set the level of log detail in the QoS log.

Examples

`-> debug qos internal "verbose log"

Release History

Release 7.1.1; command was introduced.

Related Commands

- `debug qos` — Configures the type of QoS events that will be displayed in the QoS log.
- `qos log level` — Configures the level of log detail.

MIB Objects

N/A
**clear qos log**

Clears messages in the current QoS log.

**clear qos log**

---

**Syntax Definitions**

N/A

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

This command is useful for clearing messages from a large log file so that the file is easier to view. Logs can get large if invalid rules are configured on the switch, or if a lot of QoS events have taken place. Clearing the log makes the file easier to manage.

**Examples**

`-> clear qos log`

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `qos log lines` Configures the number of lines in the QoS log.
- `show qos log` Displays the log of QoS events.

**MIB Objects**

- `alaQoSConfigTable`  
  - `alaQoSConfigClearLog`
### qos apply

Applies configured global QoS and policy settings to the current configuration (changes will be active and stored in flash).

**qos apply**

---

**Syntax Definitions**

N/A

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- This command is required to activate all QoS and policy commands. This is the only command that causes current changes to be written to flash.

- Rules are configured through the **policy rule** command, but are not active on the switch until you enter **qos apply**.

**Examples**

```bash
-> qos apply
```

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- **qos revert**: Removes any policies configured through policy rule but not applied to the current configuration through the **qos apply** command.
- **qos reset**: Resets the QoS configuration to its default values.
- **qos flush**: Deletes all pending policy information.
### MIB Objects

<table>
<thead>
<tr>
<th>alaQoSConfigTable</th>
</tr>
</thead>
<tbody>
<tr>
<td>alaQoSConfigApply</td>
</tr>
</tbody>
</table>
**qos revert**

Deletes any QoS configuration that has not been applied to the configuration through the `qos apply` command.

```
qos revert
```

**Syntax Definitions**

N/A

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use this command to remove currently configured policies that have not yet been activated through the `qos apply` command.

**Examples**

```
-> qos revert
```

**Release History**

Release 7.1.1; command was introduced.
**Related Commands**

- **policy rule**
  Configures a policy rule and saves it to the current configuration but does not make it active on the switch.

- **qos apply**
  Applies all QoS settings configured on the switch to the current configuration.

- **qos reset**
  Resets the QoS configuration to its defaults.

**MIB Objects**

- **alaQoSConfigTable**
  - **alaQoSConfigRevert**
**qos flush**

Deletes all pending policy information. This command is different from **qos revert**, which returns the pending policy configuration to its last applied settings.

**Syntax Definitions**

N/A

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6</th>
<th>X48C4E/V48C8/C32E/T24C2</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- If you enter this command, the pending policy configuration is completely erased. If you then enter **qos apply**, the erased configuration overwrites the applied policies and you will erase all of your policy configuration.

Do not use this command unless you want to erase all of your policy configuration and start configuring new policies.

- Use the **qos revert** command to return the pending policy configuration to its last applied value.

- Policy configuration includes the following commands:

```
<table>
<thead>
<tr>
<th>base commands</th>
</tr>
</thead>
<tbody>
<tr>
<td>policy rule</td>
</tr>
<tr>
<td>policy network group</td>
</tr>
<tr>
<td>policy service</td>
</tr>
<tr>
<td>policy service group</td>
</tr>
<tr>
<td>policy mac group</td>
</tr>
<tr>
<td>policy port group</td>
</tr>
<tr>
<td>policy condition</td>
</tr>
<tr>
<td>policy action</td>
</tr>
</tbody>
</table>
```

**Examples**

-> qos flush

**Release History**

Release 7.1.1; command was introduced.
Related Commands

**qos revert**
Deletes any QoS configuration that has not been applied to the configuration through the `qos apply` command.

**qos apply**
Applies configured global QoS and policy settings to the current configuration (changes will be active and stored in flash).

**policy server flush**
Removes all cached LDAP policy data from the switch.

MIB Objects

alaQoSConfigTable
alaQoSConfigFlush
**qos reset**

Resets the QoS configuration to its defaults.

```
qos reset
```

---

### Syntax Definitions

N/A

---

### Defaults

N/A

---

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>Support</th>
</tr>
</thead>
<tbody>
<tr>
<td>6360</td>
<td>Yes</td>
</tr>
<tr>
<td>6465</td>
<td>Yes</td>
</tr>
<tr>
<td>6560</td>
<td>Yes</td>

<tr>
<td>6570M</td>
<td>Yes</td>
</tr>
<tr>
<td>6860</td>
<td>Yes</td>
</tr>
<tr>
<td>6860N</td>
<td>Yes</td>
</tr>
<tr>
<td>6865</td>
<td>Yes</td>
</tr>
<tr>
<td>6900 V72/C32</td>
<td>Yes</td>
</tr>
<tr>
<td>6900</td>
<td>Yes</td>
</tr>
<tr>
<td>9900</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

### Usage Guidelines

Use this command to reset QoS configuration that has not yet been applied through the `qos apply` command. The parameters are reset to their defaults.

---

### Examples

```
-> qos reset
```

---

### Release History

Release 7.1.1; command was introduced.

---

### Related Commands

- **qos apply**
  - Applies all QoS settings configured on the switch to the current configuration.

- **qos revert**
  - Deletes any QoS configuration that has not been applied to the configuration through the `qos apply` command.

---

### MIB Objects

- `alaQoSConfigTable`
- `alaQoSConfigReset`
**qos stats reset**

Resets QoS statistic counters to zero.

**Syntax Definitions**

N/A

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use this command to reset global QoS statistics to zero. Statistics may be displayed with the `show qos statistics` command.

**Examples**

-> qos stats reset

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `show qos statistics` Displays statistics about the QoS configuration.

**MIB Objects**

- `alaQoSConfigTable`  
  - `alaQoSConfigStatsReset`
qos switch-group

Changes how the switch handles IP addresses configured on the switch to help reduce the number of hardware entries required for QoS policies that use an IP address configured on the switch.

qos switch-group {expanded | compact}

Syntax Definitions

expanded
Uses the expanded method for populating the hardware routing table. This method requires a hardware entry for each individual IP interface belonging to either the built-in 'Switch' or 'Switch6' network groups.

compact
Uses the compact method for populating the hardware routing table by programming a single next hop entry for all IP interfaces belonging to either the built-in 'Switch' or 'Switch6' network groups.

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>expanded</td>
<td>compact</td>
</tr>
</tbody>
</table>

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

Usage Guidelines

- The expanded method can be used to reduce the hardware entries required and allow for a single hardware entry to be programmed for all the IP interfaces belonging to either the built-in 'Switch' or 'Switch6' network groups instead of a hardware entry for each individual IP address.
- The built-in policy network group 'Switch' contains all the IPv4 interfaces configured on the switch.
- The built-in policy network group 'Switch6' contains all the IPv6 interfaces configured on the switch.
- It is required to reboot the switch for the switch group setting to take effect. The current setting will always be shown, with the modified setting in parentheses in the show qos config command.

Examples

-> qos switch-group compact
-> qos switch-group expanded
**Release History**

Release 8.4.1 R02; command introduced.

**Related Commands**

- `show qos config` Displays global information about the QoS configuration.

**MIB Objects**

- `alaQoSConfig`
- `alaQoSConfigSwitchGroup`
qos port reset

Resets all QoS port configuration to the default values.

qos port chassis/slot/port[-port2] reset

Syntax Definitions

chassis The chassis identifier.
slot/port[-port2] A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>
| Usage Guidelines

The QoS port configuration parameters that are reset include:

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>default queues</td>
<td>8</td>
</tr>
<tr>
<td>trusted</td>
<td>not trusted</td>
</tr>
</tbody>
</table>

Examples

-> qos port 3/1 reset

Release History

Release 7.1.1; command was introduced.

Related Commands

show qos port Displays information about QoS ports.
**MIB Objects**

alaQoSPortTable
alaQoSPortSlot
alaQoSPortPort
alaQoSPortReset
**qos port**

Configures QoS parameters for a physical port. This section describes the base command with a single required option (slot/port).

In lieu of these options, the base command (qos port) may be used with other keywords to set up a QoS configuration on a per port basis. These keywords are listed here and described as separate commands later in this chapter. In addition, some keywords have a **no** form to remove the parameter or return it to its default.

```
qos port chassis/slot/port[-port2]
    [trusted]
    [maximum egress-bandwidth bps]
    [maximum ingress-bandwidth bps]
    [maximum {ingress | egress}-depth bytes]
    [default 802.1p value]
    [default dscp value]
    [default classification {802.1p | tos | dscp}]
```

**Syntax Definitions**

- **chassis**
  - The chassis identifier.

- **slot/port[-port2]**
  - A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).

**Defaults**

- All ports are untrusted.
- By default, QoS ports do not preempt queues of lower priority.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>

<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use the **trusted** option to change the trust mode for the port.

**Examples**

```
-> qos port 1/3/1 trusted
-> qos port 1/4/2 no trusted
```
**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- **qos apply**  
  Applies configured QoS and policy settings to the current configuration.

- **qos port trusted**  
  Configures whether the default mode for QoS ports is trusted or untrusted.

- **show qos port**  
  Displays information about QoS ports.

**MIB Objects**

- `alaQoSPortTable`
  - `alaQoSPortSlot`
  - `alaQoSPortPort`
  - `alaQoSPortTrusted`
  - `alaQoSPortMaximumBandwidth`
  - `alaQoSPortMaximumBandwidthStatus`
  - `alaQoSPortMaximumIngBandwidth`
  - `alaQoSPortMaximumIngBandwidthStatus`
  - `alaQoSPortMaximumDefaultDepth`
  - `alaQoSPortMaximumDefaultDepthStatus`
  - `alaQoSPortDefault8021p`
  - `alaQoSPortDefaultDSCP`
  - `alaQoSPortDefaultClassification`
qos port trusted

Configures whether an individual port is trusted or untrusted. Trusted ports can accept the 802.1p and ToS/DSCP values in incoming packets; untrusted ports will set any 802.1p or ToS/DSCP values to zero in incoming packets, unless a default 802.1p or ToS/DSCP value is configured.

```plaintext
qos port chassis/slot/port[-port2] trusted
qos port chassis/slot/port no trusted
```

### Syntax Definitions

chassis
The chassis identifier.

slot/port[-port2]
A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).

### Defaults

By default, all ports are untrusted.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `qos trust-ports` command to set the default trust mode for all QoS ports. The `qos port trusted` command may be used to override the default.
- The setting applies only to ports with incoming traffic.
- Use the `qos port default 802.1p` or `qos port default dscp` commands to specify that a value other than zero should be applied to the incoming packets. Note that this value is overridden if a policy exists that specifies a different 802.1p or ToS/DSCP value for such packets.

### Examples

```
-> qos port 1/3/1 trusted
-> qos port 1/4/2 no trusted
```

### Release History

Release 7.1.1; command was introduced.
**Related Commands**

- **qos apply**
  Applies configured QoS and policy settings to the current configuration.
- **qos port**
  Configures a physical port for QoS.
- **qos trust-ports**
  Configures the global trust mode for QoS ports.
- **show qos port**
  Displays information about QoS ports.

**MIB Objects**

- **alaQoSPortTable**
  - **alaQoSPortTrusted**
**qos port maximum egress-bandwidth**

Configures the maximum rate at which the traffic is sent on the specified QoS port.

```
qos port chassis/slot/port[-port2] maximum egress-bandwidth bps [k | m | g | t]
qos port chassis/slot/port[-port2] no maximum egress-bandwidth
```

**Syntax Definitions**

- `chassis` - The chassis identifier.
- `slot/port[-port2]` - A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).
- `bps[k | m | g | t]` - The maximum amount of bandwidth, in bits-per-second, for all traffic that egresses on the port. The value may be entered as an integer (for example, 10) or with abbreviated units (for example, 10k, 5m, 1g, 1t).

**Defaults**

By default, the maximum bandwidth is the maximum allowed for the interface type on which the port resides.

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>k</td>
<td>m</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove a configured maximum egress bandwidth value from a port.
- If the maximum egress bandwidth value is specified as an integer, without an abbreviated unit designation, the value is applied in kbps by default. For example, if the number 10 is specified, 10K is the maximum bandwidth value used. However, if 10G is specified, the maximum bandwidth value applied is 10 gbps.
- The maximum egress bandwidth value cannot exceed the maximum bandwidth of the interface type associated with the port.
- Modifying the maximum egress bandwidth is most useful for low-bandwidth links.
Examples

- `qos port 3/1 maximum egress-bandwidth 10`
- `qos port 4/1-8 maximum egress-bandwidth 10g`
- `qos port 3/1 no maximum egress-bandwidth`
- `qos port 4/1-8 no maximum egress-bandwidth`

Release History

Release 7.1.1; command was introduced.

alaQoSPortSlot
alaQoSPortPort
alaQoSPortMaximumIngBandwidth
alaQoSPortMaximumIngBandwidthStatus
**qos port maximum depth**

Configures the maximum queue depth or bucket size assigned to this action, in bytes, used for traffic metering. The queue depth or bucket size determines the amount of buffer allocated to each queue. When the queue depth or bucket size is reached, the switch starts dropping packets.

```
qos port chassis/slot/port[-port2] maximum {ingress | egress}-depth bytes [k | m | g | t]
qos port chassis/slot/port[-port2] no maximum {ingress | egress}-depth
```

**Syntax Definitions**

- **chassis**
  The chassis identifier.

- **slot/port[-port2]**
  A physical slot and port number. Use a hyphen to specify a range of ports.

- **bytes[k | m | g | t]**
  The maximum bucket size, in bytes. The value may be entered as an integer (for example, 10) or with abbreviated units (for example, 10k, 5m).

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>k</td>
<td>m</td>
</tr>
<tr>
<td>bytes</td>
<td>0</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- This QoS port parameter is configured in conjunction with the maximum bandwidth parameters. When the bucket size is reached, the switch starts to drop packets.

- Use the `no` form of the command to remove the maximum depth setting from a port.

- If the maximum depth value is specified as an integer, without an abbreviated unit designation, the value is applied in Kbytes by default. For example, if the number 10 is specified, 10K is the maximum depth value used. However, if 1M is specified, the maximum depth value applied is 1 Mbyte.

- Modifying the maximum depth is most useful for low-bandwidth links.
**Examples**

-> qos port 3/1 maximum ingress-depth 10
-> qos port 4/1-8 maximum egress-depth 1m
-> qos port 3/1 no maximum ingress-depth
-> qos port 4/1-8 no maximum egress-depth

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- **qos apply**
  - Applies configured QoS and policy settings to the current configuration.

- **qos port**
  - Configures a physical port for QoS.

- **show qos port**
  - Displays information about QoS ports.

**MIB Objects**

  - alaQoSPortMaximumIngressDepth
  - alaQoSPortMaximumIngressDepthStatus
**qos port default 802.1p**

Configures the 802.1p value to be inserted in flows ingressing on an untrusted port.

**qos port chassis/slot/port[-port2] default 802.1p value**

---

**Syntax Definitions**

- **chassis**: The chassis identifier.
- **slot/port[-port2]**: A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).
- **value**: The priority value to be set. Values range from 0 (lowest priority) to 7 (highest priority).

---

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>0</td>
</tr>
</tbody>
</table>

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- By default untrusted ports will set the 802.1p bit to zero on incoming flows. Use this command to specify that a different 802.1p value should be applied to the flow.
- The default 802.1p value is not used if there is a matching QoS policy rule that sets the priority.
- Note that the 802.1p bit for tagged packets received on untrusted ports is set with the default 802.1p value, which is configured using the **qos port default 802.1p** command. If the packet is untagged, however, then the DSCP bit is set with the default DSCP value, which is configured using the **qos port default dscp** command.

---

**Examples**

- `-> qos port 3/1 default 802.1p 5`
- `-> qos port 4/1-8 default 802.1p 7`

---

**Release History**

Release 7.1.1; command was introduced.
Related Commands

qos apply
Applies configured QoS and policy settings to the current configuration.

qos port
Configures a physical port for QoS.

show qos port
Displays information about QoS ports.

MIB Objects
alaQoSPortTable
alaQoSPortDefault8021p
**qos port default dscp**

Configures the ToS/DSCP value to be inserted in flows ingressing on an untrusted port.

```command
text
```

**Syntax Definitions**

- `chassis` - The chassis identifier.
- `slot/port[-port2]` - A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).
- `value` - The ToS/DSCP value. The range is 0–63.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>0</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>model</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>

<tr>
<td>chassis</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- The value configured by this command sets the upper byte (precedence) and therefore configures the ToS/DSCP value for the port.
- The default DSCP value is not used if there is a matching QoS policy rule that sets the priority.
- Note that on the 802.1p bit for tagged packets received on untrusted ports is set with the default 802.1p value, which is configured using the `qos port default 802.1p` command. If the packet is untagged, however, then the DSCP bit is set with the default DSCP value, which is configured using the `qos port default dscp` command.

**Examples**

```
-> qos port 3/1 default dscp 63
-> qos port 4/1-8 default dscp 33
```

**Release History**

Release 7.1.1; command was introduced.
Related Commands

- **qos apply**: Applies configured QoS and policy settings to the current configuration.
- **qos port**: Configures a physical port for QoS.
- **show qos port**: Displays information about QoS ports.

MIB Objects

- **alaQoSPortTable**
  - **alaQoSPortDefaultDSCP**
**qos port default classification**

Specifies the default egress priority value to use for IP traffic ingressing on trusted ports.

```
qos port chassis/slot/port[-port2] default classification {tos | 802.1p | dscp}
```

### Syntax Definitions

- **chassis**
  - The chassis identifier.
- **slot/port[-port2]**
  - A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).
- **tos**
  - Specifies that the ToS value of the flow will be used to prioritize flows coming in on the port.
- **802.1p**
  - Specifies that the 802.1p value of the flow will be used to prioritize flows coming in on the port.
- **dscp**
  - Specifies that the DSCP value of the flow will be used to prioritize flows coming in on the port.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>tos</td>
<td>802.1p</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- The egress priority assigned to an IP packet received on a trusted port is based on the DSCP value of the packet unless 802.1p is specified using this command.

- The default classification priority is not used if there is a matching QoS policy rule that sets the egress priority value.

- This command does not affect Layer 2 traffic, which is always classified with 802.1p.

- In some network situations, some IP traffic may be dropped before any QoS rules can take effect for the traffic.
Examples

- `qos port 8/24 default classification dscp`
- `qos port 4/1-8 default classification dscp`
- `qos port 7/1 default classification 802.1p`
- `qos port 5/1-8 default classification 802.1p`

Release History

Release 7.1.1; command was introduced.

Related Commands

- `qos apply` Applies configured QoS and policy settings to the current configuration.
- `qos port` Configures a physical port for QoS.
- `show qos port` Displays information about QoS ports.

MIB Objects

- `alaQoSPortTable` `alaQoSPortDefaultClassification`
**qos port dei**

Configures the Drop Eligible Indicator (DEI) bit mapping and marking setting for the specified QoS port. The DEI setting applies to packets marked yellow (non-conforming) as the result of Tri-Color Marking (TCM) or other rate limiting mechanisms.

```bash
qos port chassis/slot/port dei {ingress | egress}
qos port chassis/slot/port no dei {ingress | egress}
```

**Syntax Definitions**

- `chassis` The chassis identifier.
- `slot/port[-port2]` The slot and port number (1/5).
- `ingress` Maps the DEI/CFI bit to yellow (non-conforming) if this bit is set for ingress traffic. **DEI mapping is not supported on the OmniSwitch 6465.**
- `egress` Marks the DEI/CFI bit for egress packets if the packets were marked yellow as a result of the rate limiting process.

**Defaults**

By default, no DEI/CFI bit mapping or marking is done.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to disable the DEI bit mapping (ingress) or marking (egress) configuration for the specified port.
- Use the `qos dei` command to set the global DEI bit mapping and marking configuration for all QoS switch ports. Note that the port-level setting takes precedence over the global DEI setting.
- Packets marked yellow by rate limiting are still transmitted when there is no congestion on the egress port queues. Setting the DEI bit for yellow egress packets (`qos port dei egress`) ensures that an upstream switch is made aware that the packet was marked yellow.
- When a switch receives a yellow packet with the DEI bit set and ingress DEI bit mapping is enabled (`qos port dei ingress`), the packet is mapped to an internal drop precedence or yellow color marking for the switch.
DEI bit mapping is not supported on the OmniSwitch 6465. As a result, packets are processed as follows on that switch:

- When packets are received on a trusted port, the DEI bit is retained only if the packets were not subject to a meter. If the port is untrusted, however, the DEI bit is always reset.
- When a meter is set and DEI egress is configured on a trusted port, the DEI bit is reset to 0 for green packets. Yellow–red packets egress with the DEI bit set to 1.

When the port is untrusted, DEI ingress is not supported on the OmniSwitch 6560 and OmniSwitch 6570M.

Examples

- `qos port 1/10 dei ingress`
- `qos port 1/20 dei egress`
- `qos port 1/10 no dei ingress`
- `qos port 1/20 no dei egress`

Release History

Release 7.2.1; command was introduced.

Related Commands

- `qos port` Configures a physical port for QoS.
- `qos dei` Configures the global Drop Eligible Indicator (DEI) bit mapping and marking setting for all QoS ports.

### qos qsp import

Imports a predefined QSet profile (QSP) to a new or previous custom profile.

```
qos qsp {qsp_id | qsp_name} import qsp {import_qsp_id | import_qsp_name}
no qos qsp {qsp_id | qsp_name}
```

#### Syntax Definitions

- **qsp_id**: A QSet custom profile ID. The valid custom profile ID range is 6–16.
- **qsp_name**: The QSet profile name.
- **import_qsp_id**: The ID of the QSet profile to import.
- **import_qsp_name**: The name of the QSet profile to import.

#### Defaults

N/A

#### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>X72</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

#### Usage Guidelines

- The new QSet profile must be unique and not contain the same name and ID of an existing QSet profile.
- Use the `no` form of the command to remove an existing custom QSet profile from the switch configuration.
- On the OmniSwitch 6360, OmniSwitch 6860N, OmniSwitch 6900-V72/C32, and OmniSwitch 6900-X48C6/T48C6/X48C4E/V48C8, the custom profile ID range is 3–8.
- On the OmniSwitch 6465, the custom profile ID range is 6–8.
- The following table lists which predefined QSPs can be used to import as a base for custom profiles:
The predefined QSet profiles cannot be removed from the switch configuration.

A custom profile can be assigned to any port or link aggregate, but not to a VFL link.

A custom profile attached to a port cannot be removed from the switch configuration. In this case, the profile must be disassociated from the port before being removed.

**Examples**

- `-> qos qsp 12 import qsp 1`
- `-> qos qsp qsp-16 import qsp 5`
- `-> no qsp 12`

**Release History**

Release 8.3.1.R02; command was introduced.

**Related Commands**

- **qos qsi qsp**
  Configures the QSet profile association for the QSet instance.

- **show qos qsp**
  Displays the QSet profile attributes.

**MIB Objects**

qos qsp qp

Modifies the Committed Information Rate (CIR), Peak Information Rate (PIR), scheduler, WFQ weight attributes for an individual queue profile (QP) associated with a custom QSet profile (QSP).

```
qos qsp {qsp_id | qsp_name} qp qp_id {cir % | pir % | weight weight | scheduler {sp | wrr | wrr2}}
```

### Syntax Definitions

- **qsp_id**: A QSet custom profile ID. The valid custom profile ID range is 6–16.
- **qsp_name**: The QSet custom profile name.
- **qp_id**: The queue profile number in the QSet custom profile.
- **cir %**: The Committed Information Rate to apply to queue traffic. This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, OmniSwitch 6570M and OmniSwitch 9900.
- **pir %**: The Peak Information Rate limit to apply to queue traffic.
- **weight**: The queue weight that is used to determine the amount of shared bandwidth allocated for queue traffic. The valid range is 1–100.
- **sp**: Selects the Strict Priority (SP) scheduler. This parameter is supported only on the OmniSwitch 6360 and OmniSwitch 6465.
- **wrr**: Selects the Weighted Round Robin scheduler (WRR). This parameter is supported only on the OmniSwitch 6360 and OmniSwitch 6465.
- **wrr2**: This parameter is not supported.

### Defaults

</tbody>
</table>

### Usage Guidelines

- The queue weight value is only used when WRR is the scheduler for the queue.
- The **cir**, **pir**, and **weight** attributes are only configurable for individual queues that are associated with a custom QSet profile. Changing the scheduler attribute is not supported.
- Changing the scheduler attribute is supported only on the OmniSwitch 6360 and OmniSwitch 6465.
• When a custom profile is modified, the changes are applied to all ports that are associated with that custom profile. To apply specific changes to a single port (QSet instance), import a predefined profile into a new custom profile, make the necessary changes, then apply the new custom profile to the port.

• Custom QSet profile supports a combination of SP and WRR schedulers configuration in the same QSet profile. For example, a custom QSet profile can have SP applied to one queue, and WRR scheduler to another queue.

**Examples**

```
-> qos qsp 6 qp 1 weight 2 pir 100
-> qos qsp 6 qp 2 weight 1 pir 100
-> qos qsp 6 qp 3 weight 3 pir 100
-> qos qsp 6 qp 4 weight 4 pir 100
-> qos qsp 6 qp 5 weight 2 pir 100
-> qos qsp 6 qp 6 cir 10 pir 50
-> qos qsp 6 qp 7 weight 2 pir 100
-> qos qsp 6 qp 8 scheduler sp
ERROR: scheduler change is not supported.
```

The following example shows the custom QSet profile configured with a combination of strict priority and WRR schedulers applied to different queues of the same QSet profile.

```
-> qos qsp "ale-qsp-5" import qsp "qsp-5"
-> qos qsp "ale-qsp-5" qp 1 weight 15
-> qos qsp "ale-qsp-5" qp 3 pir 20 scheduler sp
-> qos qsp "ale-qsp-5" qp 8 weight 4
```

**Release History**

Release 8.3.1.R02; command was introduced.
Release 8.7R1; scheduler parameter deprecated.
Release 8.8R2; scheduler parameter supported on OmniSwitch 6360 and OmniSwitch 6465.

**Related Commands**

- `qos qsp import` Creates a custom QSet profile.
- `show qos qsp` Displays the QSet profile attributes.

**MIB Objects**

```
alaVfcQProfileTable
alaVfcQProfileId
alaVfcQProfileName
alaVfcQProfile
alaVfcQPCIRBandwidthLimitType
alaVfcQPCIRBandwidthLimitValue
alaVfcQPPIRBandwidthLimitType
alaVfcQPPIRBandwidthLimitValue
alaVfcQPWFqWeight
alaVfcQPWFqMode
```
**qos qsi qsp**

Configures the QSet profile (QSP) association for the specified QSet instance (QSI). A QSI is a set of eight queues that is automatically associated with each port, link aggregate, and virtual fabric link (VFL).

```bash
qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[agg_id2] | vf-link vfl_id} qsp {qsp_id | qsp_name}
```

### Syntax Definitions

- **chassis**
  - The chassis identifier.

- **slot/port[-port2]**
  - The slot and port number to associate with the QSet. Use a hyphen to specify a range of ports (3/1-10).

- **agg_id[agg_id2]**
  - The link aggregate ID to associate with the QSet. Use a hyphen to specify a range of IDs (10-20).

- **vfl_id**
  - The VFL link ID (1/0). *This parameter option is supported only on the OmniSwitch 6860, OmniSwitch 6860N, and OmniSwitch 6865.*

- **qsp_id**
  - An existing QSet profile (QSP) ID number to assign to this instance. Refer to the table in the “Usage Guidelines” section of this command page for a list of the supported QSP IDs.

- **qsp_name**
  - An existing QSet profile name (for example, qsp-1) to assign to this instance.

### Defaults

By default, QSP 1 is assigned to each QSet instance.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- There is only one QSI for each port, link aggregate, and VFL and only one QSP associated with each QSI.

- A QSI hierarchy exists consisting of parent/child relationships. For example, all member ports of a link aggregate will import the QSI/QSP settings of the parent link aggregate. When a member port moves out of the link aggregate, the QSI/QSP settings for that port are reset to the default settings.

- The number of children supported for a LAG ID is 8.

- Use the following table to determine which QSP IDs a specific switch platform supports and whether configuring a custom QSP is supported on that platform:
On an OmniSwitch 6860, OmniSwitch 6860N, or OmniSwitch 6865, changing the QSP assignment for one VFL instance automatically changes the QSP assignment for all of the other VFL instances to the same QSP. For example, if QSP 2 is assigned to VFL 1/0, then the QSP assignment for VFL 2/0 is also changed to QSP 2. It is not necessary to configure the QSP assignment separately for each VFL on the switch.

**Examples**

-> qos qsi port 1/1/2 qsp 2  
-> qos qsi port 1/2/1-10 qsp 3  
-> qos qsi slot 3 qsp 4  
-> qos qsi linkagg 10 qsp 2

The following command examples show that when the QSP assignment for VFL 1 is changed to QSP 2, the QSP for VFL 2 is automatically changed as well:

-> qos qsi vf-link 1/0 qsp 2  
WARNING: configuration change applied to all VFLs in the system

-> show qos qsi vf-link 1/0 summary
Legends: * indicates port is misconfigured.

<table>
<thead>
<tr>
<th>Profile</th>

</tr>
</tbody>
</table>
**Release History**

Release 7.2.1.R02; command introduced.
Release 8.3.1; vf-link parameter added.

**Related Commands**

- **qos qsp import**
  Imports a predefined QSet profile (QSP) to a new or previous custom profile.

- **qos qsi stats**
  Configures statistics collection for the QSet instance.

- **show qos qsi**
  Displays the QSet instance configuration.

- **show qos qsp**
  Displays the QSet profile attributes.

**MIB Objects**

- alcatelIND1VfcMIB
- alaVfcQsetInstanceTable
  - alaVfcQsetId
  - alaVfcQsetQSPId
  - alaVfcQsetQSPName
**qos qsp system-default**

Changes the default QSet profile (QSP) that is assigned to each port, link aggregate ID, and virtual fabric link (VFL).

```
qos qsp system-default {qsp_id | qsp_name}
```

### Syntax Definitions

- **qsp_id**
  - An existing QSet profile (QSP) ID number to use as the default QSP.
  - The valid range is 1–4.

- **qsp_name**
  - An existing QSet profile name (qsp-1, qsp-2, qsp-3, qsp-4) to use as the default QSP.

### Defaults

By default, QSP 1 is assigned to each QSet instance.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- When this command is used, the specified QSP is assigned to all ports, link aggregates, and VFLs on the switch.

- Changing the system default profile is only allowed when the switch is running in the non-Data Center Bridging (NDCB) mode. This mode is active by default when there is no OmniSwitch Data Center software license installed on the switch.

- A QSP assigned through the `qos qsi qsp` command overrides the system default QSP assignment. For example, if the system default QSP is set to 1 and the `qos qsi qsp` command is used to change the QSP to 2 on port 1/1/20, the QSP 2 settings are applied to port 1/1/20.

### Examples

```
-> qos qsp system-default 2
-> qos qsp system-default qsp-4
```

### Release History

Release 8.3.1; command introduced.
Related Commands

- **qos qsi qsp**  Configures the QSet profile association for the QSet instance.
- **show qos qsp system-default**  Displays the name and ID of the default QSP for the switch.

MIB Objects

- **alcatelIND1VfcMIB**
  - **alaVfcSystemDefaultQsetQSPName**
  - **alaVfcSystemDefaultQsetQSPId**
**qos qsi stats**

Configures the administrative status and interval for statistics collection for the specified QSet instance (QSI). A QSI is a set of eight queues that is automatically associated with each port and link aggregate (LAG) ID.

```
qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} stats {admin-state {enable | disable} | interval interval_time}
```

### Syntax Definitions

- **chassis**: The chassis identifier.
- **slot/port[-port2]**: The slot and port number to associate with the QSet. Use a hyphen to specify a range of ports (3/1-10).
- **agg_id[-agg_id2]**: The link aggregate ID to associate with the QSet. Use a hyphen to specify a range of IDs (10-20).
- **enable**: Enables statistics collection for the instance.
- **disable**: Disables statistics collection for the instance.
- **interval_time**: The time interval for statistics gathering. The valid range is 10–300 seconds.

### Defaults

By default, statistics collection is disabled and the time interval is set to 10 seconds.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- There is only one QSI per port or LAG ID and only one QSet profile (QSP) or DCB profile (DCP) associated with the QSI.
- Changing the statistics collection status for a QSI only changes the status for the port or link aggregate to which the QSI is associated.

### Examples

- `-> qos qsi port 1/2 stats admin-state enable`
- `-> qos qsi port 1/2 stats interval 30`
- `-> qos qsi port 2/1-10 stats admin-state enable`
- `-> qos qsi linkagg 10 stats admin-state enable interval 120`

alaVfcQsetInstanceTable
  alaVfcQsetQSPId
  alaVfcQsetQSPName
  alaVfcQsetStatsAdmin
  alaVfcQsetStatsInterval
**show qos port**

Displays information about all QoS ports or a particular port.

`show qos port [chassis/slot/port]`

---

**Syntax Definitions**

- `chassis` The chassis identifier.
- `slot/port[-port2]` The slot and port number (3/1).

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6</th>
<th>6900 X48C4E/V48C8</th>
<th>6900 C32E/T24C2/ X24C2</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Information for all ports is displayed unless a particular port is specified.
- Use the `qos port` command to configure port parameters.
- For ports that are trusted (Yes displays in the Trust field), the Trust field includes one of the following characters:

<table>
<thead>
<tr>
<th>character</th>
<th>definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>+</td>
<td>Indicates that the port is manually configured as trusted through the <code>qos port trusted</code> command; the port setting takes precedence over the global trust setting configured through the <code>qos trust-ports</code> command.</td>
</tr>
<tr>
<td>*</td>
<td>Indicates that the port is automatically trusted regardless of the global setting set through the <code>qos trust-ports</code> command. (Applies to mobile ports and ports configured for 802.1Q.)</td>
</tr>
</tbody>
</table>

- Dash (`-`) in the Bandwidth signifies the ingress/egress default value, which is equal to the port physical bandwidth. This means, the maximum ingress/egress bandwidth is not explicitly configured.
### Examples

```plaintext
-> show qos port

<table>
<thead>

show qos slice

Displays rule availability and usage information for QoS slices of QoS slots. A slice is a logical section of hardware and corresponds to particular ports on the interface.

show qos slice [slot/slice]

Syntax Definitions

slot/slice The slot number and slice for which you want to view information. The number of slices per module varies depending on the type of module.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>

Usage Guidelines

- Information for all slots/slices is displayed unless a particular slot/slice is requested.
- This command is useful for monitoring switch resources required for policy rules.
- On the following switch platforms, use the show tcam utilization command instead of the show qos slice command:
  - OmniSwitch 6360
  - OmniSwitch 6465
  - OmniSwitch 6560
  - OmniSwitch 6570M
  - OmniSwitch 6860N
  - OmniSwitch 6900-V72/C32
  - OmniSwitch 6900-X48C6/T48C6/X48C4E/V48C8
  - OmniSwitch 9900

Examples

-> show qos slice

<table>
<thead>
<tr>

output definitions

- **Slot/Unit**: The slot and slice number.
- **Type**: The type of slice.
- **Ranges Total**: The total number of TCP/UDP port ranges supported per slot/slice.
- **Ranges Free**: The number of TCP/UDP port ranges that are still available for use.
- **CAM**: The CAM number.
- **Rules Total**: The total number of rules supported per CAM.
- **Rules Free**: The number of rules that are still available for use. On startup, the switch uses 27 rules.
- **Counters Total**: The total number of counters supported per CAM.
- **Counter Free**: The number of counters that are still available for use.
- **Meters Total**: The total number of meters supported per CAM.
- **Meters Free**: The number of meters that are still available for use.

Release History

Release 7.1.1; command was introduced.

Related Commands

- **policy rule**: Configures a policy rule on the switch. A rule is made up of a condition (for classifying incoming traffic) and an action (to be applied to outgoing traffic).

MIB Objects

N/A
show qos log

Displays the log of QoS events.

show qos log

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

</tr>
</tbody>
</table>

**Usage Guidelines**

Use this command to view the current global configuration for QoS. Use the **show qos statistics** command to view statistics about the QoS software in the switch.

**Examples**

```plaintext
-> show qos config
QoS Configuration
Admin = enable,
Switch Group = expanded,
Trust ports = no,
Phones = trusted,
Log lines = 10240,
Log level = 5,
Log console = no,
Forward log = no,
Stats interval = 60,
User-port filter = spoof,
User-port shutdown = none,
Debug = info,
DEI Mapping = Disabled,
DEI Marking = Disabled,
Pending changes = none
```
output definitions

<table>
<thead>
<tr>
<th></th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Admin</td>
<td>Whether or not QoS is enabled or disabled. Configured through the <code>qos</code> command.</td>
</tr>
<tr>
<td>Switch Group</td>
<td>Whether the expanded or compact method is used to populate the hardware routing table. Configured through the <code>qos switch-group</code> command.</td>
</tr>
<tr>
<td>Trust Ports</td>
<td>The default trusted mode for switch ports. Configured through the <code>qos trust-ports</code> command.</td>
</tr>
<tr>
<td>Phones</td>
<td>Whether or not IP Phone traffic is automatically trusted or assigned a priority value. Configured through the <code>qos phones</code> command.</td>
</tr>
<tr>
<td>Log lines</td>
<td>The number of lines included in the QoS log. Configured through the <code>qos log lines</code> command.</td>
</tr>
<tr>
<td>Log level</td>
<td>The level of log detail. Configured through the <code>qos log level</code> command.</td>
</tr>
<tr>
<td>Log console</td>
<td>Whether or not log messages are sent to the console. Configured through the <code>qos log console</code> command.</td>
</tr>
<tr>
<td>Forward log</td>
<td>Whether or not logged events are sent to the policy server software in the switch in real time. Configured through the <code>qos forward log</code> command.</td>
</tr>
<tr>

**Actions**
- The number of Layer 2 or Layer 3 flows transmitted on the switch.

**Conditions**
- The number of Layer 2 or Layer 3 flows that match policies.

**Drops**
- The number of Layer 2 or Layer 3 flows that were dropped.

**L2**
- The number of Layer 2 events, matches, and drops.

**L3 Ingress**
- The number of Layer 3 ingress events, matches, and drops.

**L3 Egress**
- The number of Layer 3 egress events, matches, and drops.

**IGMP join**
- The number of multicast events, matches, and drops.

**Fragments**
- The number of fragments dropped.

**Bad Fragments**
- The number of fragments received with an offset of 1.

**Unknown Fragments**
- The number of out-of-order fragments received.

**Sent NI messages**
- The number of messages sent to network interfaces.

**Received NI messages**
- The number of messages received by network interfaces.

**Failed NI messages**
- The number of failed message attempts to network interfaces.

**Load balanced flows**
- The number of Server Load Balance flow entries.

**Reflexive flows**
- The number of reflexive flows.

**Reflexive correction**
- The number of reflexive flow corrections.

**Flow lookups**
- The number of flow table lookups.

**Flow hits**
- The number of flow table lookup hits.

**Max PTree nodes**
- The highest number of nodes in the classifier tree.

**Max Ptree depth**
- The length of the longest path in the classifier tree.

**Spoofed Events**
- The number of spoofed events.

**Nonspoofed Events**
- The number of non-spoofed events.

**DropServices**
- The number of TCP/UDP flows dropped.

**Release History**

Release 7.1.1; command was introduced.

**show qos qsi summary**

Displays a list of switch ports showing the QoS or DCB profile assigned to each port.

```
show qos qsi [port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]] summary
```

### Syntax Definitions

- **chassis**
  - The chassis identifier.

- **slot/port[-port2]**
  - The slot and port number (3/1). Use a hyphen to specify a range of ports (1/5-10).

- **agg_id[-agg_id2]**
  - A link aggregate ID. Use a hyphen to specify a range of IDs (10-15).

### Defaults

By default, a summary of all ports is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6/X48C8/C32E/T24C2</th>
<th>9900</th>
</tr>
</thead>
<tbody>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

Enter a port or link aggregate ID with this command to display information for a specific port or link aggregate.

### Examples

```
-> show qos qsi summary
Legends: * indicates port is misconfigured.

<table>
<thead>
<tr>
<th>Profile</th>
</tr>
</thead>
<tbody>
<tr>
<td>Port</td>
</tr>
<tr>
<td>---------</td>
</tr>
<tr>
<td>1/1/1</td>
</tr>
<tr>
<td>1/1/2</td>
</tr>
<tr>
<td>1/1/3</td>
</tr>
<tr>
<td>1/1/4</td>
</tr>
<tr>
<td>1/1/5</td>
</tr>
<tr>
<td>1/1/6</td>
</tr>
</tbody>
</table>

-> show qos qsi port 1/1-5 summary
Legends: * indicates port is misconfigured.

<table>
<thead>
<tr>
<th>Profile</th>
</tr>
</thead>
<tbody>
<tr>
<td>Port</td>
</tr>
<tr>
<td>---------</td>
</tr>
</tbody>
</table>
```
### QoS Commands

show qos qsi summary

<table>
<thead>
<tr>
<th>Port</th>
<th>Profile</th>
<th>Name</th>
<th>Mode</th>
<th>Parent</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/1/1</td>
<td>qsp-1</td>
<td>NDCB 1/1/1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>1/1/2</td>
<td>qsp-1</td>
<td>NDCB 1/1/2</td>
<td></td>
<td></td>
</tr>
<tr>
<td>1/1/3</td>
<td>qsp-1</td>
<td>NDCB 1/1/3</td>
<td></td>
<td></td>
</tr>
<tr>
<td>1/1/4</td>

<td></td>
<td></td>
</tr>
</tbody>
</table>

**output definitions**

- **Port**: Configured DCB ports.
- **Profile #**: Identifies the DCB profile assigned to the port.
- **Profile Name**: Name of the DCB profile assigned to the port.
- **Mode**: Indicates if the port is DCB or NDCB.
- **Parent**: Lists the parent of the port.

### Release History

Release 7.3.1; command was introduced.

### Related Commands

- **show qos qsi dcb dcbx**: Displays the configured ports in the system and the related DCBX information.
- **qos qsi qsp dcb**: Assigns a DCB profile to a port or link aggregate.

### MIB Objects

- `alaVfcQsetInstanceTable`
  - `alaVfcQsetId`
  - `alaVfcQsetQSPId`
  - `alaVfcQsetQSPName`
  - `alaDcbxPortInstanceTable`
  - `alaVfcQsapParent`
**show qos qsp**

Displays the QSet profile (QSP) configuration for the switch.

```
show qos qsp [qsId | qsName] [brief | detail [port chassis/slot/port[-port2]] | linkagg agg_id[-agg_id2]]
```

---

**Syntax Definitions**

- **qsId**
  - A QSet profile (QSP) ID number. Refer to the table in the “Usage Guidelines” section for a list of the supported QSP IDs.

- **qsName**
  - The name of a QSP profile.

- **brief**
  - Displays a summary of the QSP configuration.

- **detail**
  - Displays QSP configuration details for a specific profile, port, slot, or link aggregate.

- **chassis**
  - The chassis identifier.

- **slot/port[-port2]**
  - A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).

- **agg_id[-agg_id2]**
  - The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).

---

**Defaults**

By default, displays the configuration for all of the QSet profiles.

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- Use the `qsId` or the `qsName` parameter to display information for a specific profile.

- Use the `detail` parameter in combination with the `port slot/port` and `linkagg agg_id` parameters to display profile information associated with specific ports or link aggregates.

- Configuring a QSP assignment for a virtual fabric link (VFL) is supported only on the OmniSwitch 6860, OmniSwitch 6860N, and OmniSwitch 6865.

- The following QSPs are supported on the specified switch platforms:

output definitions

QSP The QSet profile (QSP) ID number and name.
#Ports The number of ports to which this profile is attached.
#Queues The number of queues associated with this QSet. Currently there are eight queues for each QSet.
BW% The bandwidth percentage for the QSet. The bandwidth is shared between all the queues.
WRP Not supported in this release.
Name Not supported in this release.
Scheduler The type of scheduler, such as queue specific priority (Qspec) or strict priority.
Type Whether the QSP is static (predefined) or dynamic (user-configured). Refer to the table in the “Usage Guidelines” section for a list of the predefined QSPs and to determine whether user-configured QSPs are supported.
QP 1...8 The queue profile configuration for each QSet queue. The configuration for each of the individual queue profiles is defined by the QSP in use. For example, QSP 1 applies a different queue configuration than QSP 2, 3, or 4.

output definitions

Profile The QSet profile (QSP) ID number.
Name The QSP name.
#Ports The number of ports to which this profile is attached.
#Queues The number of queues associated with this QSet. Currently there are eight queues for each QSet.
**output definitions (continued)**

**BW%**
The bandwidth percentage for the QSet. The bandwidth is shared between all the queues.

**Type**
Whether the QSP is static (predefined) or dynamic (user-configured). Refer to the table in the “Usage Guidelines” section for a list of the predefined QSPs and to determine whether user-configured QSPs are supported.

**Base Profile**
The profile on which the QSP is based. The profile number will differ for user-configured profiles.

QoS Commands

show qos qsp

| 1/1/12 | Phy | Port 1/1/12 | 1 | qsp-1 | Port 1/1/12 | 100 | 100 | S |

output definitions

- **QSAP Port**: The port number, link aggregate ID, or virtual fabric link (VFL) ID for the QSet attachment point (QSAP). A QSAP is a logical entity generated internally by the switch to identify the association between a QSet instance and a port, link aggregate, and VFL. The QSAP is not configurable at this time.

- **QSAP Type**: The type of QSAP port; Phy = physical (slot/port), Log = logical (linkagg ID or VFL ID).

- **dQSI**: The default QSet instance (dQSI) ID number. This number is generated internally by the switch to identify the QSI that is automatically assigned to each port, link aggregate, and VFL.

- **ID**: The QSet profile (QSP) ID number.

- **Name**: The QSP name.

- **QSAP Parent**: The QSAP parent ID number. If the parent ID is different than the QSAP ID, then the port is a member of a link aggregate or a VFL.

- **BW (%) Admin**: The administrative bandwidth percentage for the QSet. The administrative percentage is not configurable at this time.

- **BW (%) Oper**: The operational percentage of bandwidth as determined by the port speed. For a link aggregate, this value is the sum of the operational bandwidth percentages for the member ports.

- **T**: Whether the QSP type is static (S) or dynamic (D). Refer to the table in the “Usage Guidelines” section for a list of the static (predefined) QSPs and to determine whether dynamic (user-configured) QSPs are supported.

Release History

Release 7.2.1; command was introduced.

Related Commands

- **qos qsi qsp**: Changes the QSet profile association for a QSet instance.
- **show qos qsi**: Displays the QSet instance configuration.

MIB Objects

- `alcatelIND1VfcMIB`

  - `alaVfcQSPAttachmentCount`
show qos wrp

Displays the Weighted Random Early Detection (WRED) profile (WRP) configuration for the switch.

```
show qos wrp [wrp_id | wrp_name] [detail [port chassis/slot/port[-port2]]] | slot slot | linkagg agg_id[-agg_id2]]
```

### Syntax Definitions

- **wrp_id**
  - A WRED profile (WRP) ID number. The valid range is 1.

- **wrp_name**
  - A WRED profile name.

- **detail**
  - Displays WRED profile configuration details for a port, slot, or link aggregate.

- **chassis**
  - The chassis identifier.

- **slot/port[-port2]**
  - The slot and port number of a non-DCB (Data Center Bridging) port. Use a hyphen to specify a range of ports (1/5-10).

- **slot**
  - A slot number. Displays information for all non-DCB ports on the slot.

- **agg_id[-agg_id2]**
  - The link aggregate ID for a non-DCB aggregate. Use a hyphen to specify a range of IDs (10-15).

### Defaults

N/A

### Platforms Supported

Not supported in this release.

### Usage Guidelines

- This command is not supported on OmniSwitch 6900 DCB ports.
- Use the `wrp_id` or the `wrp_name` parameter to display information for a specific profile.
- Use the `detail` parameter to display additional profile information, such as the profile configuration associated with queues and ports.
- Use the `port slot/port, slot slot, and linkagg agg_id` parameters to display profile information associated with specific ports or link aggregates. These parameters are used in combination with the `detail` parameter.

### Examples

```
-> show qos wrp
WRP  1 (wrp-1)
  #Ports:  480, MTU:  1540
  Red
    Min-Th:  10, Max-Th:  50, Max-Pb:  36, Gain:  9
  Yellow
    Min-Th:  50, Max-Th:  90, Max-Pb:  30, Gain:  9
  Green
    Min-Th:  90, Max-Th: 100, Max-Pb:  24, Gain:  9
```
### QoS Commands

#### show qos wrp

```

<tr>
<td>Gain</td>
<td>The gain value to smooth out the queue (1–15).</td>
</tr>
</tbody>
</table>

### Port

The physical slot and port number (or link aggregate ID for a logical port).

### QSAP

The QSet attachment point (QSAP). This is a logical entity used internally by the switch to identify the association between a QSet instance and a port or link aggregate. The QSAP is not configurable at this time.

### Parent

The QSAP ID for the parent QSAP, if any.

### WRP Name Admin

The WRED profile (WRP) ID number, name, and administrative status.

### QSI

The switch port associated with the QSet instance (QSI).

### QSP Name Admin

The QSet profile (QSP) ID number, name, and administrative status.

### QI 1...8

The WRP information for each of the QSet queues.
Release History

Release 7.2.1; command was introduced.

Related Commands

qos qsi qsp
Changes the QSet profile association for a QSet instance.
show qos qsi
Displays the QSet instance configuration.

<td>Displays additional queue information for the instance.</td>
</tr>
<tr>
<td>summary</td>
<td>Displays summary information for the instance.</td>
</tr>
</tbody>
</table>

**Defaults**

By default, displays the entire QSI configuration for the switch.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 V72/C32</th>
<th>6900 X48C4E/V48C8/C32E/T24C2</th>

</tr>
</tbody>
</table>
**output definitions (continued)**

**BW Oper (%)**
The operational percentage of bandwidth as determined by the port speed. For a link aggregate, this value is the sum of the operational bandwidth percentages for the member ports.

**QI 1–8**
The queue scheduling and bandwidth configuration for each QSI queue. These values are determined by which one of the QSet profiles (QSP 1–4) is associated with the QSI.

```
-> show qos qsi port 1/1/20 summary

</thead>
<tbody>
<tr>
<td></td>
<td>vfl-1/0</td>
<td>qsp-2</td>
<td>NDCB</td>
<td>vfl-1/0</td>
</tr>
</tbody>
</table>
```

**output definitions**

**Port**
The physical slot and port number (or link aggregate ID or VFL ID for a logical port).

**Profile #, Name**
The QSet profile (QSP) ID number and name associated with the QSI.

**Mode**
The QSI operating mode (**NDCB** or **DCB**). This mode determines whether Data Center Bridging (DCB) profiles or QSet profiles (non-DCB) are applied to the QSI instance. DCB and QSet profiles are mutually exclusive in that if the OmniSwitch Data Center software license is installed, only DCB profiles are applied.

**Parent**
The parent QSAP ID. If the parent ID is different than the QSAP ID, then the port is a member of a link aggregate or VFL.

**Release History**

Release 7.1.1; command was introduced.
Release 7.2.1; output display modified for the OmniSwitch 6900.
Release 7.2.1.R02; output display modified for the OmniSwitch 6900.
Release 8.3.1; **vf-link** and **summary** parameters added.

**Related Commands**

- **qos qos qsp**
  Changes the QSet profile association for a QSet instance.

- **show qos qsi stats**
  Displays packet count statistics collected for a specific QSet instance.

show qos qsi stats

Displays statistics for the QSet instance (QSI) queues that are associated with non-DCB (NDCB) ports.

```bash
show qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} stats [bytes | rate [bytes]]
```

### Syntax Definitions

- **chassis**
  - The chassis identifier.

- **slot/port[-port2]**
  - The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).

- **agg_id[-agg_id2]**
  - The link aggregate ID number. Use a hyphen to specify a range of IDs (10-15).

- **bytes**
  - Displays the total number of bytes (instead of packets) that flow through the QSI queues.

- **rate**
  - Displays the number of packets-per-second that flow through the QSI queues.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>bytes</td>
<td>bytes</td>
</tr>
<tr>
<td>rate</td>
<td>bytes</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>Supported</th>
</tr>
</thead>
<tbody>
<tr>
<td>6360</td>
<td>Yes</td>
</tr>
<tr>
<td>6465</td>
<td>Yes</td>
</tr>
<tr>
<td>6560</td>
<td>Yes</td>
</tr>
<tr>
<td>6570M</td>
<td>Yes</td>
</tr>
<tr>
<td>6860</td>
<td>Yes</td>
</tr>
<tr>
<td>6860N</td>
<td>Yes</td>
</tr>
<tr>
<td>6865</td>
<td>Yes</td>
</tr>
<tr>
<td>6900</td>
<td>Yes</td>
</tr>
<tr>
<td>6900 V72/C32</td>
<td>Yes</td>
</tr>
<tr>
<td>9900</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- The specified port or link aggregate must have statistics collection enabled.
- Use the `port slot/port` or `linkagg agg_id` parameters to display QSI statistics associated with specific ports or link aggregates.
- It is possible to combine the `bytes` parameter with the `rate` parameter to display the number of bytes-per-second that flow through the QSI queues. For example, `show qos qsi port 1/20 stats rate bytes`.
- Statistics are displayed on a per-queue basis for each port. There are eight queues associated with a single QSet instance. Each queue is identified with a queue ID (1–8). Each port and link aggregate is associated with one QSet instance.
### Examples

```plaintext
-> show qos qsi port 1/20 stats

<table>
<thead>
<tr>
<th>Port</th>

Release History

Release 7.3.1; command was introduced.

Related Commands

- **qos qsi stats**: Enables or disables statistics collection for a DCB or non-DCB port.
- **clear qos qsi stats**: Clears statistics collected for one or more QSet instances.

MIB Objects

- **alaVfcQInstanceTable**
  - **alaVfcQInstancePacketsEnqueued**
  - **alaVfcQInstanceBytesEnqueued**
  - **alaVfcQInstancePacketsDropped**
  - **alaVfcQInstanceBytesDropped**
**show qos qsi ecn-stats**

Displays the Enhanced Congestion Notification (ECN) statistics of a port or linkagg.

```
show qos qsi [port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2] ecn-stats [bytes | rate [bytes]]
```

**Syntax Definitions**

- `chassis` The chassis identifier.
- `slot/port[-port2]` The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
- `agg_id[-agg_id2]` The link aggregate ID number. Use a hyphen to specify a range of IDs (10-15).
- `bytes` Displays the total number of bytes (instead of packets) that flow through the QSI queues.
- `rate` Displays the number of packets-per-second that flow through the QSI queues.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

output definitions

- **Linkagg**: The link aggregate ID.
- **Port**: The port number.
- **Q**: The egress queue ID (1-8) associated with the port.
- **Tx**: The total packets or bytes transmitted.
- **ECN Marked Tx**: The number of ECN marked packets or bytes transmitted. ECN Marked Tx packets and bytes statistics are not available.
- **WRED Drop**: The number of WRED (Non ECT) packets/bytes dropped. WRED drop bytes statistics are not available.
- **Q-Full Drop**: (Total packets/bytes dropped) - (WRED packets/bytes dropped). Q-Full drop packets and bytes statistics are not available.

Release History

show qos qsi wred-stats

Displays the Weighted Random Early Detection (WRED) statistics for the QSet instance.

show qos qsi {port chassis/slot/port[-port2] | slot slot | linkagg agg_id[-agg_id2]} wred-stats [rate | bytes]

Syntax Definitions

chassis
The chassis identifier.

slot/port[-port2] The slot and port number of a non-DCB (Data Center Bridging) port. Use a hyphen to specify a range of ports (1/5-10).

agg_id[-agg_id2] The link aggregate ID number of a non-DCB aggregate. Use a hyphen to specify a range of IDs (10-15).

rate Displays the number of packets per second.

bytes Displays the total number of bytes.

Defaults

By default, displays the total number of packets for all the QSI queues.

Platforms Supported

Not supported in this release.

Usage Guidelines

- This command is not supported on OmniSwitch 6900 DCB ports.
- Use the port slot/port, slot slot, and linkagg agg_id parameters to display QSI statistics associated with specific ports or link aggregates.
- This command displays the total number of packets or bytes.

Examples

-> show qos qsi port 1/2 wred-stats
* OS6900 WRED Per Q stats not supported, Tx stats not supported

<table>
<thead>
<tr>
<th>Port</th>
<th>Q Drop</th>
<th>Yellow</th>
<th>Red</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/2</td>
<td>0</td>
<td>0</td>
<td>0</td>
</tr>
</tbody>
</table>

-> show qos qsi port 1/1 wred-stats rate
* OS6900 WRED Per Q stats not supported, Tx stats not supported

<th>Drop</th>
<th>Drop</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/1</td>
<td>-</td>
<td>0</td>
<td>0</td>
<td>0</td>
</tr>
</tbody>
</table>

**output definitions**

- **Port**: The switch port.
- **Q**: The egress queue ID (1–8) associated with the port.
- **Green TX, Green Drop**: The number of green packets or bytes transmitted and dropped.
- **Yellow TX, Yellow Drop**: The number of yellow packets or bytes transmitted and dropped.
- **Red TX, Red Drop**: The number of red packets or bytes transmitted and dropped.

**Release History**

Release 7.2.1.R01; WRED per Q stats not supported; Tx stats not supported.

**Related Commands**

- **show qos qsi**: Displays the QSet instance configuration.
- **clear qos qsi stats**: Clears statistics collected for one or more QSet instances.

**MIB Objects**

- `alaVfcQInstanceRedPacketsAccepted`
- `alaVfcQInstanceRedBytesAccepted`
- `alaVfcQInstanceRedPacketsDropped`
- `alaVfcQInstanceRedBytesDropped`
**show qos qsp system-default**

Displays the name and ID of the QSet profile (QSP) that serves as the default system QSP when the switch is running in the non-DCB (NDCB) mode.

```
show qos qsp system-default
```

**Syntax Definitions**

N/A

**Defaults**

By default, QSP 1 is assigned to each QSet instance.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

```
+-------+-------+-------+-------+-------+-------+-------+-------+
| 6360  | 6465  | 6560  | 6570M | 6860  | 6860N | 6865  | 6900  |
+-------+-------+-------+-------+-------+-------+-------+-------+
|    No |    No |    No |    No | Yes   | Yes   | Yes   | No    |
|-------+-------+-------+-------+-------+-------+-------+-------+
|     6900 V72/C32 |     6900 X48C6/T48C6 |     6900 X48C4E/V48C8/C32E/T24C2 |     9900 |
+-------+-------+-------+-------+-------+-------+-------+-------+
|     No |     No |     No |     No |     No |     No |     No |     No |
+-------+-------+-------+-------+-------+-------+-------+-------+
```

**Usage Guidelines**

- The switch is operating in the NDCB mode when the OmniSwitch Data Center software license is *not* installed on the switch.
- The switch is operating in the Data Center Bridging (DCB) mode when the OmniSwitch Data Center software license is installed on the switch. Configuring the system default profile is not supported in the DCB mode.

**Examples**

```
-> show qos qsp system-default
NDCB Default QSP profile : 1 (qsp-1)
```

**Release History**

Release 8.3.1; command introduced.
QoS Commands

show qos qsp system-default

Related Commands

cos qsp system-default

Configures the default QSet profile for the switch.

MIB Objects

alcatelIND1VfcMIB

alaVfcSystemDefaultQsetQSPName

alaVfcSystemDefaultQsetQSPId
clear qos qsi stats

Clears QSet instance (QSI) statistics.

clear qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} stats

Syntax Definitions

- **chassis**: The chassis identifier.
- **slot/port[-port2]**: The slot and port number (1\5). Use a hyphen to specify a range of ports (1/5-10).
- **agg_id[-agg_id2]**: The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6/</th>
<th>9900 X48C4E/N48C8/</th>

<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the **port slot/port** and **linkagg agg_id** parameters to clear QSI statistics associated with specific ports or link aggregates.
- QSI statistics can only be cleared on ports or link aggregates that have statistics collection enabled.

Examples

-> clear qos qsi port 1/1/2 stats
-> clear qos qsi port 1/1/10-15 stats
-> clear qos qsi linkagg 5 stats
-> clear qos qsi linkagg 10-15 stats

Release History

Release 7.1.1; command was introduced.
QoS Commands

Related Commands

`show qos qsi stats`  Displays QSet instance statistics.

MIB Objects

alcatelIND1VfcMIB
alaVfcQsapTable
  alaVfcQsapClearStats
  alaVfcQsapQpId
**qos qsp dcb import**

Imports a Data Center Bridging profile (DCP) to a new or previous custom profile.

```
qos qsp dcb {dcp_id | dcp_name} import qsp dcb {import_dcp_id | import_dcp_name} [802.3x-pause]
```

```
no qos qsp dcb {dcp_id | dcp_name}
```

### Syntax Definitions

- **dcp_id**: A DCB custom profile ID. The valid custom profile ID range is 12 through 128.
- **dcp_name**: The DCB profile name.
- **import_dcp_id**: The ID of the DCB profile to import. The valid profile ID range is 1–11 to specify a predefined profile and 12–128 to specify a custom profile.
- **import_dcp_name**: The name of the DCB profile to import.
- **802.3x-pause**: Makes the profile pause-ready. When enabled, the Priority based Flow Control (PFC) is lossy for all traffic classes in the profile and they cannot be changed to lossless.

### Defaults

By default the **802.3x-pause** flag is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- The new DCB profile must be unique and not contain the same name and ID of an existing DCB profile.
- On an OmniSwitch 6900-Q32, only import DCB profile 8 to create a custom profile. Do not use any of the other pre-defined profiles to create a custom profile.
- Use the **no** form of the command to remove an existing custom DCB profile from the switch configuration.
- The pre-defined DCB profiles from 1 to 11 cannot be removed from the switch configuration.
- A custom profile attached to a port cannot be removed from the switch configuration. In this case, the profile must be disassociated from the port before being removed.
Use the **802.3x-pause** tag to enable pause-ready on the profile. When enabled, the PFC is lossy for all traffic classes in the profile and they cannot be changed to lossless. This type of custom profile is created to support legacy PAUSE frames on ports to which the profile is applied. However, before applying the custom profile to a port, disable PFC TLV and PFC willing on the port.

**Examples**

```
-> qos qsp dcb 33 import qsp dcb 8
-> qos qsp dcb lossyETS import qsp 10
-> qos qsp dcb 34 import qsp dcb 7 802.3x-pause
-> no qsp dcb 33
```

**Release History**

Release 7.3.1; command was introduced.

**Related Commands**

- `show qos qsp dcb` Displays the configured DCB profile and the traffic classes associated to the DCB profile.
- `show qos qsi stats` Displays the queue statistics for DCB and Non-DCB (NDCB) ports.
- `clear qos qsi dcb pfc stats` Clears the port statistics.

**MIB Objects**

- `alaDcbxDCProfileTable`
- `alaDcbxDCPId`
- `alaDcbxDCPName`
- `alaDcbxDCPTemplateDCPId`
- `alaDcbxDCPTemplateDCPName`
- `alaDcbxDCP8023xPauseReady`
- `alaDcbxDCPRowStatus`
**qos qsp dc**

Modifies the Data Center Bridging (DCB) traffic class attributes of a DCB profile.

```bash
qos qsp dc {dcp_id | dcp_name} tc tc_num {pfc flow-type { ll | nll} | pfc link-delay allowance | min-bw % | max-bw % | recommended bw %}
```

### Syntax Definitions

**dcp_id**
A DCB custom profile ID. The valid custom profile ID range is 12 through 128.

**dcp_name**
The DCB custom profile name.

**tc_num**
The traffic class number in the DCB profile.

**ll**
Designates traffic class as lossless.

**nll**
Designates traffic class as non-lossless (lossy).

**allowance**
Link delay allowance value for PFC.

**min-bw %**
Sets the minimum bandwidth guaranteed for the Enhanced Transmission Selection (ETS) traffic class.

**max-bw %**
Sets the maximum bandwidth guaranteed for the Strict Priority (SP) traffic class.

**recommended bw %**
Sets the recommended minimum bandwidth for the traffic class.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- The **pfc flow-type** option is used to change a traffic class from lossless (ll) to lossy (nll) or from lossy (nll) to lossless (ll).
- The **pfc link-delay** option sets the actual headroom for the traffic class. An incorrect setting can result in traffic loss.
- The **min-bw** option sets the minimum bandwidth guaranteed for the ETS traffic class.
- The **max-bw** option sets the maximum bandwidth guaranteed for the SP traffic class.
- The **recommended bw** option sets the recommended minimum bandwidth for the traffic class.
**Examples**

```
-> qos qsp dcbb 11 tc 0 min-bw 3
-> qos qsp dcbb lossyETS tc 1 min-bw 12
-> qos qsp dcbb lossyETS tc 2 pfc flow-type ll
-> qos qsp dcbb 11 tc 0 recommended bw 3
```

**Release History**

Release 7.3.1; command was introduced.

**Related Commands**

```
show qos qsp dcbb
```

Displays the configured DCB profiles and the traffic classes associated to the DCB profile.

**MIB Objects**

```

  alaDcbxDCPTCRecommendedBandwidth
```
**qos qsp dcb tc-numbering**

Modifies the traffic class (TC) numbering for custom profiles.

```
qos qsp dcb {dcp_id | dcp_name} tc-numbering tc_num
```

**Syntax Definitions**

- `dcp_id`: A DCB custom profile ID. The valid custom profile ID range is 12 through 128.
- `dcp_name`: The DCB custom profile name.
- `tc_num`: Enter the traffic class numbering sequence for the DCB profile.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- The command can be used to modify the traffic class numbering for the custom profiles.
- The numbering must be assigned in ascending order. For example, a profile with TCs numbered 0, 1, 2, can be changed to 1, 5, 7.
- The number of TCs specified must match the number of TCs in the profile.

**Examples**

```
-> qos qsp dcb 11 tc-numbering 1 5 7 9
```

**Release History**

Release 7.3.1; command was introduced.
Related Commands

show qos qsp dcb

Displays the configured DCB profiles and the traffic classes associated to the DCB profile.

MIB Objects

alaDcbxDProfileTable
  alaDcbxDCTCDCPName
  alaDcbxDCTCSPresent
**qos qsi qsp dcb**

Assigns a DCB profile to a port or link aggregate.

```
qos qsi {port chassis[slot/port[-port2]} | linkagg agg_id[-agg_id2]} qsp dcb {dcp_id | dcb_name}
```

**Syntax Definitions**

- **chassis**: The chassis identifier.
- **slot/port[-port2]**: The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
- **agg_id[-agg_id2]**: The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
- **dcp_id**: DCB profile ID. DCB profile ID 11 through 128 refers to the custom profiles. DCB profile ID 1 through 10 refers to the predefined profiles.
- **dcp_name**: DCB profile name.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- When a DCB profile is assigned to a link aggregate, the profile is applied to all the ports associated with the linkagg.
- Avoid configuring different profiles for each port of the link aggregate.
- The command will not work if the link aggregate is associated with 1Gig port. Different combination of ports (10G and 40G) are allowed in a link aggregate.

**Examples**

- `-> qos qsi port 1/11 qsp dcb lossyETS`
- `-> qos qsi port 1/11 qsp dcb 7`

**Release History**

Release 7.3.1; command was introduced.
Related Commands

*show qos qsp dcb* Displays the configured DCB profiles and the traffic classes associated with the DCB profile.

MIB Objects

*alaDcbxPortInstanceEntry*
- *alaDcbxPIAdminDCPId*
- *alaDcbxPIAdminDCPName*
**qos qsi dcb dcbx version**

Selects the version of the DCB Exchange protocol (DCBX) to apply to the specified DCB port.

```
qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} dcb dcbx version {ieee | cee | auto}
```

**Syntax Definitions**

- `chassis` The chassis identifier.
- `slot/port[-port2]` The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
- `agg_id[-agg_id2]` The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
- `ieee` Selects IEEE 802.1Qaz DCBX.
- `cee` Selects Converged Enhanced Ethernet DCBX 1.01.
- `auto` Automatically detects the DCBX version used by the peer switch.

**Defaults**

By default, the DCB port is configured to automatically use the DCBX version detected from the peer.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Initially, the IEEE version of DCBX is run on the port until the switch detects the peer is running the CEE version. At that point, the switch will stop IEEE DCBX and start to run the CEE version.

**Examples**

- `-> qos qsi port 1/10 dcb dcbx version ieee`
- `-> qos qsi port 1/10 dcb dcbx version cee`
- `-> qos qsi port 1/11 dcb dcbx version auto`

**Release History**

Release 7.3.3; command was introduced.
**Related Commands**

- `qos qsi dcb dcbx admin-state` enables or disables DCBX functionality on the port.
- `qos qsi dcb dcbx ets` enables or disables application Type, Length, Value (TLV) transmission on a per-port basis.
- `qos qsi dcb dcbx pfc` enables or disables config-TLV, defense mode, and willing bit for PFC on a per-port basis.
- `show qos qsi dcb dcbx` displays the DCBX configuration and status for the specified port.

**MIB Objects**

- `alaDcbxPortInstanceEntry`
- `alaDcbxPIDCBXVersion`
**qos qsi dcb dcbx admin-state**

Enables or disables DCB exchange protocol (DCBX) functionality on a per port basis.

```
qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} dcb dcbx admin-state {enable | disable}
```

**Syntax Definitions**

- **chassis**: The chassis identifier.
- **slot/port[-port2]**: The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
- **agg_id[-agg_id2]**: The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
- **enable**: Enables the DCBX functionality on the port.
- **disable**: Disables the DCBX functionality on the port.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>dcbx admin-state</td>
<td>enable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

The DCBX admin-state, enables or disables DBCX TLVs and negotiation on a port.

**Examples**

- `-> qos qsi port 1/10 dcb dcbx admin-state enable`
- `-> qos qsi port 1/10 dcb dcbx admin-state disable`

**Release History**

Release 7.3.1; command was introduced.
Related Commands

- `qos qsi dcbl dcbx version`: Selects the version of DCBX to apply to the specified DCB port.
- `qos qsi dcbl dcbx ets`: Enables or disables application Type, Length, Value (TLV) transmission on a per port basis.
- `qos qsi dcbl dcbx pfc`: Enables or disables config-TLV, defense mode, and willing bit for PFC on a per port basis.
- `show qos qsi dcbl dcbx`: Displays the configured ports in the system and the related DCBX information.

MIB Objects

- `alaDcbxPortInstanceEntry`
  - `alaDcbxPIIIfIndex`
  - `alaDcbxPIDCBXAdmin`
**qos qsi dcb dcbx ets**

Enables or disables config-TLV, recommended-TLV, and the willing bit for ETS on a per-port basis.

```
qos qsi {port chassis/slot/port[1-port2] | linkagg agg_id[1-agg_id2]} dcb dcbx ets [config-tlv {enable | disable} | recommend-tlv {enable | disable} | willing {yes | no}]
```

**Syntax Definitions**

- `chassis` The chassis identifier.
- `slot/port[1-port2]` The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
- `agg_id[1-agg_id2]` The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
- `config-tlv enable` Enables the transmission of ETS configuration TLVs.
- `config-tlv disable` Disables the transmission of ETS configuration TLVs.
- `recommend-tlv enable` Enables the transmission of ETS recommended TLVs.
- `recommend-tlv disable` Disables the transmission of ETS recommended TLVs.
- `yes` Sets the willing bit to on in the TLVs.
- `no` Sets the willing bit to off in the TLVs.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>config-tlv {enable</td>
<td>disable}</td>
</tr>
<tr>
<td>ets recommend-tlv {enable</td>
<td>disable}</td>
</tr>
<tr>
<td>willing {yes</td>
<td>no}</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the option `ets config-tlv` to enable or disable the transmission of ETS configuration TLVs. To use this option, DCBX must be enabled on the port.

- Use the option `ets recommended-tlv` to enable or disable the transmission of ETS recommended TLVs. To use this option, DCBX must be enabled on the port.
Use the option **ets willing** to set the willing bit on the TLVs. This option is used when the DCBX is enabled on the port and the ETS configuration TLV is sent on the port.

**Examples**

- `-> qos qsi port 1/1-10 dcb dcbx ets config-tlv disable`
- `-> qos qsi port 1/11 dcb dcbx ets recommended-tlv disable`
- `-> qos qsi linkagg 5 dcb dcbx ets willing no`

**Release History**

Release 7.3.1; command was introduced.

**Related Commands**

  - `lldpXdot1dcbxConfigETSRecommendationTxEnable`
  - `lldpXdot1dcbxLocETSSCOnWilling`
**qos qos dcb dcbx pfc**

Enables or disables config-TLV, defense mode, and willing for PFC on a per port basis.

```
qos qos {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} dcb dcbx pfc [config-tlv {enable | disable} | defense {enable | disable} | willing {yes | no}]
```

---

**Syntax Definitions**

- `chassis` The chassis identifier.
- `slot/port[-port2]` The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
- `agg_id[-agg_id2]` The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
- `config-tlv enable` Enables the transmission of PFC configuration TLVs.
- `config-tlv disable` Disables the transmission of PFC configuration TLVs.
- `defense enable` Enables the defense mode for the PFC.
- `defense disable` Disables the defense mode for the PFC.
- `willing yes` Allows the PFC to negotiate with the network.
- `willing no` Stops the PFC from negotiating with the network.

---

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>pfc config-tlv</td>
<td>enable</td>
</tr>
<tr>
<td>pfc defense</td>
<td>enable</td>
</tr>
<tr>
<td>pfc willing</td>
<td>yes</td>
</tr>
</tbody>
</table>

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

**show qos qsi dcb dcbx**

Displays the DCBX port configuration and status.

```
show qos qsi [port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]] dcb dcbx [status]
```

**Syntax Definitions**

- `chassis` The chassis identifier.
- `slot/port[-port2]` The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
- `agg_id[-agg_id2]` A link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
- `status` Displays the DCBX operational status for the port.

**Defaults**

By default, the DCBX configuration is displayed for all ports.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

show qos qsi dcb ets

Displays the configured ports in the system and the related DCBX ETS and ETS traffic class information.

`show qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} dcb ets [tc [tc_num]]`

**Syntax Definitions**

- `chassis`: The chassis identifier.
- `slot/port[-port2]`: The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
- `agg_id[-agg_id2]`: A link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
- `tc_num`: Enter the traffic class for which the information needs to be displayed. The valid range is 0–7.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

```
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>
```

**Usage Guidelines**

Use the `tc_num` option to display the DCBX ETS information for a specific traffic class.

**Examples**

```
-> show qos qsi port 1/1 dcb ets
Legends: Prio TC Map:
        Represents the priority to traffic class mapping;
        begins with priority 0 on the left and displays the traffic class it belongs to.
        * indicates port oper status is different than the configured status

**show qos qsi dcbx pfc**

Displays the configured ports in the system and the related DCBX PFC information.

**show qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} dcb pfc**

---

**Syntax Definitions**

- **chassis**
  - The chassis identifier.

- **slot/port[-port2]**
  - The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).

- **agg_id[-agg_id2]**
  - A link aggregate ID. Use a hyphen to specify a range of IDs (10-15).

---

**Defaults**

N/A

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

Use the slot/port parameter to clear queue statistics associated with specific ports.

Examples

-> clear qos qsi port 2/1 dcb pfc stats

Release History

Release 7.3.1; command was introduced.

Related Commands

show qos qsi stats Displays the queue statistics for DCB and NDCB ports.

MIB Objects

alaVfcQsetInstanceTable
alaVfcQsetStatsClear
**qos ecnp import ecnp**

Creates a custom Enhanced Congestion Notification (ECN) profile in a non-Data Center Bridging (NDCB) mode.

```
qos ecnp {cust_ecnp_id | cust_ecnp_name} import ecnp {ecnp_id | ecnp_name}
```

```
no qos ecnp {cust_ecnp_id | cust_ecnp_name}
```

---

**Syntax Definitions**

- **cust_ecnp_id**: ECN custom profile ID. The valid custom profile ID range is 2–16.
- **cust_ecnp_name**: The custom ECN profile name.
- **ecnp_id**: The ID of the ECN profile to import. Only ECN profile ID 1 can be used to create a custom profile.
- **ecnp_name**: The name of the ECN profile to import. Only ECNP profile name ecnp-1 can be used to create a custom profile.

---

**Defaults**

N/A

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- Only ECNP profile ID: 1, name: ecnp-1 can be used to create a custom profile.
- Use the **no** form of the command to remove an existing custom ECN profile from the switch configuration.
- A custom ECN profile attached to a port cannot be removed from the switch configuration. In this case, the profile must be disassociated from the port before being removed.
- Ensure no ECN profile is being used by any QSI (Qset Instance) before deleting it. Detach the ECN profile from QSI before deleting it.
- ECN is supported only for IP unicast traffic flows.

---

**Examples**

```
-> qos ecnp 3 import ecnp 1
-> qos ecnp ecnptest import ecnp-1
-> no qos ecnp 3
```
**Release History**

Release 8.7R2; command introduced.

**Related Commands**

- `show qos ecnp` Displays the ECN configuration parameters for a port or a link aggregate.
- `show qos qsi ecn-stats` Displays the ECN statistics of a port or linkagg.

**MIB Objects**

alaVfcECNProfileTable

**qos qsi qp ecn**

Enables or disables ECN functionality for the queue of a port or linkagg.

```
qos qsi {port chassis/slot/port[-port2] | slot slot | linkagg agg_id[-agg_id2]} qp q_num ecn admin-state {enable | disable}
```

### Syntax Definitions

- **chassis**
  - The chassis identifier.

- **slot/port[-port2]**
  - The slot and port number to associate with the QSet. Use a hyphen to specify a range of ports (3/1-10).

- **slot**
  - The slot number.

- **agg_id[-agg_id2]**
  - The link aggregate ID to associate with the QSet. Use a hyphen to specify a range of IDs (10-20).

- **q_num**
  - The queue number. The range is 1–8.

- **enable**
  - Enables the ECNP for the queue.

- **disable**
  - Disables the ECNP for the queue.

### Defaults

</table>

### Usage Guidelines

When enabled, marking of ECT congested packets on the selected egress queue is enabled on the configured port only. ECN can only be activated for lower priority queues 5–8.

### Examples

- `-> qos qsi port 1/1/31 qp 5 ecn admin-state enable`
- `-> qos qsi port 1/1/31 qp 5 ecn admin-state disable`

### Release History

Release 8.7R2; command introduced.
Related Commands

- **show qos ecnp**
  Displays the ECN configuration parameters for a port or a link aggregate.

- **show qos qsi ecn-stats**
  Displays the ECN statistics of a port or link aggregate.

MIB Objects

- `alaVfcQInstanceTable`
- `alaVfcQInstanceECNAadminState`
show qos ecnp

Displays ECN configuration parameters for a port or a link aggregate.

show qos ecnp [ecnp_id | ecnp_name] [detail | port chassis/slot/port[-port2] | slot | linkagg agg_id[-agg_id2]]

**Syntax Definitions**

- **ecnp_id**
  - The ECN profile ID.

- **ecnp_name**
  - The ECN profile name.

- **detail**
  - Displays ECN configuration details for a specific port or a link aggregate.

- **chassis**
  - The chassis identifier.

- **slot/port[-port2]**
  - The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).

- **agg_id[-agg_id2]**
  - The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).

**Defaults**

By default, displays the entire QSI configuration for the switch.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use the **detail** parameter to display additional profile information for all ports and link aggregates.

**Examples**

```plaintext
-> show qos ecnp
ECNP 1 (ecnp-1)
#Ports: 135
  Green
    Min-Th: 50, Max-Th: 100, Max-Pb: 24, Gain: 9

-> show qos ecnp detail port 1/1/31A
Port 1/1/31A
  QSAP: Port 1/1/31A, Parent: Port 1/1/31A,
  ECNP: 1, Name: ecnp-1
  QSI Port 1/1/31A
    QSP: 1, Name: qsp-sp
```
QoS Commands

output definitions

ECNP
  The ECN profile (ECNP) ID and name.
#Ports
  The number of ports to which this profile is attached
Min-Th
  The minimum queue threshold for packets.
Max-Th
  The maximum queue threshold for packets.
Max-Pb
  The maximum drop probability percentage for packets.
Gain
  The queue gain (a numeric value used to determine the instantaneous average queue length)
Port/Linkagg
  The physical slot and port number (or link aggregate ID for a logical port)
QSAP
  The QSet Attachment Point (QSAP). This is a logical entity used internally by the switch to identify the association between a QSet instance and a port or link aggregate.
**output definitions (continued)**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>

- `alaVfcECNProfileMaxThreshold`
- `alaVfcECNProfileMinThreshold`
- `alaVfcECNProfileRowStatus`
This chapter describes the CLI commands used for policy management in the switch. The Quality of Service (QoS) software in the switch uses policy rules for classifying incoming flows and deciding how to treat outgoing flows. A policy rule is made up of a policy condition and a policy action. Policy rules may be created on the switch through CLI or SNMP commands, or they may be created through the PolicyView GUI application on an attached LDAP server.

Rules created through PolicyView cannot be modified through the CLI; however, you can create policies in the CLI that take precedence over policies created through PolicyView.

Refer to Chapter 36, “QoS Commands,” for information about commands used to configure QoS software.

MIB information for the QoS policy commands is as follows:

<table>
<thead>
<tr>
<th>Filename</th>
<th>ALCATEL-INDI-QOS-MIB.mib</th>
</tr>
</thead>
<tbody>
<tr>
<td>Module</td>
<td>alaQoSMIB</td>
</tr>
</tbody>
</table>

Some of the commands listed here are not currently supported on one or more platforms. See command descriptions in this chapter and check release notes for information about commands that are not supported.

The QoS Policy commands are listed here:

### Policy commands
- policy rule
-  ict message-type priority
- policy list
- policy list rules
- policy condition
- policy action
- show policy action
- show policy condition
- show active policy rule
- show policy rule
- show policy validity period
- show active policy list
- show policy list
- show policy ipv4-summary
- show policy ipv6-summary

### Group commands
- policy network group
- policy service
- policy service group
- policy mac group
- policy port group
- policy map group
- show policy network group
- show policy mac group
- show policy port group
- show policy map group
- show policy service
- show policy service group

Types of policies are generally determined by the kind of traffic they classify (policy conditions) and how the policy is enforced (policy actions). Commands used for particular types of policies are listed here. See the *OmniSwitch AOS Release 8 Network Configuration Guide* for more information about creating these types of policies and information about valid condition/action combinations.

policy rule

Configures a policy rule on the switch. A rule is made up of a condition (for classifying incoming traffic) and an action (to be applied to outgoing traffic).

```
policy rule rule_name [enable | disable] [precedence precedence] [condition condition] [action action] [validity-period name] [save] [log [log-interval seconds]] [count {packets | bytes}] [trap] [default-list]
policy rule rule_name no {validity-period | save | log | trap | default-list}
no policy rule rule_name
```

Syntax Definitions

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>rule_name</code></td>
<td>The name of the policy rule, any alphanumeric string.</td>
</tr>
<tr>
<td><code>enable</code></td>
<td>Enables the policy rule.</td>
</tr>
<tr>
<td><code>disable</code></td>
<td>Disables the policy rule.</td>
</tr>
<tr>
<td><code>precedence</code></td>
<td>The precedence value in the range 0–65535. This value determines the order in which rules</td>
</tr>
<tr>
<td></td>
<td>are searched for a matching condition. A higher number indicates higher precedence. Typically</td>
</tr>
<tr>

</tr>
</tbody>
</table>

Usage Guidelines

- Any rule configured through this command is not active on the switch until the qos apply command is issued.

- A policy rule configured through the PolicyView application may not be edited in the CLI. You may, however, create a rule using the CLI with a higher precedence that will override a rule created through PolicyView.

- Use the no form of the command to remove the rule from the configuration or to remove parameters from a particular rule. The change will not take effect, however, until the qos apply command is issued.

- Only one validity period is associated with a policy rule. Each time this command is entered with a validity period name specified, the existing period name is overwritten with the new one.

- Software and hardware resources are allocated for rules associated with a validity period even if the validity period is not active. Pre-allocating the resources makes sure the rule can be enforced when the validity period becomes active.

- The save option marks the policy rule so that the rule will be captured in an ASCII text file (using the configuration snapshot command), saved to the working directory after the write memory command or copy running-config working command is entered, or saved after a reboot. Rules are saved by default. If no save is entered for the rule, the policy rule will not be written to the configuration. The save option should be disabled only if you want to use a policy rule temporarily.

- The default-list option adds the rule to the default policy list. Rules are added to this list by default when the rule is created. A rule can belong to multiple policy lists. As a result, the rule remains a
member of the default list even when it is subsequently assigned to additional lists. Consider the following recommendations regarding the default policy list:

- If the rule is going to belong to a QoS policy list for a Universal Network Profile (UNP), use the `no default-list` option when creating the rule. Doing so will give the rule precedence over default list rules when the policy list is applied to UNP device traffic.

- Note that each time a rule is assigned to a policy list, an instance of that rule is created and each instance is allocated system resources. Use the `no default-list` option with this command to exclude the rule from the default policy list.

- When creating a policy rule with a destination port condition on an OmniSwitch 9900, specify the `no default-list` option to ensure that this type of condition is supported on the OmniSwitch 9900. See the `policy condition destination port` command.

- The `log` option is useful for determining the source of attacks on the switch firewall.

- The `log` option is not supported for service domain traffic.

- If traps are enabled for the rule, a trap is only sent when a port disable action or UserPort shutdown operation is triggered.

- If the `configuration snapshot` command is entered after the `policy rule` command is configured, the resulting ASCII file will include the following additional syntax for the `policy rule` command:

  ```
  from {cli | ldap | blt}
  ```

  This syntax indicates how the rule was created. The `cli` and `ldap` options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The `blt` option indicates a built-in rule, this setting is not configurable.

**Examples**

- `> policy rule rule2 condition c2 action a2`
- `> policy rule rule3 condition c3 action a3 no default-list`
- `> policy rule rule2 precedence 65535`
- `> policy rule rule2 validity-period vp01`
- `> policy rule rule2 no precedence`
- `> policy rule rule2 no validity-period`
- `> policy rule rule3 no default-list`
- `> no policy rule rule2`

**Release History**

Release 7.1.1; command was introduced.
Release 8.8R2; `trap` keyword deprecated.
Related Commands

**iec message-type priority**
- Configures a validity period that specifies days, times, and/or months during which an associated policy rule is in effect.

**policy condition**
- Configures condition parameters.

**policy action**
- Configures action parameters.

**qos apply**
- Applies configured QoS and policy settings to the current configuration.

**show policy rule**
- Displays information for policy rules configured on the switch.

**show active policy rule**
- Displays only those policy rules that are currently being enforced on the switch.

**iec message-type priority**

Configures a QoS priority for the specified IEC 61850 message type. This command runs a python script that programs QoS rules that will apply traffic prioritization to IEC 61850 message packets.

**Syntax Definitions**

- **message**
  The message type for which a QoS rule is configured. Specify one of the supported IEC 61850 message types: goose, gse, sv, ptp, snmp, mms, all.

- **priority string**
  Sets the priority level. The priority string value must be set to one of the following:
  - “high” (maps to QoS priority queue 7)
  - “medium” (maps to QoS priority queue 4)
  - “low” (maps to QoS priority queue 1)
  - “default” (sets the priority to the default value for the message type)

**Defaults**

By default, the priority for all the supported IEC 61850 message type is set to default.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- To set the priority for all message types at once, specify “all” as the message type value.
- A message type can be configured with only one priority.
- Use the “default” option to restore the default priority as shown in the table:

<table>
<thead>
<tr>
<th>Message Type</th>
<th>Default Priority</th>
</tr>
</thead>
<tbody>
<tr>
<td>GOOSE</td>
<td>High</td>
</tr>
<tr>
<td>GSE</td>
<td>Medium</td>
</tr>
<tr>
<td>SV</td>
<td>High</td>
</tr>
<tr>
<td>MMS</td>
<td>Low</td>
</tr>
<tr>
<td>SNTP</td>
<td>Medium</td>
</tr>
<tr>
<td>PTP</td>
<td>Medium</td>
</tr>
</tbody>
</table>
The QoS policy condition, action, and rule names that are used to prioritize IEC 61759 traffic are predefined. The following reserved names must not be used for user policy configuration:
Use the `iec message-type flush` CLI command to remove the prioritization for message type.

**Examples**

- `-> iec message-type goose priority high`
- `-> iec message-type gse priority low`
- `-> iec message-type mms priority medium`
- `-> iec message-type all priority high`

**Release History**

Release 8.7 R1; command was introduced.

**Related Commands**

- `iec message-type flush` Removes the rule applied for the IEC 61850 message priority.
- `iec show` Displays the priority configured for the IEC 61850 message types.

**MIB Objects**

```
N/A
```
**iec message-type flush**

Removes the rule applied for the IEC 61850 message priority.

**Syntax Definitions**

`message` The message type for which rule must be flushed. Specify one of the supported IEC 61850 message types: goose, gse, sv, ptp, sntp, mms, all.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>supported</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- This command runs a python script that programs the QoS rules for traffic prioritization.
- The “all” option flushes the priority rule for all the message types at once.

**Examples**

- `-> iec message-type goose flush`
- `-> iec message-type gse flush`
- `-> iec message-type mms flush`
- `-> iec message-type all flush`

**Release History**

Release 8.7 R1; command was introduced.

**Related Commands**

- `iec message-type priority` Configures IEC 61850 message priority.
- `iec show` Displays the priority configured for the IEC 61850 message types.

**MIB Objects**

N/A
**iec show**

Displays the priority configured for the IEC 61850 message types.

```plaintext
-> iec show
Message Type   Priority
---------------+------------
goose          high
sntp           low
```

**Syntax Definitions**

N/A

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>

**Usage Guidelines**

The output displays only the configured message types.

**Examples**

```plaintext
-> iec show
Message Type   Priority
---------------+------------
goose          high
sntp           low
```

**Release History**

Release 8.7 R1; command was introduced.

**Related Commands**

- `iec message-type priority` Configures IEC 61850 message priority.

**MIB Objects**

N/A
policy validity-period

Configures a validity period that specifies the days and times in which a policy rule is in effect.

\texttt{policy validity-period name [days \texttt{days}] [months \texttt{months}] [hours \texttt{hh:mm to hh:mm}] [interval mm:dd:yy \texttt{hh:mm to mm:dd:yy hh:mm}]}

\texttt{policy validity-period name no \{hours | interval\}}

\texttt{no policy validity-period name}

\subsection*{Syntax Definitions}

\begin{itemize}
  \item \texttt{name} The name of the validity period (up to 31 alphanumeric characters).
  \item \texttt{days} The day(s) of the week this validity period is active. Enter the actual day of the week (e.g., \texttt{monday}, \texttt{tuesday}, \texttt{wednesday}, etc.).
  \item \texttt{months} The month(s) in which the validity period is active. Enter the actual month (e.g., \texttt{january}, \texttt{february}, \texttt{march}, etc.).
  \item \texttt{hh:mm} The time of day, specified in hours and minutes, the validity period starts and the time of day the validity period ends (e.g., 10:30 to 11:30).
  \item \texttt{mm:dd:yy hh:mm} An interval of time during which a rule is in effect. Specify a start and end to the interval period by entering a beginning date and time followed by an end date and time (e.g., 11:01:17 12:01 to 11:02:17 12:01).
\end{itemize}

\subsection*{Defaults}

By default, no validity period is in effect for a policy rule.

\begin{table}[h]
\centering
\begin{tabular}{l l}
\textbf{Parameter} & \textbf{Default} \\
\hline
\texttt{days} & no restriction \\
\texttt{months} & no restriction \\
\texttt{hh:mm} & no specific time \\
\texttt{mm:dd:yyyy hh:mm} & no interval \\
\end{tabular}
\end{table}

\subsection*{Platforms Supported}

This command is supported on the following OmniSwitch platforms:

\begin{table}[h]
\centering
\begin{tabular}{|c|c|c|c|c|c|c|c|c|c|}
\hline
\hline
Yes & Yes & Yes & Yes & Yes & Yes & Yes & Yes & Yes & Yes & Yes \\
\hline
\end{tabular}
\end{table}
**Usage Guidelines**

- Use the **no** form of the command to remove a validity period from the configuration, or to remove parameters from a particular validity period. Note that at least one parameter must be associated with a validity period.

- Any combination of days, months, hours, and interval parameters is allowed. The validity period is only in effect when all specified parameters are true.

- Use the **policy rule** command to associate a validity period with a rule.

- Software and hardware resources are allocated for rules associated with a validity period even if the validity period is not active. Pre-allocating the resources makes sure the rule can be enforced when the validity period becomes active.

- If the **configuration snapshot** command is entered after the **policy validity-period** command is configured, the resulting ASCII file will include the following additional syntax for the **policy validity-period** command:

  from {cli | ldap | blt}

  This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

**Examples**

```bash
-> policy validity-period vp01 days tuesday thursday months january february
-> policy validity-period vp01 hours 13:00 to 19:00
-> policy validity-period vp02 interval 01/01/05 12:01 to 02/01/05 11:59
-> policy validity-period vp01 no days thursday
-> no policy-validity period vp02
```

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- **policy rule**: Configures a policy rule on the switch and optionally associates that rule with a validity period.

- **show policy validity period**: Displays information about policy validity periods.

alaQoSAppliedValidityPeriodEndInterval
**policy list**

Configures a QoS policy list. There are four types of lists available: a Universal Network Profile (UNP) policy list, an egress policy list, an Application Fingerprinting policy list, and a default policy list.

```
policy list list_name type {unp | egress | appfp | empacl} [enable | disable]
nopolicy list list_name
```

### Syntax Definitions

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>list_name</code></td>
<td>The name to assign to the policy list. Note that the list name is case sensitive.</td>
</tr>
<tr>
<td><code>unp</code></td>
<td>Applies the list of policy rules to traffic classified into the User Network Profile to which the list is assigned.</td>
</tr>
<tr>
<td><code>egress</code></td>
<td>Applies the list of policy rules to traffic egressing on switch ports. <em>This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, and OmniSwitch 6570M.</em></td>
</tr>
<tr>
<td><code>appfp</code></td>
<td>Applies the list of policy rules to an Application Fingerprinting interface. <em>This parameter is supported only on the OmniSwitch 6900.</em></td>
</tr>
<tr>
<td><code>empacl</code></td>
<td><em>This parameter is not supported.</em></td>
</tr>
<tr>
<td><code>enable</code></td>
<td>Enables the policy list.</td>
</tr>
<tr>
<td><code>disable</code></td>
<td>Disables the policy list.</td>
</tr>
</tbody>
</table>

### Defaults

A default policy list is available when the switch boots up; all policy rules belong to this list unless otherwise specified (see the `policy list rules` and `policy rule` commands for more information).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>enable</code></td>
<td><code>enable</code></td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of the command to remove a policy list from the configuration.
- Once a policy list is created, use the `policy list rules` command to add rules to the list.
• Any policy list configured through this command is not active on the switch until the `qos apply` command is issued.

• If the `configuration snapshot` command is entered after the `policy list` command is configured, the resulting ASCII file will include the following additional syntax for the `policy list` command:

`from {cli | ldap | blt}`

This syntax indicates how the list was created. The `cli` and `ldap` options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The `blt` option indicates a built-in object, this setting is not configurable.

**Examples**

```- policy list unp1 type unp
- policy list unp1 disable
- policy list unp1 enable
- no policy list unp1```

**Release History**

Release 7.2.1; command was introduced.
Release 8.4.1; `egress` parameter added.

**Related Commands**

- `policy list rules` Assigns QoS policy rules to a QoS policy list.
- `policy rule` Configures a policy rule on the switch and optionally associates that rule with a validity period.
- `show policy rule` Displays information for policy rules configured on the switch.
- `show active policy list` Displays only those policy lists that are currently being enforced on the switch.
- `show policy list` Displays information for policy lists configured on the switch.

**MIB Objects**

alaQoSRuleGroupsTable
  - `alaQoSRuleDefaultList`  
  - `alaQoSRuleGroupsName`

  - `alaQoSRuleGroupsEnabled`  
  - `alaQoSRuleGroupsStatus`  

alaQosAppliedRuleGroupsTable
  - `alaQosAppliedRuleGroupsName`  
  - `alaQosAppliedRuleGroupsSource`  
  - `alaQosAppliedGroupsType`  
  - `alaQosAppliedGroupsEnabled`  
  - `alaQosAppliedRuleGroupsStatus`
policy list rules

Assigns existing QoS policy rules to the specified QoS policy list.

`policy list list_name rules rule_name [rule_name2...]`

`policy list list_name no rules rule_name [rule_name2...]`

**Syntax Definitions**

- **list_name**
  The name of an existing QoS policy list. Note that the list name is case sensitive.

- **rule_name**
  The name of an existing QoS policy rule to include in the policy list.

- **rule_name2**
  Optional. The name of another QoS policy rule to include in the policy list. Separate each rule name specified with a space.

**Defaults**

A default policy list is available when the switch boots up. This list has no name and is not configurable. All QoS policy rules are assigned to the default list unless the `no default-list` option of the `policy rule` command is used.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of the command to remove a policy rule from an existing list.

- The QoS policy list and rule names specified with this command must already exist in the switch configuration.

- A rule may belong to a Universal Network Profile (UNP) list, the default list, and an egress policy list at the same time. By default, a rule is assigned to a default policy list when the rule is created. If the rule is subsequently assigned to another policy list, it still remains associated with the default list.

- If a rule is a member of multiple policy lists but one or more of these lists are disabled, the rule is still active in those lists that are enabled.

- If the QoS status of a policy rule is disabled, then the rule is disabled for all lists even if a list to which the policy rule belongs is enabled.

- If a policy rule is going to be assigned to a UNP policy list, make sure the rule was created using the `no default-list` option of the `policy rule` command. This will ensure that the rule will take precedence over other default list rules when the UNP policy list is applied to device traffic.
A QoS policy list that is assigned to an Application Fingerprinting interface must contain policy rules with the `appfp-group` condition.

- Only those rules that are assigned to an egress policy list are applied to egress traffic. When configuring egress policy lists, consider the following:
  - Egress policy lists are not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560 and OmniSwitch 6570M.
  - Only one egress policy list per switch is supported, to which IPv4 and IPv6 rules can be added.
  - Applying egress policy lists to SPB or VXLAN SAP ports is not supported.
  - Only the following policy conditions and actions are supported when creating rules for an egress policy list:

<table>
<thead>
<tr>
<th>policy conditions</th>
<th>policy actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Destination port</td>
<td>Disposition (drop/accept)</td>
</tr>
<tr>
<td>Destination VLAN</td>
<td></td>
</tr>
<tr>
<td>Source IPv4 address</td>
<td></td>
</tr>
<tr>
<td>Source IPv6 address</td>
<td></td>
</tr>
<tr>
<td>IPv6 (qualifier for traffic types)</td>
<td></td>
</tr>
</tbody>
</table>

- On an OmniSwitch 9900, a destination port condition is supported only when the condition is part of a policy rule that was configured using the `no default-list` option (for example, `policy rule r1 condition c1 action a1 no default-list`). See the `policy condition destination port` command.

- Using policy lists that contain rules with a source port condition are not supported when applied to 10G ports on an OmniSwitch 6560 and OmniSwitch 6570M.

- On the OmniSwitch 6360 and OmniSwitch 6465, policy rules containing the following conditions are not supported in a UNP policy list:
  - Source port group
  - Source IPv6 address
  - IPv6 flow label
  - Source MAC/MAC group
  - Destination MAC/MAC group
  - Ethertype for IPV6

- On the OmniSwitch 6360, OmniSwitch 6560, OmniSwitch 6570M and OmniSwitch 9900, only policy rules with the following conditions can be assigned to a UNP policy list:
  - Destination MAC
  - EtherType
  - Source VLAN
  - SIP
  - DIP / DIPv6
  - Layer 4 Protocol
  - Layer 4 source port
  - Layer 4 destination port
  - Source port

- Any policy list configured through this command is not active on the switch until the `qos apply` command is issued.
Examples

-> policy list unp1 rules r1 r2 r3
-> policy list unp1 no rules r2

Release History

Release 7.2.1; command was introduced.

Related Commands

policy network group

Configures a network group name and its associated IP addresses. The group may be used as part of a policy condition. The action associated with any policy using the condition will be applied to all members of the network group.

```
policy network group net_group ip_address [mask net_mask] [ip_address2 [mask net_mask2]...]
no policy network group net_group
policy network group net_group no ip_address [mask netmask] [ip_address2 [mask net_mask2]...]
```

Syntax Definitions

- **net_group**: The name of the network group (up to 31 alphanumeric characters).
- **ip_address**: An IPv4 or IPv6 address included in the network group.
- **net_mask**: The mask for the IPv4 or IPv6 address. If no mask is entered, the address is assumed to be a host address.
- **ip_address2**: Optional. Another IPv4 or IPv6 address to be included in the network group. Multiple IP addresses may be configured for a network group. Separate each address/mask combination with a space.
- **net_mask2**: Optional mask for the IPv4 or IPv6 address. If no mask is entered, the natural mask for the address will be used.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use this command to configure a group of IP addresses to which you want to apply QoS rules. Rather than create a condition for each IP address, group the addresses together. Use the policy condition command to associate a condition with the network group.

- Use the no form of the command to remove a network group from the configuration, or to remove an IP address from a network group.
If the configuration snapshot command is entered after the policy network group command is configured, the resulting ASCII file will include the following additional syntax for the policy network group command:

```
from {cli | ldap | blt}
```

This syntax indicates how the network group was created. The cli and ldap options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The blt option indicates a built-in network group, this setting is not configurable.

**Examples**

```
-> policy network group webgroup1 10.10.12.5 10.50.3.1
-> policy network group webgroup1 no 10.10.12.5
-> no policy network group webgroup1

-> policy network group webgroup2 no 2002:c633:6489::35
-> no policy network group webgroup2
```

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- **policy condition**: Configures a policy condition. A network group may be configured as part of a policy condition.
- **qos apply**: Applies configured QoS and policy settings to the current configuration.
- **show policy network group**: Displays information for policy network groups.

**MIB Objects**

  - `alaQoSNetworkGroupsIpMask`
- `alaQoSAppliedNetworkGroupTable`
  - `alaQoSAppliedNetworkGroupIpAddr`
  - `alaQoSAppliedNetworkGroupsIpMask`
**policy service group**

Configures a service group and its associated services. The group may be used as part of a policy condition. The action associated with any policy using the condition will be applied to all members of the service group.

```
policy service group service_group service_name1 [service_name2...]
no policy service group service_group
policy service group service_group no service_name1 [service_name2...]
```

### Syntax Definitions

- **service_group**
  - The name of the service group (up to 31 alphanumeric characters).

- **service_name1**
  - The service name is configured through the `policy service` command and includes information about protocol, source port, and destination port.

- **service_name2...**
  - Optional. Additional service names may be configured for a service group. Separate each service name with a space.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use this command to configure a group of services to which you want to apply QoS rules. Rather than create a condition for each service, group services together. Use the `policy condition` command to associate a condition with the service group.

- Use the `no` form of the command to remove a service group from the configuration, or to remove a service from a service group.

- To drop packets destined to specific TCP and UDP ports, create port services for the traffic that you want dropped and add these services to a service group. Then create a condition for this service group and a source port group, which can then be used in a deny rule. Refer to the *OmniSwitch AOS Release 8 Network Configuration Guide* for more information about ACL security enhancements.
If the configuration snapshot command is entered after the policy service group command is configured, the resulting ASCII file will include the following additional syntax for the policy service group command:

from {cli | ldap | blt}

This syntax indicates how the service group was created. The cli and ldap options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The blt option indicates a built-in service group, this setting is not configurable.

Examples

-> policy service group servgroup2 telnet ftp
-> policy service group servgroup2 no telnet
-> no policy service group servgroup2

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply  Applies configured QoS and policy settings to the current configuration.
policy service  Configures a service that may be used as part of a policy service group.

**policy mac group**

Configures a MAC group and its associated MAC addresses. The group may be used as part of a policy condition. The action associated with any policy using the condition will be applied to all members of the MAC group.

```plaintext
policy mac group mac_group mac_address [mask mac_mask] [mac_address2 [mask mac_mask2]...]
no policy mac group mac_group
policy mac group mac_group no mac_address [mask mac_mask] [mac_address2 [mask mac_mask2]...]
```

---

**Syntax Definitions**

- `mac_group` The name of the MAC group (up to 31 alphanumeric characters).
- `mac_address` The MAC address associated with the group (for example, 00:20:da:05:f6:23).
- `mac_mask` The mask of the MAC address, used to identify which bytes in the MAC address are significant when comparing the MAC address in the received frame with the MAC address in the policy condition. If no mask is specified, the switch automatically uses ff:ff:ff:ff:ff:ff.
- `mac_address2` Optional. Additional MAC addresses may be configured for a MAC group. Separate each address with a space.
- `mac_mask2` The mask of an additional MAC address, used to identify which bytes in the MAC address are significant when comparing the MAC address in the received frame with the MAC address in the policy condition. If no mask is specified, the switch automatically uses ff:ff:ff:ff:ff:ff.

---

**Defaults**

N/A

---

**Platforms Supported**

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- Use this command to configure a group of source or destination MAC addresses to which you want to apply QoS rules. Rather than create a condition for each MAC address, group MAC addresses together. Use the `policy condition` command to associate a condition with the MAC group.
- Use the `no` form of the command to remove a MAC group from the configuration, or to remove a MAC address from a MAC group.
- The MAC group name “alaPhones” is a reserved group name used to identify the MAC addresses of IP phones. See the `qos phones` command for more information.

- If the `configuration snapshot` command is entered after the `policy map group` command is configured, the resulting ASCII file will include the following additional syntax for the `policy map group` command:

  ```
  from {cli | ldap | blt}
  ```

  This syntax indicates how the map group was created. The `cli` and `ldap` options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The `blt` option indicates a built-in object, this setting is not configurable.

**Examples**

```bash
-> policy mac group mac_group1 00:20:da:05:f6:23 00:20:da:05:f6:24
-> no policy mac group mac_group1
```

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `policy condition`: Configures a policy condition. A MAC group may be configured as part of a policy condition.
- `qos apply`: Applies configured QoS and policy settings to the current configuration.
- `show policy mac group`: Displays information about policy MAC groups.

**MIB Objects**

- `alaQoSMACGroupsTable`

  - `alaQoSMACGroupMacMask`
- `alaQoSAppliedMACGroupTable`
  - `alaQoSAppliedMACGroupMacAddr`
  - `alaQoSAppliedMACGroupMacMask`
**policy port group**

Configures a port group and its associated slot and port numbers. A port group may be attached to a policy condition. The action associated with that policy will be applied to all members of the port group.

```
policy port group group_name {chassis//slot/port[-port2] | agg_id[-agg_id2]} [chassis//slot/port[-port2] | agg_id[-agg_id2]]
```

```
no policy port group group_name
```

```
policy port group group_name no {chassis//slot/port[-port2] | agg_id[-agg_id2]} [chassis//slot/port[-port2] | agg_id[-agg_id2]]
```

**Syntax Definitions**

- **group_name**: The name of the port group (up to 31 alphanumeric characters).
- **chassis**: The chassis identifier.
- **slot/port[-port2]**: The slot and port (or port range) to be included in the group. At least one slot/port combination must be specified. Additional combinations may be included in the group; each combination should be separated by a space.
- **agg_id[-agg_id2]**: A link aggregate ID to be included in the group. Use a hyphen to specify a range of IDs (10-15). Additional combinations may be included in the group; each combination should be separated by a space.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use this command to configure a group of ports or link aggregates to which you want to apply QoS rules. Rather than create a condition for each port, group ports together. Use the **policy condition** command to associate a condition with the port group.

- Configuring ports and link aggregates in the same port group is allowed.

- Adding link aggregate member ports to a QoS port group is not recommended; doing so may cause undesired results when the port group is used in a QoS policy, particularly if only a subset of member ports is added to the port group.
• Use the `no` form of the command to remove a port group from the configuration, or to remove a slot/port from a port group.

• If a range of ports is specified using the syntax `chassis/slot/port-port2` (that is, 1/2/1-8), a single port within that range cannot be removed on its own. The entire range must be deleted as it was entered.

• If a range of link aggregates is specified using the syntax `agg_id1-agg_id2` (that is, 10-15), a single aggregate within that range cannot be removed on its own. The entire range must be deleted as it was entered.

• When a port group is used as part of a policy rule and a policy action specifies a maximum bandwidth, each interface in the port group will be allowed the maximum bandwidth.

• To prevent IP source address spoofing, add ports to the port group called `UserPorts`. `UserPorts` name is case sensitive. This port group does not need to be used in a condition or rule to be effected on flows and applies to both VLAN domain and service domain for both bridged and routed traffic. Ports added to the `UserPorts` group will block spoofed traffic while still allowing normal traffic on the port. Refer to the `OmniSwitch AOS Release 8 Network Configuration Guide` for more information about ACL security enhancements.

• Anti-spoofing on service is supported only on SPB SAP ports and is supported on OmniSwitch 6860N, and OmniSwitch 6900 X48C6/T48C6/X48C4E/V48C8/C32E/T24C2/X24C2 where inline routing is supported.

• Link aggregate addition is not supported in QoS `UserPorts` port group.

• Use the `qos user-port` command to configure the option to filter or administratively disable a port when a specific type of traffic (Spoof, RIP, BPDU, OSPF, and/or BGP) is received on a port that is a member of the pre-defined `UserPorts` group.

• If the `configuration snapshot` command is entered after the `policy port group` command is configured, the resulting ASCII file will include the following additional syntax for the `policy port group` command:

```plaintext
from {cli | ldap | blt}
```

This syntax indicates how the port group was created. The `cli` and `ldap` options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The `blt` option indicates a built-in object, this setting is not configurable.

### Examples

```plaintext
-> policy port group port_group4 3/1/1-2 4/3/1 5/4/1
-> policy port group port_group4 no 3/1/1-2
-> policy port group UserPorts 4/1/1-8 5/1/1-8
```

### Release History

Release 7.1.1; command was introduced.
Release 8.3.1; `agg_id` parameter added.
Related Commands

**policy condition**
Configures a policy condition. A port group may be configured as part of a policy condition.

**qos apply**
Applies configured QoS and policy settings to the current configuration.

**policy action maximum bandwidth**
Configures a maximum bandwidth value for a policy action.

**show policy port group**
Displays information about policy port groups.

MIB Objects

alaQoSPortGroupsTable
- alaQoSPortGroupsName
- alaQoSPortGroupSlot
- alaQoSPortGroupPort

alaQoSAppliedPortGroupsTable
- alaQoSAppliedPortGroupsName
- alaQoSAppliedPortGroupSlot
- alaQoSAppliedPortGroupPort
- alaQoSAppliedPortGroupPortEnd
**policy map group**

Configures a map group and its associated mappings for 802.1p, Type of Service (ToS), or Differentiated Services Code Point (DSCP) values. A map group may be referenced in a policy action with the `map` keyword.

```
policy map group map_group {value1:value2...}
no policy map group map_group
policy map group no {value1:value2...}
```

**Syntax Definitions**

- `map_group`  
  The name of the map group (up to 31 alphanumeric characters).

- `value1`  
  The 802.1p, ToS, or DSCP value to be mapped to another value. May be a value or a range of values (for example, 1-2).

- `value2...`  
  The 802.1p, ToS, or DSCP value to be used in place of `value1`. Additional mapping pairs may be included.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove a mapping pair or to remove the map group entirely.

- The map group may contain more than one mapping pair.

- If the `configuration snapshot` command is entered after the `policy map group` command is configured, the resulting ASCII file will include the following additional syntax for the `policy map group` command:

  ```
  from {cli | ldap | blt}
  ```

  This syntax indicates how the map group was created. The `cli` and `ldap` options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The `blt` option indicates a built-in object, this setting is not configurable.
Examples
- `policy map group tosGroup 1-4:3 5-6:5 7:6`
- `policy map group tosGroup no 7:6`
- `no policy map group tosGroup`

Release History
Release 7.1.1; command was introduced.

```
**policy service**

Configures a service that may be used as part of a policy service group or included as part of a policy condition. A service is a source and/or destination TCP or UDP port or port range.

This overview section describes the base command. *At least one option must be configured with the base command.* Some options may be used in combination; some options are shortcuts for keyword combinations (see the Usage Guidelines). Options are described as separate commands. See the command descriptions and usage guidelines for valid combinations.

Use the **no** form for keywords to remove a parameter from a service.

```
policy service service_name
  [protocol protocol]
  [source ip-port port[-port]]
  [destination ip-port port[-port]]
  [source tcp-port port[-port]]
  [destination tcp-port port[-port]]
  [source udp-port port[-port]]
  [destination udp-port port[-port]]

no policy service service_name
```

**Syntax Definitions**

- `service_name`: The name of the service (up to 31 alphanumeric characters).
- `protocol`: The protocol associated with the service. The range of values is 0–255. Currently a value of 6 (for TCP) or 17 (for UDP) is supported. This value must be specified for `source ip-port` or `destination ip-port`; it cannot be specified for `source tcp-port`, `destination tcp-port`, `source udp-port`, or `destination udp-port`.
- `port`: The well-known port number (or port range) for the desired service. For example, the port number for Telnet is 23. Specify a range of ports using a hyphen (for example, 22-23).

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>6900</th>
<th>6900</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>
Usage Guidelines

- Use the `no` form of the command to remove a service from the configuration, or to remove parameters from a particular service. Note that at least one parameter must be associated with a service.

- The command options offer alternate ways of configuring TCP or UDP ports for a service. Note that port types (TCP or UDP) cannot be mixed in the same service. The following table shows how the keywords are used:

<table>
<thead>
<tr>
<th>To configure:</th>
<th>Use keywords:</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>TCP or UDP ports for a service</td>
<td>protocol source ip-port destination ip-port</td>
<td>The protocol must be specified with at least one source or destination port.</td>
</tr>
<tr>
<td>TCP ports for a service</td>
<td>source tcp-port destination tcp-port</td>
<td>Keywords may be used in combination.</td>
</tr>
<tr>
<td>UDP ports for a service</td>
<td>source udp-port destination udp-port</td>
<td>Keywords may be used in combination.</td>
</tr>
</tbody>
</table>

- If the `configuration snapshot` command is entered after the `policy service` command is configured, the resulting ASCII file will include the following additional syntax for the `policy service` command:

  `from {cli | ldap | blt}`

  This syntax indicates how the service was created. The `cli` and `ldap` options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The `blt` option indicates a built-in object, this setting is not configurable.

Examples

The following two commands show two different ways of configuring the same service:

  -> policy service telnet2 protocol 6 destination ip-port 23
  -> policy service telnet3 destination tcp-port 23

Release History

Release 7.1.1; command was introduced.

Related Commands

- `policy service group`: Configures a policy service group, which is made up of policy services.
- `policy condition`: Creates a policy condition.
- `qos apply`: Applies configured QoS and policy settings to the current configuration.
- `show policy service`: Displays information about policy services configured on the switch.

policy service protocol

Configures a service with a protocol and IP port or port range that may be used as part of a policy service group or included as part of a policy condition.

```
policy service service_name protocol protocol {[source ip-port port[-port]] [destination ip-port port[-port]]}
```

```
no policy service service_name
```

```
policy service service_name no {source ip-port | destination ip-port}
```

Syntax Definitions

- **service_name**: The name of the service (up to 31 alphanumeric characters).
- **protocol**: The protocol associated with the service. The range of values is 0–255. Currently a value of 6 (for TCP) or 17 (for UDP) is supported.
- **port**: The well-known port number (or port range) for the desired service. For example, the port number for Telnet is 23. A port range should be separated by a hyphen (for example, 22-23).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the **no** form of the command to remove a service from the configuration or to remove parameters from a particular service. (A protocol value cannot be removed from a service.)

- Shortcut commands for the **policy service protocol** command include the following: **policy service source tcp-port**, **policy service destination tcp-port**, **policy service source udp-port**, and **policy service destination udp-port**.

- If the **configuration snapshot** command is entered after the **policy service** command is configured, the resulting ASCII file will include the following additional syntax for the **policy service** command:

```
from {cli | ldap | blt}
```

This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.
Examples

-> policy service telnet2 protocol 6 destination ip-port 23 source ip-port 22
-> policy service telnet2 no source ip-port

policy service source tcp-port

Configures a service with a source TCP port or port range that may be used as part of a policy service group or included as part of a policy condition.

\textbf{policy service service\_name source tcp-port port[-port]}\textbf{no policy service service\_name}

\textbf{policy service service\_name no source tcp-port}

\underline{Syntax Definitions}

\begin{itemize}
  \item \textit{service\_name} \hfill The name of the service (up to 31 alphanumeric characters).
  \item \textit{port} \hfill The well-known port number (or port range) for the desired TCP service. For example, the port number for Telnet is 23. A port range should be separated by a hyphen (for example, 22-23).
\end{itemize}

\underline{Defaults}

N/A

\underline{Platforms Supported}

This command is supported on the following OmniSwitch platforms:

\begin{tabular}{|c|c|c|c|c|c|c|c|c|c|}
\hline
\hline
Yes & Yes & Yes & Yes & Yes & Yes & Yes & Yes & Yes & Yes & Yes \\
\hline
\end{tabular}

\underline{Usage Guidelines}

- This command is a shortcut for the \textbf{policy service protocol} command.
- Use the \textbf{no} form of the command to remove a service from the configuration, or to remove parameters from a particular service. Note that at least one parameter must be associated with a service.
- Ports associated with a particular service must all be of the same type. (The \textit{destination tcp-port} keyword may be used with this command; other keywords for the command are not allowed.)
- If the \textbf{configuration snapshot} command is entered after the \textbf{policy service} command is configured, the resulting ASCII file will include the following additional syntax for the \textbf{policy service} command:

\textbf{from \{cli | ldap | blt\}}

This syntax indicates how the service was created. The \textbf{cli} and \textbf{ldap} options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The \textbf{blt} option indicates a built-in object, this setting is not configurable.
QoS Policy Commands

policy service source tcp-port

Examples

-> policy service serv_5 source tcp-port 21-22
-> policy service serv_5 no source tcp-port

  - alaQoSAppliedServiceName
  - alaQoSAppliedServiceSource
  - alaQoSAppliedServiceDestinationUdpPort
  - alaQoSAppliedServiceDestinationUdpPortEnd
policy condition

Creates a QoS policy condition. The condition determines what parameters the switch uses to classify incoming flows. Condition parameters may be configured when the condition is created; or parameters may be configured for an existing condition. At least one parameter must be configured for a condition.

This section describes the base command. Optional keywords are listed below and described as separate commands later in this chapter. (Options may be used in combination but are described separately for ease in explanation.) Use the no form for keywords to remove a parameter from the condition.

Some condition parameters may not be supported depending on the platform you are using. Also some condition parameters may not be supported with some action parameters. See the condition/action tables in the OmniSwitch AOS Release 8 Network Configuration Guide.

```
policy condition condition_name
    [source ip ip_address [mask netmask]]
    [source ipv6 {any | ipv6_address [mask netmask]}]
    [destination ip ip_address [mask netmask]]
    [destination ipv6 {any | ipv6_address [mask netmask]}]
    [multicast ip ip_address [mask netmask]]
    [source network group network_group]
    [destination network group network_group]

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

## Usage Guidelines

- A policy condition and a policy action are combined to make a policy rule. See the **policy rule** command.
- Use the **qos apply** command to activate configuration changes.
- If multiple keywords are defined for a single condition, the traffic flow must match all of the parameters in the condition before the rule is enforced.
- Use the **no** form of the command to remove a condition from a policy rule.
- At least one parameter must be associated with a condition.
- If the **configuration snapshot** command is entered after the **policy condition** command is configured, the resulting ASCII file will include the following additional syntax for the **policy condition** command:

  from {cli | ldap | blt}

This syntax indicates how the condition was created. The **cli** and **ldap** options may be changed by a
user modifying the ASCII file; however, changing this setting is not recommended. The `blt` option indicates a built-in condition, this option is not configurable.

**Examples**

```
-> policy condition cond4 source port 3/1/1
```

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `qos apply`: Applies configured QoS and policy settings to the current configuration.
- `policy action`: Configures a policy action.
- `policy rule`: Configures a policy rule on the switch. A rule is made up of a condition (for classifying incoming traffic) and an action (to be applied to outgoing traffic).
- `show policy condition`: Shows information about policy conditions configured on the switch.

**MIB Objects**

- `alaQoSConditionTable`
  - `alaQoSConditionName`
  - `alaQoSConditionSource`
- `alaQoSAppliedConditionTable`
  - `alaQoSAppliedConditionName`
  - `alaQoSAppliedConditionSource`
**policy condition source ip**

Configures a source IP address for a policy condition.

```
policy condition condition_name source ip {any | ip_address [mask netmask]}
policy condition condition_name no source ip
```

### Syntax Definitions

- `condition_name` - The name of the condition.
- `any` - Any source IPv4 address.
- `ip_address` - The source IP address of the Layer 3 flow.
- `netmask` - The mask for the source IP address.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>netmask</td>
<td>IP address class</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td></td>
</tr>
</tbody>
</table>

### Usage Guidelines

- If a mask is not specified, the IP address is assumed to be a host address.
- A source IP address and a source IP network group cannot be specified in the same condition.
- Use the `no` form of the command to remove a source IP address from a condition; however, at least one classification parameter must be associated with a condition.

### Examples

```
-> policy condition cond3 source ip 173.201.18.3
-> policy condition cond4 source ip any
```

### Release History

Release 7.1.1; command was introduced.
QoS Policy Commands

Related Commands

- **qos apply**
  Applies configured QoS and policy settings to the current configuration.

- **policy condition**
  Creates a policy condition.

- **show policy condition**
  Shows information about a particular policy condition configured on the switch.

MIB Objects

- **alaQoSConditionTable**
  - **alaQoSConditionName**
  - **alaQoSConditionSourceIpAddr**
  - **alaQoSConditionSourceIpMask**

- **alaQoSAppliedConditionTable**
  - **alaQoSAppliedConditionName**
  - **alaQoSAppliedConditionSourceIpAddr**
  - **alaQoSAppliedConditionSourceIpMask**
**policy condition source ipv6**

Configures a source IPv6 address for a policy condition.

```
policy condition condition_name source ipv6 {any | ipv6_address [mask netmask]}
policy condition condition_name no source ipv6
```

### Syntax Definitions

- **condition_name**: The name of the condition.
- **any**: Any source IPv6 address.
- **ipv6_address**: A specific source IPv6 address.
- **netmask**: The mask for the source IPv6 address.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of the command to remove a source IPv6 address from a condition; however, at least one classification parameter must be associated with a condition.
- If a mask is not specified, the IPv6 address is assumed to be a host address.
- On the OmniSwitch 6560, OmniSwitch 6570M and OmniSwitch 9900, a source IPv6 address policy condition is supported only for egress IPv6 ACLs.

### Examples

```
-> policy condition cond3 source ipv6 ::1234:531F:BCD2:F34A
-> policy condition cond4 source ipv6 any
```

### Release History

Release 7.1.1; command was introduced.

policy condition source tcp-port

Configures a source TCP port number for a policy condition.

```
policy condition condition_name source tcp-port port[-port]
```

```
policy condition condition_name no source tcp-port
```

**Syntax Definitions**

- `condition_name` The name of the condition.
- `port` The TCP port number of the source address of the Layer 3 flow, in the range from 0–65535. A range of ports (separated by a hyphen) may be specified instead of a single port.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of the command to remove a source TCP port from a condition; however, at least one classification parameter must be associated with a condition.

- This command is a shortcut for the `policy condition source ip-port` command, which requires that the protocol also be specified. Rather than specifying `source ip-port` and `ip-protocol`, use `source tcp-port`.

- The same condition cannot specify a source TCP port with a service or service group.

- IP port protocol types cannot be mixed in the same condition; ports must be either TCP or UDP.

- Use this condition in combination with the IPv6 condition (`policy condition ipv6`) to configure IPv6 policies for Layer 4 information, services, and service groups.

**Examples**

```
-> policy condition cond3 source tcp-port 137
-> policy condition cond4 ipv6 source tcp-port 21
-> policy condition cond3 no source tcp-port
```
**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- **qos apply**
  Applies configured QoS and policy settings to the current configuration.

- **policy condition ip-protocol**
  Configures an IP protocol for a policy condition.

- **show policy condition**
  Shows information about policy conditions configured on the switch.

```
policy condition condition_name destination tcp-port port[-port]
policy condition condition_name no destination tcp-port
```

### Syntax Definitions

- **condition_name**: The name of the condition.
- **port**: The TCP port number (or port range) of the destination address of the Layer 3 flow, in the range from 0–65535. A range of ports (separated by a hyphen) may be specified instead of a single port.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of the command to remove a destination TCP port from a condition; however, at least one classification parameter must be associated with a condition.

- This command is a shortcut for the `policy condition destination ip-port` command, which requires that the protocol also be specified. Rather than specifying `destination ip-port` and `ip-protocol`, use `destination tcp-port`.

- The same condition cannot specify a destination TCP port with a service or service group.

- IP port protocol types cannot be mixed in the same condition; ports must be either TCP or UDP.

- Use this condition in combination with the IPv6 condition (`policy condition ipv6`) to configure IPv6 policies for Layer 4 information, services, and service groups.

### Examples

```
-> policy condition cond4 destination tcp-port 137-138
-> policy condition cond5 ipv6 destination tcp-port 140
-> policy condition cond4 no destination tcp-port
```
QoS Policy Commands

Release History
Release 7.1.1; command was introduced.

Related Commands
qos apply
Applies configured QoS and policy settings to the current configuration.
policy condition ip-protocol
Configures an IP protocol for a policy condition.

**policy condition source udp-port**

Configures a source UDP port number for a policy condition.

```
policy condition condition_name source udp-port port[-port]
policy condition condition_name no source udp-port
```

### Syntax Definitions

- `condition_name`: The name of the condition.
- `port`: The UDP port number of the source address of the Layer 3 flow, in the range from 0–65535. A range of ports (separated by a hyphen) may be specified instead of a single port.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>

**policy condition ethertype**

Configures an ethertype value to use for traffic classification.

```bash
policy condition condition_name ethertype etype
```

```bash
policy condition condition_name no ethertype
```

**Syntax Definitions**

- `condition_name` - The name of the condition.
- `etype` - The ethertype value, in the range 1536–65535 or 0x600–0xffff hex.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td></td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove **established** from a condition; however, at least one classification parameter must be associated with a condition.
- When an initial TCP connection packet is received only the **syn** flag is set. As a result, TCP packets are only examined if they are not the starting packet.
- Typically this condition is used in combination with **source ip**,** destination ip**,** source port**,** destination port**,** source tcp-port**,** destination tcp-port** conditions.
- Note that even though **established** can be used with most action parameters, it is mainly intended for ACL use.

**Examples**

```
-> policy condition cond2 source ip 192.168.5.10 established
-> policy condition cond3 destination ip 10.255.11.40
```

**Release History**

Release 7.1.1; command was introduced.
Related Commands

- **qos apply**  
  Applies configured QoS and policy settings to the current configuration.

- **policy condition**  
  Creates a policy condition.

- **show policy condition**  
  Shows information about policy conditions configured on the switch.

MIB Objects

- **alaQoSConditionTable**
  - **alaQoSConditionTcpEstablished**

- **alaQoSAppliedConditionTable**
  - **alaQoSAppliedConditionTcpEstablished**
**policy condition tcpflags**

Configures a specific TCP flag value or combination of flag values as a policy condition.

```
policy condition condition_name tcpflags [any | all] \{f | s | r | p | a | u | e | w\} mask \{f | s | r | p | a | u | e | w\}
policy condition condition_name no tcpflags
```

**Syntax Definitions**

- `condition_name`: The name of the condition.
- `any`: Match on any of the specified TCP flags.
- `all`: Match all specified TCP flags.
- `f | s | r | p | a | u | e | w`: TCP flag value to match (f=fin, s=syn, r=rst, p=psh, a=ack, u=urg, e=ecn, and w=cwr). *The e and w flags are currently not supported.*

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>any</td>
<td>all</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of the command to remove **tcpflags** from a condition; however, at least one classification parameter must be associated with a condition.

- Use the **any** option to indicate that a match on any one of the specified TCP flags qualifies as a match for the condition. Use the **all** option to indicate that a match on all specified TCP flags is required to qualify as a match for the condition.

- Enter one or more TCP flags after the **any** or **all** keyword to indicate that the value of the flag bit must be set to one to qualify as a match.

- Enter one or more TCP flags after the **mask** keyword to indicate which TCP flags to match.

- If a TCP flag is specified as part of the **mask** but does not have a corresponding match value specified with the **any** or **all** options, then zero is assumed as the match value. For example, **tcpflags all f s mask f s a** looks for the following bit values to determine a match: f=1, s=1, a=0.
• Typically this condition is used in combination with source ip, destination ip, source port, destination port, source tcp-port, or destination tcp-port conditions.

• Note that even though tcpflags can be used with most action parameters, it is mainly intended for ACL use.

• Use tcpflags in combination with the IPv6 condition to configure an IPv6 TCP flag policy (for example, policy condition ipv6 tcpflags). Note that IPv6 TCP flag conditions are not supported on the OmniSwitch 6560 and OmniSwitch 6570M.

Examples

-> policy condition tcp-flag tcpflags all f s mask f s a
-> policy condition tcp-flag-ar tcpflags any a r mask a r
-> policy condition tcp-flag-f destination network group Allowed_Resources source tcp-port 1982 tcpflags any f mask f ipv6

policy condition ipv6

Configures a policy condition to classify IPv6 traffic.

```
policy condition condition_name ipv6
```

```
policy condition condition_name no ipv6
```

### Syntax Definitions

*condition_name*  
The name of the condition.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the *no* form of the command to remove IPv6 traffic as a condition; however, at least one classification parameter must be associated with a condition.

- When the *ipv6* keyword is used in a condition, a policy that uses the condition is considered an IPv6 policy. IPv6 policies are effected only on IPv6 traffic. All other IP policies are considered IPv4 policies and are effected only on IPv4 traffic.

- IPv6 Layer 4 policies are supported and are configured using the *ipv6* keyword in a condition that specifies Layer 4 information, services, or service groups. Note that IPv6 Layer 4 policies only work with packets that contain a single header.

- The *icmptype* and *icmpcode* keywords in an IPv6 policy imply the ICMPv6 protocol, not the ICMPv4 protocol.

### Examples

```
-> policy condition cond4 ipv6
-> policy condition cond5 ipv6 tos 7
-> policy condition cond6 ipv6 source port 1/1/1
-> policy condition cond7 ipv6 source tcp-port 21
-> policy condition cond8 ipv6 source tcp-port 0-1024
-> policy condition cond6 no ipv6
```
**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `qos apply`  
  Applies configured QoS and policy settings to the current configuration.
- `show policy condition`  
  Shows information about policy conditions configured on the switch.

**MIB Objects**

- `alaQoSConditionTable`

- `alaQoSAppliedConditionTable`
  - `alaQoSAppliedConditionName`
  - `alaQoSAppliedConditionIpv6Traffic`
policy condition flow-label

Configures an IPv6 flow label value as a policy condition. This value is compared to the flow label value in the IPv6 header.

```
policy condition condition_name flow-label flow_label_value
policy condition condition_name no flow-label
```

### Syntax Definitions

- **condition_name**
  - The name of the condition.

- **flow_label_value**
  - The flow-label value (0–1048575).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>

<td>Support</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

Use the **no** form of the command to remove the flow label value as a condition; however, at least one classification parameter must be associated with a condition.

### Examples

```
-> policy condition cond4 flow-label 1500
-> policy condition cond4 no flow-label
```

### Release History

Release 7.1.1; command was introduced.
Related Commands

qos apply  
Applies configured QoS and policy settings to the current configuration.

show policy condition  
Shows information about policy conditions configured on the switch.

MIB Objects

   alaQoSAppliedConditionIpv6FlowLabelStatus
**policy condition tos**

Configures the precedence bits in the Type of Service (ToS) byte value for a policy condition.

```
policy condition condition_name tos tos_value [mask tos_mask]
policy condition condition_name no tos
```

### Syntax Definitions

- `condition_name` - The name of the condition. May be an existing condition name or a new condition.
- `tos_value` - The Type of Service bits value included in the IP header. The three most significant bits of the byte determine the precedence (i.e., priority) of the frame (0 is the lowest, 7 is the highest).
- `tos_mask` - The mask for the ToS bits, in the range 0–7.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of this command to remove a ToS value from a condition; however, at least one classification parameter must be associated with a condition.
- If a ToS value is specified, a DSCP value may not be specified.

### Examples

```
-> policy condition cond2 tos 7
```

### Release History

Release 7.1.1; command was introduced.
Related Commands

- **policy condition**: Creates a policy condition.

  - **alaQoSAppliedConditionName**
  - **alaQoSAppliedConditionTos**
**policy condition dscp**

Configures the Differentiated Services Code Point (DSCP) for a policy condition. The DSCP value defines the six most significant bits of the DS byte in the IP header.

```
policy condition condition_name dscp {dscp_value[-value]} [mask dscp_mask]
policy condition condition_name no dscp
```

**Syntax Definitions**

<table>
<thead>
<tr>
<th><code>condition_name</code></th>
<th>The name of the condition. May be an existing condition name or a new condition.</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>dscp_value[-value]</code></td>
<td>The DiffServ Code Point value, in the range 0–63. Use a hyphen to specify a range of DSCP values for the condition (for example, 10-20).</td>
</tr>
<tr>
<td><code>dscp_mask</code></td>
<td>The mask for the DiffServ Code Point, in the range 0–63. Specifying a DSCP mask for a policy condition is not supported on an OmniSwitch 6360 or OmniSwitch 6465.</td>
</tr>
</tbody>
</table>

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove a DSCP value from a condition; however, at least one classification parameter must be associated with a condition.
- If a DSCP value is specified, a ToS value may not be specified.
- When a DSCP policy condition is configured on one of these switches, QoS automatically calculates the appropriate mask value.

**Examples**

```
-> policy condition cond4 dscp 10
-> policy condition cond5 dscp 20-30
```

**Release History**

Release 7.1.1; command was introduced.
Related Commands

**policy condition source mac**

Configures a source MAC address for a policy condition.

```
policy condition condition_name source mac mac_address [mask mac_mask]
policy condition condition_name no source mac
```

**Syntax Definitions**

- **condition_name**: The name of the condition. May be an existing condition name or a new condition.
- **mac_address**: The source MAC address in the Layer 2 header of the frame (for example, 00:20:da:05:f6:23)
- **mac_mask**: Optional. The mask for the source MAC address (for example, ff:ff:ff:ff:ff:ff).

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

**policy condition destination mac**

Configures a destination MAC address for a policy condition.

Specifying a destination MAC address and mask of all zeros (00:00:00:00:00:00) as a policy condition can result in the switch dropping all traffic. Only use this type of condition in combination with other policies that will allow desired traffic and/or if a source or destination slot/port is also part of the destination MAC condition.

```
policy condition condition_name destination mac [mask mac_mask]
policy condition condition_name no destination mac
```

**Syntax Definitions**

- `condition_name` The name of the condition. May be an existing condition name or a new condition.
- `mac_address` The destination MAC address in the Layer 2 header of the frame (for example, 00:20:da:05:f6:23).
- `mac_mask` Optional. The mask for the destination MAC address (for example, ff:ff:ff:ff:ff:ff).

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

  - `alaQoSAppliedConditionSourceVlan`
**policy condition inner source-vlan**

Configures an inner source VLAN ID as a policy condition. This condition applies to double-tagged VLAN Stacking traffic and is used to classify such traffic based on the inner VLAN ID tag, also known as the customer VLAN ID.

**Syntax**

```
policy condition condition_name inner source-vlan vlan_id
policy condition condition_name no inner source-vlan
```

**Syntax Definitions**

- `condition_name` The name of the condition. May be an existing condition name or a new condition.
- `vlan_id` The inner source VLAN ID (customer VLAN ID) to match on double-tagged packets.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

**policy condition source port**

Configures a source port number for a policy condition. Use the **no** form of the command to remove a source port number from a condition.

```
policy condition condition_name source {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]}
policy condition condition_name no source {port | linkagg}
```

**Syntax Definitions**

- **condition_name**: The name of the condition. May be an existing condition name or a new condition.
- **chassis**: The chassis identifier.
- **slot/port[-port2]**: The slot and port number on which the frame is received. Use a hyphen to specify a range of ports (1/5-10). **Specifying a range of ports for a policy condition is not supported on an OmniSwitch 6360 or OmniSwitch 6465.**
- **agg_id[-agg_id2]**: The link aggregate ID on which the frame is received. Use a hyphen to specify a range of IDs (10-15). **A link aggregate policy condition is not supported on the OmniSwitch 6560, OmniSwitch 6570M, OmniSwitch 6900-V72/C32, and OmniSwitch 9900.**

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use the **no** form of the command to remove a source port from a condition; however, at least one classification parameter must be associated with a condition.

**Examples**

- `policy condition cond2 source port 3/1/1`
- `policy condition cond3 source port 3/2/1-4`
- `policy condition cond3 no source port`
- `policy condition cond3 source linkagg 10`
- `policy condition cond3 source linkagg 15-20`
- `policy condition cond3 no source linkagg`
Release History

Release 7.1.1; command was introduced.
Release 8.3.1; linkagg parameter added.

Related Commands

- qos apply: Applies configured QoS and policy settings to the current configuration.
- policy condition: Creates a policy condition.
- show policy condition: Shows information about policy conditions configured on the switch.

policy condition destination port

Configures a destination port number for a policy condition.

policy condition condition_name destination {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]}

policy condition condition_name no destination {port | linkagg}

Syntax Definitions

| condition_name | The name of the condition. May be an existing condition name or a new condition.
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>chassis</td>
<td>The chassis identifier.</td>
</tr>
<tr>
<td>slot/port[-port2]</td>
<td>The slot and port number for which the frame is destined. Use a hyphen to specify a range of ports (1/5-10).</td>
</tr>
<tr>
<td>agg_id[-agg_id2]</td>
<td>The link aggregate ID for which the frame is destined. Use a hyphen to specify a range of IDs (10-15). A link aggregate policy condition is not supported on the OmniSwitch 6900-V72/C32 and OmniSwitch 6900-X48C6/T48C6/X48C4E/V48C8.</td>
</tr>
</tbody>
</table>

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the no form of the command to remove a destination port from a condition; however, at least one classification parameter must be associated with a condition.
- The destination port condition does not apply to routed traffic. Only bridged unicast traffic is supported (bridged multicast and broadcast traffic is not supported).
- On an OmniSwitch 9900, a destination port condition is supported only when the condition is part of a policy rule that was configured using the no default-list option (for example, policy rule r1 condition c1 action a1 no default-list) and the rule is assigned to an egress policy list.

Examples

-> policy condition cond3 destination port 4/2/1
-> policy condition cond4 destination port 4/3/1-4
-> policy condition cond4 no destination port
QoS Policy Commands

-> policy condition cond4 destination linkagg 10
-> policy condition cond4 destination linkagg 15-20
-> policy condition cond4 no destination linkagg

On the OmniSwitch 9900, a destination port condition is supported only with the following configuration of the policy rule:

-> policy condition cond5 destination port 1/3/1
-> policy action a1
-> policy rule r1 condition cond5 action a1 no default-list
-> policy list list1 type egress
-> policy list list1 rules r1
-> qos apply

Release History

policy condition vrf

Associates a Virtual Routing and Forwarding (VRF) instance with a policy condition.

```
policy condition condition_name vrf {vrf_name | default}
policy condition condition_name no vrf
```

Syntax Definitions

- **condition_name**: The name of the condition. May be an existing condition name or a new condition.
- **vrf_name**: The name of the VRF instance to which the QoS policy condition applies.
- **default**: Specifies the default VRF instance.

Defaults

By default, QoS policy conditions are not associated with any VRF instance. The policy applies across all instances.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the no form of the command to remove a VRF instance from a condition; however, at least one classification parameter must be associated with a condition.
- VRF policies are configured in the default VRF, similar to how all other QoS policies are configured. If the VRF name specified does not exist, the policy is not allocated any system resources.
- Policies that do not specify a VRF name are considered global policies and are applied across all VRF instances and VLANs.
- Policies that specify the default VRF apply only to traffic in the default VRF instance.
- Policies that specify a VRF name apply only to traffic in the VRF instance associated with that name.
- The switch network group is supported only in VRF policies that specify the default VRF instance. If this group is specified in a global policy (no VRF specified) then the policy is applied across all VRF instances.
**Examples**

- `policy condition cond6 vrf engr-vrf`
- `policy condition cond7 vrf default`
- `policy condition cond6 no vrf`

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

policy condition app-mon-application-group

Associates an Application Monitoring and Enforcement (AppMon) application group with a policy condition.

policy condition condition_name app-mon-application-group group_name

policy condition condition_name no app-mon-application-group

Syntax Definitions

condition_name
The name of the condition. May be an existing condition name or a new condition.

group_name
The name of the AppMon application group to which the QoS policy condition applies.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the no form of the command to remove an AppMon group name from a condition; however, at least one classification parameter must be associated with a condition.

- The app-mon-application-group policy condition is used in the rules associated with QoS default policy lists or UNP policy lists.

- Policy condition command will not support any other native QoS policy condition keywords along with AppMon application group or name keyword.

- For more information about AppMon, see the “Configuring Application Monitoring and Enforcement” chapter in the OmniSwitch AOS Release 8 Network Configuration Guide.

Examples

-> policy condition cond6 app-mon-application-group web
-> policy condition cond6 no app-mon-application-group

Release History

Release 8.2.1; command was introduced.
Related Commands

policy condition app-mon-application-name

Associates an Application Monitoring and Enforcement (AppMon) application name with a policy condition.

```
policy condition condition_name app-mon-application-name app_name
policy condition condition_name no app-mon-application-name
```

**Syntax Definitions**

- **condition_name**
  - The name of the condition. May be an existing condition name or a new condition.

- **app_name**
  - The name of the AppMon application to which the QoS policy condition applies.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of the command to remove an AppMon application name from a condition; however, at least one classification parameter must be associated with a condition.

- The `app-mon-application-group` policy condition is used in the rules associated with QoS default policy lists or UNP policy lists.

- Policy condition command will not support any other native QoS policy condition keywords along with AppMon application group or name keyword.

- For more information about AppMon, see the “Configuring Application Monitoring and Enforcement” chapter in the *OmniSwitch AOS Release 8 Network Configuration Guide*.

**Examples**

```
-> policy condition cond6 app-mon-application-name whatsapp
-> policy condition cond6 no app-mon-application-name
```

**Release History**

Release 8.2.1; command was introduced.
Related Commands

**policy condition appfp-group**

Associates an Application Fingerprinting (AFP) application signature group with a policy condition.

```
policy condition condition_name appfp-group group_name
```

```
policy condition condition_name no appfp-group
```

### Syntax Definitions

- **condition_name**: The name of the condition. May be an existing condition name or a new condition.
- **group_name**: The name of the AFP application group to which the QoS policy condition applies.

### Defaults

N/A.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of the command to remove an AFP group name from a condition; however, at least one classification parameter must be associated with a condition.
- The `appfp-group` policy condition is used in rules associated with QoS policy lists that are applied to AFP ports running in either the QoS or UNP mode.

### Examples

```
-> policy condition cond6 appfp-group my-p2p
```

```
-> policy condition cond6 no appfp-group
```

### Release History

Release 7.3.2; command was introduced.
Related Commands

- **qos apply**: Applies configured QoS and policy settings to the current configuration.
- **policy condition**: Creates a policy condition.
- **show policy condition**: Shows information about policy conditions configured on the switch.

MIB Objects

alaQoSConditionTable
  - alaQoSConditionAppFpGroup
  - alaQoSConditionAppFpGroupStatus
**policy condition vxlan**

Creates a VXLAN Snooping policy condition to determine the parameters the switch uses to classify incoming encapsulated Virtual eXtensible Local Area Network (VXLAN) packets. Condition parameters may be configured when the condition is created; or parameters may be configured for an existing condition. At least one parameter must be configured for a condition.

This section describes the base command. Optional keywords are listed below and described as separate commands later in this chapter. (Options may be used in combination but are described separately for ease in explanation.) Use the `no` form for keywords to remove a parameter from the condition.

```plaintext
policy condition condition_name vxlan vni vxlan_id
    [inner source mac mac_address [mask mac_mask]]
    [inner source mac-group mac_group]
    [inner source ip ip_address [mask netmask]]
    [inner source ipv6 ip6_address [mask netmask]]
    [inner ip-protocol protocol]
    [inner l4-port {src src_port | dest dest_port}]
    [vxlan-port udp_port]
```

**Syntax Definitions**

- **condition_name**
  - The name of the VXLAN condition. Any alphanumeric string.

- **vxlan_id**
  - A 24-bit numerical value that identifies traffic for a VXLAN segment. The valid range is 1–2147483647.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- A policy condition and a policy action are combined to make a policy rule. See the `policy rule` command.
- Use the `qos apply` command to activate configuration changes.
- If multiple keywords are defined for a single condition, the traffic flow must match all of the parameters in the condition before the rule is enforced.
Use the **no** form of the command to remove a condition from the switch configuration.

The **vni** (VXLAN Network Identifier) parameter is required to configure a VM Snooping policy condition. The VXLAN header contains the VNI that is associated with the source MAC address of the Ethernet frame that is encapsulated in a VXLAN packet. The VNI represents the VXLAN segment ID to which the packet belongs.

The **vxlan-port** condition parameter applies only to the outer header of an encapsulated VXLAN packet. All other **inner** condition parameters apply only to the inner header of the Ethernet frame that was encapsulated in a VXLAN packet.

When a VXLAN Snooping policy condition is used in a policy rule, the rule is then applied only to traffic on ports that have the VM Snooping feature enabled.

All existing policy actions are supported in combination with VXLAN Snooping policy conditions; there are no specific policy actions required for policy rules containing VXLAN Snooping policy conditions. Policy actions are applied to the outer header of an encapsulated VXLAN packet.

See the “Configuring VXLAN Snooping” chapter in the *OmniSwitch AOS Release 8 Data Center Switching Guide* for more information about using VXLAN Snooping policy rules.

**Examples**

```
-> policy condition cond4 vxlan vni 23000
```

The following is an example of using VM Snooping policy conditions in a policy rule that is added to a UNP policy list:

```
-> policy condition c1 vxlan vni 1234 udp-port 4789
-> policy condition c1 vxlan inner source mac 00:11:22:33:44:00
-> policy condition c1 vxlan inner source ip 10.10.10.10
-> policy action a1 disposition dscp 45
-> policy rule r1 condition c1 action a1 no default-list
-> policy list list1 type UNP
-> policy list list1 rule r1
-> qos apply
```

**Release History**

Release 7.3.4; command was introduced.

**Related Commands**

- **qos apply**
  Applies configured QoS and policy settings to the current configuration.

- **policy action**
  Configures a policy action.

- **policy rule**
  Configures a policy rule on the switch. A rule is made up of a condition (for classifying incoming traffic) and an action (to be applied to outgoing traffic).

- **show policy condition**
  Shows information about policy conditions configured on the switch.

policy condition vxlan inner source mac

Configures a source MAC address as a policy condition for a VM Snooping policy rule. This type of condition applies to the source MAC address of the inner Ethernet frame of an encapsulated VXLAN packet.

`policy condition condition_name vxlan inner source mac mac_address [mask mac_mask]`

`policy condition condition_name vxlan no source mac`

Syntax Definitions

- **condition_name**: The name of an existing policy condition.
- **mac_address**: The source MAC address of a VM (inner MAC address of an encapsulated VXLAN frame).
- **mac_mask**: Optional. The mask for the source MAC address (for example, ff:ff:ff:ff:ff:ff).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the `no` form of the command to remove the VM source MAC address from a condition; however, at least one classification parameter must be associated with a condition.
- The `vxlan` policy conditions are used to filter VXLAN packets received on VM Snooping ports.

Examples

```
-> policy condition c1 vxlan inner source mac 00:11:22:33:44:00
-> policy condition c2 vxlan inner source mac 00:20:da:05:f6:23 mask ff:ff:ff:ff:ff
-> policy condition c2 vxlan no source mac
```

Release History

Release 7.3.4; command was introduced.
Related Commands

qos apply
Applies configured QoS and policy settings to the current configuration.

policy condition vxlan
Creates a policy condition.

show policy condition
Shows information about policy conditions configured on the switch.

MIB Objects

alaQoSConditionTable

alaQoSConditionVmSourceMacAddr
alaQoSConditionVmSourceMacAddrStatus
alaQoSConditionVmSourceMacMask
**policy condition vxlan inner source mac-group**

Configures a source MAC address group as a policy condition for a VXLAN Snooping policy rule. This type of condition checks to see if the source MAC address of the inner Ethernet frame of an encapsulated VXLAN packet matches any of the MAC addresses specified in the MAC address group.

**Syntax**

`policy condition condition_name vxlan inner source mac-group group_name`

`policy condition condition_name vxlan no source mac-group`

**Syntax Definitions**

- `condition_name`: The name of an existing policy condition.
- `group_name`: The name of the source MAC group, configured through the `policy mac group` command.

**Defaults**

N/A.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

  Shows information about policy conditions configured on the switch.

**MIB Objects**

alaQoSConditionTable

- alaQoSConditionVmSourceMacGroup
- alaQoSConditionVmSourceMacGroupStatus
policy condition vxlan inner source ip

Configures a source IPv4 address as a policy condition for a VXLAN Snooping policy rule. This type of condition applies to the source IP address of the inner Ethernet frame of an encapsulated VXLAN packet.

```
policy condition condition_name vxlan inner source ip ip_address [mask netmask]
policy condition condition_name vxlan no source ip
```

Syntax Definitions

- **condition_name**: The name of an existing policy condition.
- **ip_address**: A specific source IP address.
- **netmask**: The network mask for the source IP address (for example, 255.0.0.0, 255.255.0.0).

Defaults

```
<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>netmask</td>
<td>IP address class</td>
</tr>
</tbody>
</table>
```

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the **no** form of the command to remove the source IP address from a condition; however, at least one classification parameter must be associated with a condition.
- The **vxlan** policy conditions are used to filter VXLAN packets received on VXLAN Snooping ports.

Examples

- `-> policy condition c1 vxlan inner source ip 10.1.1.2`
- `-> policy condition c2 vxlan inner source ip 10.1.1.3 mask 255.0.0.0`
- `-> policy condition c1 vxlan no source ip`

Release History

Release 7.3.4; command was introduced.

**policy condition vxlan inner source ipv6**

Configures a source IPv6 address as a policy condition for a VXLAN Snooping policy rule. This type of condition applies to the source IP address of the inner Ethernet frame of an encapsulated VXLAN packet.

```
policy condition condition_name vxlan inner source ipv6 ipv6_address [mask netmask]
policy condition condition_name vxlan no source ipv6
```

**Syntax Definitions**

- **condition_name**: The name of an existing policy condition.
- **ipv6_address**: A specific source IPv6 address.
- **netmask**: The network mask for the source IPv6 address.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>netmask</td>
<td>IPv6 address class</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

**policy condition vxlan inner ip-protocol**

Configures a an IP protocol number as a policy condition for a VXLAN Snooping policy rule. This type of condition applies to the IP protocol of the inner Ethernet frame of an encapsulated VXLAN packet.

**policy condition condition_name vxlan inner ip-protocol protocol**

**policy condition condition_name vxlan no ip-protocol**

### Syntax Definitions

- **condition_name**: The name of an existing policy condition.
- **protocol**: The IP protocol number. The range is 0–255.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

policy condition vxlan inner l4-port

Configures a Layer 4 (UDP or TCP) source port and/or destination port as a policy condition for a VXLAN Snooping policy rule. This type of condition applies to the Layer 4 port of the inner Ethernet frame of an encapsulated VXLAN packet.

```
policy condition condition_name vxlan inner l4-port {src src_port | dest dest_port}
policy condition condition_name vxlan no l4-port
```

**Syntax Definitions**

- `condition_name`: The name of an existing policy condition.
- `src_port`: The source port number. The valid range is 0–65535.
- `dest_port`: The destination port number. The valid range is 0–65535.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

policy condition vxlan vxlan-port

Configures a UDP destination port number as a policy condition for a VXLAN Snooping policy rule. This number is found in the outer IP header of an encapsulated VXLAN packet.

```
policy condition condition_name vxlan vxlan-port udp_port
policy condition condition_name vxlan no vxlan-port
```

### Syntax Definitions

- **condition_name**: The name of an existing policy condition.
- **udp_port**: The UDP destination port number of the VXLAN packet. The valid range is 0–65535

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6/</th>
<th>6900 X48C4E/V48C8/</th>
<th>9900</th>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of the command to remove the VXLAN port number from a condition; however, at least one classification parameter must be associated with a condition.
- VXLAN packets use the well-known UDP destination port 4789 by default.
- The `vxlan` policy conditions are used to filter packets received on VXLAN Snooping ports.

### Examples

```
-> policy condition c1 vxlan vxlan-port 6000
-> policy condition c1 vxlan 7000
-> policy condition c1 vxlan no vxlan-port
```

### Release History

**MIB Objects**

alaQoSConditionTable

- alaQoSConditionVxlanPort
- alaQoSConditionVxlanPortStatus
**policy action**

Configures or deletes a QoS action. A QoS action describes how traffic that matches a particular QoS condition should be treated. It may specify a particular set of bandwidth and queue parameters, or it may simply specify whether the flow is allowed or denied on the switch.

This section describes the base command. Optional keywords are listed below and described as separate commands later in this chapter. (Options may be used in combination but are described separately for ease in explanation.) Use the `no` form for keywords to remove the parameter from the action.

Note that some action parameters may not be supported depending on the platform you are using. Also some action parameters may not be supported with some conditions. See the condition in the *OmniSwitch AOS Release 8 Network Configuration Guide*.

```plaintext
policy action action_name
  [disposition {accept | drop | deny}]
  [shared]
  [priority priority_value]
  [maximum bandwidth bps]
  [maximum depth bytes]
  [cir bps [cbs bytes] [pir bps] [pbs bytes] [color-only]]
  [cpu priority priority]
  [tos tos_value]
  [802.1p 802.1p_value]
  [dscp dscp_value]
  [map {802.1p | tos | dscp} to {802.1p | tos | dscp} using map_group]
  [permanent gateway ip ip_address]
  [permanent gateway ipv6 ipv6_address]
  [port-disable]
  [redirect port chassis/slot/port]
  [redirect linkagg link_agg]
  [no-cache]
  [{ingress | egress | ingress egress | no} mirror {chassis/slot/port | session session_id}]
```

```plaintext
policy no action action_name
```

**Syntax Definitions**

- `action_name`  
  A name for the action, any alphanumeric string.

**Defaults**

By default, no drop algorithm is configured for the action, and any queues created by the action are not shared.

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>accept</td>
<td>drop</td>
</tr>
</tbody>
</table>
Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Any condition parameters that the hardware supports will be used to classify the traffic; any condition parameters that are not supported by the hardware will not be used to classify traffic, and the event will be logged in the QoS log.
- Bandwidth parameters may be specified when the action is created or may be specified as separate commands.
- Use the `qos apply` command to activate configuration changes.
- Use the `no` form of the command to remove a QoS action from the configuration.
- If the `configuration snapshot` command is entered after the `policy action` command is configured, the resulting ASCII file will include the following additional syntax for the `policy action` command:

  ```
  from {cli | ldap | blt}
  ```

  This syntax indicates how the action was created. The `cli` and `ldap` options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The `blt` option indicates a built-in action, this setting is not configurable.
- Policy action port-disable is not supported for service domain traffic.

Examples

```
-> policy action action1 accept
```

Release History

Release 7.1.1; command was introduced.
Release 8.6R1; `session` keyword added.

Related Commands

- `policy condition`: Configures a condition associated with the action.

- `show policy action`: Displays information about policy actions.

MIB Objects

- `alaQoSActionTable`
- `alaQoSActionName`
- `alaQoSActionSource`
alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedActionSource
policy action disposition

Configures a disposition for a policy action.

policy action action_name disposition {accept | drop | deny}

Syntax Definitions

action_name  The name of the action.
accept       Specifies that the switch should accept the flow.
drop         Specifies that the switch should silently drop the flow.
deny         Specifies that the switch should drop the flow and issue an ICMP message indicating the flow was dropped for administrative reasons. Currently this option will provide the same result as drop; that is, the flow is silently dropped.

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>accept</td>
<td>drop</td>
</tr>
</tbody>
</table>

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

Use the no form of this command to remove a disposition from an action.

Examples

-> policy action a3 disposition deny

Release History

Release 7.1.1; command was introduced.
Related Commands

- **qos apply**
  - Applies configured QoS and policy settings to the current configuration.
- **policy action**
  - Creates a policy action.
- **show policy action**
  - Displays information about policy actions.

MIB Objects

- **alaQoSActionTable**
  - **alaQoSActionName**
- **alaQoSActionDisposition**
- **alaQoSAppliedActionTable**
  - **alaQoSAppliedActionName**
  - **alaQoSAppliedActionDisposition**
**policy action shared**

Enables bandwidth sharing among multiple QoS rules that use the same maximum bandwidth action.

**policy action action\_name shared**

**policy action action\_name no shared**

### Syntax Definitions

<table>
<thead>
<tr>
<th>action_name</th>
<th>The name of the action.</th>
</tr>
</thead>
</table>

### Defaults

By default, queues created by an action are *not* shared.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- If the *shared* policy action is not specified, then each bandwidth rule will implement a separate instance of the specified bandwidth allocation.
- Use the *no* form of the command to disable sharing.

### Example

- `-> policy action action5 maximum bandwidth 10m shared`
- `-> policy action action6 maximum bandwidth 10m shared`
- `-> policy action action5 no shared`

### Release History

Release 7.1.1; command was introduced.
### Related Commands

<table>
<thead>
<tr>

  - alaQoSAppliedActionName
  - alaQoSAppliedActionShared
policy action priority

Configures the priority for queuing a flow to which the QoS action applies.

policy action action_name priority priority_value

policy action action_name no priority

Syntax Definitions

action_name The name of the action.
priority_value The priority given to scheduling traffic on the output port. Values range from 0 (lowest) to 7 (highest).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the no form of this command to remove a priority value from an action.
- This priority value is independent of 802.1Q, Type of Service (ToS), or Differentiated Services Code Point (DSCP) values.

Examples

-> policy action action1 priority 1
-> policy action action1 no priority

Release History

Release 7.1.1; command was introduced.

  alaQoSAppliedActionPriority
  alaQoSAppliedActionPriorityStatus
**policy action maximum bandwidth**

Configures a maximum bandwidth value for a policy action.

```
policy action action_name maximum bandwidth bps[k | m | g | t]
policy action action_name no maximum bandwidth
```

**Syntax Definitions**

- `action_name` The name of the action.
- `bps[k | m | g | t]` The maximum amount of bandwidth, in bits-per-second, for all traffic that ingress on the port. The value may be entered as an integer (for example, 10) or with abbreviated units (for example, 10k, 5m, 1g, 1t).

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>k</td>
<td>m</td>
</tr>
<tr>
<td>k</td>
<td></td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of the command to remove a maximum bandwidth value from an action.
- If the maximum bandwidth value is specified as an integer, without an abbreviated unit designation, the value is applied in kbps by default. For example, if the number 10 is specified, 10K is the maximum bandwidth value used. However, if 10G is specified, the maximum bandwidth value applied is 10 gbps.
- Use the `shared` policy action to enabling sharing of bandwidth across policy rules that specify the same maximum bandwidth action.

**Examples**

- `-> policy action action3 maximum bandwidth 10000`
- `-> policy action action4 maximum bandwidth 10k shared`
- `-> policy action action5 maximum bandwidth 10k shared`
- `-> policy action action4 no maximum bandwidth`
**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- **qos apply**  
  Applies configured QoS and policy settings to the current configuration.
- **policy action**  
  Creates a policy action.

  Displays information about policy actions.

**MIB Objects**

- **alaQoSActionTable**
  - **alaQoSActionName**
  - **alaQoSActionMaximumBandwidth**
- **alaQoSAppliedActionTable**
  - **alaQoSAppliedActionName**
  - **alaQoSAppliedActionMaximumBandwidth**
**policy action maximum depth**

Configures the maximum queue depth or bucket size assigned to this action, in bytes. The queue depth or bucket size determines the amount of buffer allocated to each queue. When the queue depth or bucket size is reached, the switch starts dropping packets.

```
policy action action_name maximum depth bytes [K (kilo)| M (mega) | G (giga) | T (tera)]
policy action action_name no maximum depth
```

### Syntax Definitions

- **action_name**: The name of the action.
- **bytes [K | M | G | T]**: The maximum queue depth in bytes. The value may be entered as an integer (for example, 10) or with abbreviated units (for example, 10k, 5m, 1g). If the value is entered as an integer, the switch uses the default unit of K(kilo).

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>K</td>
<td>M</td>
</tr>
<tr>
<td>bytes</td>
<td>0</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of this command to remove a maximum depth value from a policy action.
- If the maximum depth value is specified as an integer, without an abbreviated unit designation, the value is applied in Kbytes by default. For example, if the number 10 is specified, 10K bytes is the maximum depth value used. However, if 10G is specified, the maximum depth value applied is 10G bytes.
- A maximum depth action is used in combination with a maximum bandwidth action.

### Examples

```
-> policy action action2 maximum depth 100
-> policy action action2 no maximum depth
```
Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply  Applies configured QoS and policy settings to the current configuration.
policy action  Creates a policy action.
show policy action  Displays information about policy actions.

MIB Objects

alaQoSActionTable
  alaQoSActionName
  alaQoSActionMaximumDepth
alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedActionMaximumDepth
**policy action cir**

Configures a Tri-Color Marking (TCM) policy action. This type of action includes parameters for Committed Information Rate (CIR), Committed Burst Size (CBS), Peak Information Rate (PIR), and Peak Burst Size (PBS). The TCM policier meters and marks packets red, green, or yellow based on the parameter values of this policy action.

```
policy action action_name cir bps [cbs bytes] [pir bps] [pbs bytes] [color-only]
policy action action_name no cir
policy action action_name no pir
```

### Syntax Definitions

- **action_name**
  - The name of the action.

- **bps [k | m | g | t]**
  - The maximum amount of bandwidth, in bits-per-second, for all traffic that ingresses on the port. The value may be entered as an integer (for example, `10`) or with abbreviated units (for example, `10k, 5m, 1g, 1t`).

- **bytes**
  - The desired value for maximum bucket size, in bytes.

- **color-only**
  - Disables TCM rate limiting based on the metering results. Packets are only marked the specific color that applies to the level of packet conformance.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>cir pir bps</td>
<td>0</td>
</tr>
<tr>
<td>cbs pbs bytes</td>
<td>10K</td>
</tr>
<tr>
<td>k</td>
<td>m</td>
</tr>
</tbody>
</table>

By default, this action enables rate limiting based on TCM marking and metering.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the **no** form of this command to remove the TCM parameter values.
• If the **color-only** parameter is specified with this command, the TCM action will only mark packet color; packets are not rate limited based on the metering results. In this case, packets are then subject to any rate limiting specifications as defined in the queue management configuration for the switch.

• This implementation of TCM supports two rate limiting modes: Single-Rate (srTCM) and Two-Rate (trTCM). The srTCM mode marks packets based only on the CIR and the two burst sizes: CBS and PBS. The trTCM mode marks packets based on both the CIR and PIR and their associated CBS and PBS values.

• There is no explicit CLI command to configure the mode (srTCM or trTCM) in which the TCM meter operates. Instead, the mode is determined by the CIR and PIR values configured for the policy action. If the PIR value is greater than the CIR value, trTCM is used. If the PIR value is less than the CIR value, srTCM is used.

• Configuring CIR and CBS is similar to configuring a maximum bandwidth. Configuring CIR and PIR is similar to configuring maximum depth.

• The number of packets counted as a result of the counter color mode setting is displayed using the **show active policy rule** command. These statistics are only shown for those rules that are configured with a TCM policy action.

**Examples**

The following command examples configure srTCM (the default):

```bash
-> policy action A3 cir 10M
-> policy action A4 cir 10M cbs 4k
-> policy action A5 cir 10M cbs 4k pir 10M
-> policy action A6 cir 10M cbs 4k pir 10M pbs 4k
-> policy action a7 cir 5M cbs 2k color-only
-> policy action A3 no cir
-> policy action A5 no pir
```

The following command examples configure trTCM (note that PIR is greater than CIR):

```bash
-> policy action A7 cir 10M cbs 4k pir 20M
-> policy action A8 cir 10M cbs 4k pir 20M pbs 40M
-> policy action a9 cir 5M cbs 1M pbs 10M pbs 2M color-only
-> policy action A7 no cir
```

**Release History**

policy action cpu priority

Configures a CPU priority policy action.

policy action action_name cpu priority priority

policy action action_name no cpu priority

Syntax Definitions

action_name
The name of the action.

priority
The CPU queue on which packets destined for the CPU are received.
The valid range is 0–31.

Defaults

By default, the CPU priority is set to zero.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Support</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

Usage Guidelines

Use the no form of this command to remove the CPU priority parameter value.

Examples

- -> policy action A7 cpu priority 15
- -> policy action A8 cpu priority 31
- -> policy action A7 no cpu priority

Release History

Release 7.1.1; command was introduced.

**policy action tos**

Configures a Type of Service (ToS) bits value to be applied to packets in outgoing flows to which the specified policy applies.

```
policy action action_name tos tos_value
policy action action_name no tos
```

**Syntax Definitions**

*action_name*  
The name of the action.

*tos_value*  
The three-bit priority value in the IP header that should be set on outgoing frames in flows that match the specified policy. Values range from 0 (lowest priority) to 7 (highest priority).

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the no form of this command to remove a ToS value from a policy action.
- Note that specifying both ToS and DSCP in the same action is not allowed.

**Examples**

```
-> policy action action3 tos 4
-> policy action action3 no tos
```

**Release History**

Release 7.1.1; command was introduced.

**policy action 802.1p**

Configures a value to be set in the 802.1p bits of the 802.1Q byte of an outgoing frame for traffic that matches a policy with this action.

**policy action action_name 802.1p 802.1p_value**

**policy action action_name no 802.1p**

**Syntax Definitions**

- **action_name**: The name of the action.
- **802.1p_value**: The priority value to be set in 802.1Q frames. Values range from 0 (lowest priority) to 7 (highest priority).

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

**policy action dscp**

Configures a Differentiated Services Code Point (DSCP) value to be set in an outgoing flow for traffic that matches rules with this action.

`policy action action_name dscp dscp_value`

`policy action action_name no dscp`

---

**Syntax Definitions**

- **action_name**
  - The name of the action.

- **dscp_value**
  - The DSCP value to be set, in the range 0–63.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

policy action map

Configures a mapping group for a policy action.

policy action map {802.1p | tos | dscp} to {802.1p | tos | dscp} using map_group

policy action no map

Syntax Definitions

action_name The name of the action.
802.1p Indicates that an 802.1p value should be mapped.
tos Indicates that a ToS value should be mapped.
dscp Indicates that a DSCP value should be mapped.
map_group The name of the map group, configured through the policy map group command.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>

<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Usage Guidelines

- When remapping is configured with this command and a flow matches a policy with this remapping action, and the 802.1p, ToS, or DSCP setting in the incoming flow is specified by the map group, the value will be remapped in the outgoing flow according to the map group.
- If the 802.1p, ToS, or DSCP setting in the incoming flow is not a value specified in the map group, the switch will do one of two things:
  - If the remap from and remap to types are the same (802.1p to 802.1p, ToS to ToS, or DSCP to DSCP), the values in the outgoing flow will be unchanged. If the remap from and remap to types are not the same (for example: 802.1p to ToS), the switch will determine the outgoing 802.1p and ToS based on whether or not the port is trusted or untrusted.
- Use the no form of the command to delete the map group from the configuration.

Examples

- policy action a1 map 802.1p to 802.1p using mapGroup2
- policy action a2 map 802.1p to tos using mapGroup3
Release History

Release 7.1.1; command was introduced.

Related Commands

policy action permanent gateway-ip

Used for Policy Based Routing (PBR). Routed flows to which this action is applied will be directed to the IP address specified in the action regardless of whether or not a route already exists in the switch routing table.

\[ \text{policy action } action\_name \text{ permanent gateway-ip } ip\_address \]

\[ \text{policy action } action\_name \text{ no permanent gateway-ip } \]

**Syntax Definitions**

- action_name: The name of the action.
- ip_address: The destination IP address to which packets will be routed.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- Use the *no* form of this command to remove *port-disable* from the policy action.
- An SNMP trap is sent when a port is administratively disabled through a port disable action or a UserPorts shutdown function.
- To enable a port disabled by this action, use the *interfaces* or *interfaces port break-out* command to administratively enable the port, or physically disconnect and reconnect the port cable.

---

**Examples**

- `-> policy action pd01 port-disable`
- `-> policy action pb02 no port-disable`

---

**Release History**

Release 7.1.1; command was introduced.
Related Commands

policy action redirect port

Redirects all traffic (flooded, bridged, routed, and multicast) matching a redirect policy to the specified port instead of the port to which the traffic was destined.

policy action action_name redirect port chassis/slot/port

policy action action_name no redirect port

**Syntax Definitions**

- **action_name**: The name of the action.
- **chassis**: The chassis identifier.
- **slot/port**: The slot and port number that will receive the redirected traffic.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6900</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6</th>
<th>X48C4E/V48C8/C32E/T24C2</th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of the command to remove **redirect port** from the policy action.
- When redirecting routed traffic from VLAN A to VLAN B, the redirect port must belong to VLAN B (tagged or default VLAN).
- Routed packets (from VLAN A to VLAN B) are not modified after they are redirected; the source and MAC address remain the same. In addition, if the redirect port is tagged, the redirected packets will have a tag from the ingress VLAN A.
- If a route exists for the redirected flow, then redirected packets are the final post-routing packets.
- If a route does not exist for the redirected flow, the flow is not redirected to the specified port or link aggregate and is “blackholed”. As soon as a route is available, the flow is then redirected as specified in the policy.
- In most cases, a redirected flow will **not** trigger an update to the routing and ARP tables. If necessary, create a static route for the flow or assign the redirect port to the ingress VLAN (VLAN A) to send packets to the redirect port until a route is available.
- When redirecting bridged traffic on VLAN A, the redirect port must belong to VLAN A (tagged or default VLAN).
Examples

-> policy action rp01 redirect port 1/12/1
-> policy action rp01 no redirect port

Release History

Release 7.1.1; command was introduced.

policy action redirect linkagg

Redirects all traffic (flooded, bridged, routed, and multicast) matching a redirect policy to the specified link aggregate ID instead of the link aggregate to which the traffic was destined.

\[ \text{policy action action\_name redirect linkagg agg\_id} \]

\[ \text{policy action action\_name no redirect linkagg} \]

**Syntax Definitions**

- **action\_name**: The name of the action.
- **agg\_id**: The link aggregate ID number (0–32) to assign to the specified VLAN. See the “Link Aggregation Commands” chapter in this guide.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove **redirect linkagg** from the policy action.
- When redirecting routed traffic from VLAN A to VLAN B, the redirect link aggregate ID must belong to VLAN B (tagged or default VLAN).
- Routed packets (from VLAN A to VLAN B) are not modified after they are redirected; the source and MAC address remain the same. In addition, if the redirect link aggregate ID is tagged, the redirected packets will have a tag from the ingress VLAN A.
- If a route exists for the redirected flow, then redirected packets are the final post-routing packets.
- If a route does not exist for the redirected flow, the flow is not redirected to the specified link aggregate ID and is “blackholed”. As soon as a route is available, the flow is then redirected as specified in the policy.
- In most cases, a redirected flow will **not** trigger an update to the routing and ARP tables. If necessary, create a static route for the flow or assign the redirect port or link aggregate ID to the ingress VLAN (VLAN A) to send packets to the redirect port until a route is available.
- When redirecting bridged traffic on VLAN A, the redirect port or link aggregate ID must belong to VLAN A (tagged or default VLAN).
Examples

-> policy action rp01 redirect linkagg 2
-> policy action rp01 no redirect linkagg 2

  - `alaQoSAppliedActionName`
  - `alaQoSAppliedActionNocache`
**policy action mirror**

Mirrors ingress, egress, or both ingress and egress packets that match a mirroring policy to the specified port.

```
policy action action_name [ingress | egress | ingress egress] mirror {chassis/slot/port | session session_id}

policy action action_name no mirror {chassis/slot/port | session session_id}
```

### Syntax Definitions

- **action_name**
  - The name of the action.

- **ingress**
  - Mirrors ingress packets.

- **egress**
  - Mirrors egress packets.

- **ingress egress**
  - Mirrors ingress and egress packets.

- **chassis**
  - The chassis identifier.

- **slot/port**
  - The slot and port number that will receive the mirrored traffic.

- **session_id**
  - Mirroring session identifier. This parameter is supported only on the OmniSwitch 9900.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>ingress</td>
<td>ingress</td>
</tr>
<tr>
<td>egress</td>
<td>ingress</td>
</tr>
<tr>
<td>ingress egress</td>
<td>ingress</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>supported</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of the command to remove `mirror` from the policy action.

- Use this command to configure a mirror-to-port (MTP) and mirror-to-session action used for policy based mirroring.

- Only one policy-based MTP session is supported at any given time either port-based policy mirroring or session-based policy mirroring. As a result, all mirroring policies must specify the same destination port or same port mirroring session ID.

- Policy based mirroring and the port based mirroring feature can run simultaneously on the same switch.
**Examples**

-> policy action a1 mirror 1/7/1 (default ingress)
-> policy action a1 ingress mirror 1/7/1
-> policy action a1 egress mirror 1/7/1
-> policy action a1 ingress egress mirror 1/7/1
-> policy action a1 no mirror
-> policy action a1 mirror session 1

**Release History**

Release 7.1.1; command was introduced.
Release 8.6R1; session keyword introduced.

### Usage Guidelines

Information about all policy services is displayed unless `service_name` is specified.

### Examples

```
-> show policy service
Service name : sl
  State       = new,
  Destination UDP port = 1001-2004
```

### Output definitions

- **Service Name**
  - The name of the port group, configured through the `policy service` command.

- **State**
  - This field appears if the service was created or modified but not yet applied to the QoS configuration. When the `qos apply` command is issued, this field no longer displays.

- **IPProto**
  - The IP protocol associated with the service.

- **ScrPort**
  - A source port associated with the service.

- **DstPort**
  - A destination port associated with the service.

show policy action

Displays information about pending and applied policy actions configured on the switch.

show [applied] policy action [action_name]

Syntax Definitions

applied  Displays only actions that have been applied to the QoS configuration for the switch.

action_name  The name of the action for which you want to display information; or a wildcard sequence of characters for displaying information about actions with similar names. Use an asterisk (*) to indicate a wildcard character.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Information for all policy actions displays unless action_name is specified.
- When the optional applied parameter is used, pending QoS actions are not displayed.

Examples

-> show policy action
Action name  : a1
  Committed Information Rate = 10.0M,
  Committed Burst size      = 5.00M,
  Peak Information Rate     = 20.0M,
  Peak Burst size           = 5.00M

Action name  : a2
  State            = new,
  Disposition      = deny

Action name  : a3
  State            = new,
  Priority         = 7,
show applied policy action

Action name: a1
Commited Information Rate = 10.0M,
Commited Burst size = 5.00M,
Peak Information Rate = 20.0M,
Peak Burst size = 5.00M

<table>
<thead>

show policy condition

Displays information about pending and applied policy conditions.

```
show [applied] policy condition [condition_name]
```

**Syntax Definitions**

- **applied**
  - Displays only conditions that have been applied to the QoS configuration for the switch.

- **condition_name**
  - The name of the condition for which you want to display information; or a wildcard sequence of characters for displaying information about actions with similar names. Use an asterisk (*) to indicate a wildcard character.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

</tr>
</tbody>
</table>

**Usage Guidelines**

- Information for all policy conditions displays unless `condition_name` is specified.
- When the optional `applied` parameter is used, pending QoS conditions are not displayed.

**Examples**

```
-> show policy condition
Condition name : c1
   Source VLAN  = 1001

Condition name : c2
   State       = new,
   Source IP   = 10.2.2.1,
   Destination UDP port = 17

-> show applied policy condition
Condition name : c1
   Source VLAN  = 1001
```
show policy condition

- Condition name: c1
- Application group = apg1

- Condition name: c2
- State = new,
- Application name = "jabber -init sequence",
- Destination UDP port = 17

show active policy rule

Displays information about pending and applied policy rules that are active (enabled) on the switch.

`show active policy rule [rule_name]`

**Syntax Definitions**

`rule_name`  
The name of the rule for which you want to display information; or a wildcard sequence of characters for displaying information about rules with similar names. Use an asterisk (*) to indicate a wildcard character.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `show policy rule` command to display inactive as well as active policy rules.
- Information for all rules is displayed unless `rule_name` is specified.
- Applied rules may or may not be active on the switch. Applied rules are inactive if they have been administratively disabled with the `disable` option in the `policy rule` command.

**Examples**

```
-> show active policy rule
Rule name    : rl
  Condition name = c1,
  Action name    = a1,
  Packets        = 4166772,
  Bytes          = 266665728
```

</tbody>
</table>

Usage Guidelines

- Information for all rules is displayed unless rule_name is specified.
- Use the show active policy rule command to display only active rules that are currently being enforced on the switch.

Examples

-> show policy rule
Rule name : r1
  Condition name = c1,
  Action name   = a1
Rule name : r2
  State        = new,
  Condition name = c2,
  Action name   = a1
Rule name : r3
  State        = new,
  Condition name = c2,
  Action name   = a2

-> show applied policy rule
Rule name : r1
  Condition name = c1,
  Action name   = a1
**output definitions**

<table>
<thead>
<tr>
<th>Rule name</th>
<th>The name of the policy rule, configured through the <strong>policy rule</strong> command.</th>
</tr>
</thead>
<tbody>
<tr>
<td>State</td>
<td>This field appears if the rule was created or modified but not yet applied to the QoS configuration. When the <strong>qos apply</strong> command is issued, this field no longer displays.</td>
</tr>
<tr>
<td>Condition name</td>
<td>The name of the condition configured for this rule.</td>
</tr>
<tr>
<td>Action name</td>
<td>The name of the action configured for this rule.</td>
</tr>
</tbody>
</table>

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

**policy rule**

Configures a policy rule on the switch. A rule is made up of a condition (for classifying incoming traffic) and an action (to be applied to outgoing traffic).

**MIB Objects**

- alaQoSRuleTable
  - alaQoSRuleName
  - alaQoSRuleEnabled

</tr>
</tbody>
</table>

Usage Guidelines

- Information for all validity periods is displayed unless name is specified.
- Use the show policy rule command to display the validity period that is associated with a policy rule.

Examples

-> show policy validity-period
Validity period name = tuesday
  State             = new,
  Days              = tuesday

Validity period name = february
  Months            = february

-> show applied policy validity-period
Validity period name = february
  Months            = february

output definitions

Validity period name The name of the policy validity period, configured through the iec message-type priority command.

State This field appears if the validity period was created or modified but not yet applied to the QoS configuration. When the qos apply command is issued, this field no longer displays.
**output definitions**

<table>
<thead>
<tr>
<th>Days</th>
<th>The days of the week the validity period is active, configured through the <code>iec message-type priority</code> command. If this field does not appear, then the validity period is not restricted to specific days.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Months</td>
<td>The months during which the validity period is active, configured through the <code>iec message-type priority</code> command. If this field does not appear, then the validity period is not restricted to specific months.</td>
</tr>
<tr>
<td>Hours</td>
<td>The time of day the validity period begins and ends, configured through the <code>iec message-type priority</code> command. If this field does not appear, then the validity period is not restricted to a specific time.</td>
</tr>
<tr>
<td>Interval</td>
<td>The date and time a validity period interval begins and ends, configured through the <code>iec message-type priority</code> command. If this field does not appear, then the validity period is not restricted to a specific date and time interval.</td>
</tr>
</tbody>
</table>

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `iec message-type priority` Configures a validity period that specifies days, times, and/or months during which an associated policy rule is in effect.

**MIB Objects**

**show active policy list**

Displays information about applied policy lists that are active (enabled) on the switch.

```bash
show active policy list [list_name]
```

**Syntax Definitions**

`list_name` The name of the list for which you want to display information; or a wildcard sequence of characters for displaying information about lists with similar names. Use an asterisk (*) to indicate a wildcard character.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Information for all active rules is displayed unless a `list_name` is specified.
- Use the `show policy list` command to display inactive as well as active policy lists.
- Applied lists may or may not be active on the switch. Applied lists are inactive if they have been administratively disabled with the `disable` option in the `policy list` command.
- The display may include any of the following characters:

<table>
<thead>
<tr>
<th>character</th>
<th>definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>+</td>
<td>Indicates that the policy list has been modified or has been created since the last <code>qos apply</code>.</td>
</tr>
<tr>
<td>-</td>
<td>Indicates the policy list is pending deletion.</td>
</tr>
<tr>
<td>#</td>
<td>Indicates that the policy list differs between the pending/applied lists.</td>
</tr>
</tbody>
</table>
Examples

```plaintext
-> show active policy list
```

<table>
<thead>
<tr>
<th>Group Name</th>
<th>From</th>
<th>Type</th>
<th>Enabled</th>
<th>Entries</th>
</tr>
</thead>
<tbody>
<tr>
<td>list1</td>
<td>cli</td>
<td>unp</td>
<td>Yes</td>
<td>r1</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>r2</td>
</tr>
<tr>
<td>+list2</td>
<td>cli</td>
<td>unp</td>
<td>Yes</td>
<td>r3</td>
</tr>
<tr>
<td>egress_list1</td>
<td>cli</td>
<td>egress</td>
<td>Yes</td>
<td>r1</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>r2</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>r3</td>
</tr>
</tbody>
</table>

output definitions

- **Group Name**: The name of the policy list. Configured through the `policy list` command. A plus sign (+) preceding a policy list name indicates that the list was modified or created since the last `qos apply`.
- **From**: Where the list originated.
- **Type**: The type of rule (`unp, egress, apf`). Configured through the `policy list` command. Note that the default policy list is not shown. Use the `show policy rule` command to display rules that are members of the default policy list.
- **Enabled**: Whether or not the rule is enabled. Configured through the `policy list` command.
- **Entries**: The QoS policy rules that are grouped together in this policy list. Configured through the `policy list` command.

Release History

Release 7.2.1; command was introduced.

### Release History

Release 8.3.1.R02; command introduced.
Release 8.4.1.R02; OmniSwitch 6860 and OmniSwitch 6865 support added.

### Related Commands

- **show active policy list**
  - Displays only those policy lists that are currently being enforced on the switch.
- **show policy rule**
  - Displays information about pending and applied policy rules

### MIB Objects

N/A
This chapter describes CLI commands used for managing policies downloaded to the switch from an attached LDAP server. Policy rules can be created on an attached server through the PolicyView GUI application. Policy rules can also be created on the switch directly through CLI or SNMP commands. This chapter describes commands related to managing LDAP policies only. See Chapter 36, “QoS Commands,” for information about commands for creating and managing policies directly on the switch.

The policy commands are based on RFC 2251 and RFC 3060.

MIB information for policy server commands is as follows:

   Filename: ALCATEL-IND1-POLICY-MIB.mib  
   Module: alcatelIND1PolicyMIB

The policy server commands are summarized here:

  policy server load
  policy server flush
  policy server
  show policy server
  show policy server long
  show policy server statistics
  show policy server rules
  show policy server events
**policy server load**

Downloads policies from an LDAP server. These policies are created through the PolicyView management application.

**Syntax Definitions**

N/A

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<p>| | | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Policies are downloaded to the switch from the directory server with the highest preference setting; this server must be enabled and operational (able to bind).

**Examples**

```
-> policy server load
```

**Release History**

Release 7.1.1; command introduced.

**Related Commands**

- **policy server flush**
  Removes all cached LDAP policy data from the switch.

**MIB Objects**

- serverPolicyDecision
policy server flush

Removes all cached LDAP policy data from the switch.

Syntax Definitions
N/A

Defaults
N/A

Platforms Supported
This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

Usage Guidelines
Use this command to remove LDAP policies. Policies configured through the CLI or SNMP are not removed.

Examples

-> policy server flush

Release History
Release 7.1.1; command introduced.

Related Commands

policy server load Downloads policies from a LDAP server. These policies are created through the PolicyView management application.

MIB Objects

serverPolicyDecision
**policy server**

Configures operational parameters for an LDAP-enabled directory server on which policies are stored.

```
policy server ip_address [port port_number] [admin-state {enable | disable}] [preference preference] [user user_name password password] [searchbase search_string] [ssl | no ssl]
```

```
no policy server ip_address [port port_number]
```

### Syntax Definitions

- **ip_address**: The IP address of the LDAP-enabled directory server.
- **port_number**: The TCP/IP port number used by the switch to connect to the directory server.
- **enable**: Enables the specified policy server to download rules to the switch. The policy servers are **up** by default.
- **disable**: Prevents the specified policy server from downloading rules to the switch.
- **preference**: Determines which directory server is used for policy downloads when multiple servers are configured. The range is 0–255. The server with the highest value is used as the policy server. If that server becomes unavailable, the server with the next highest preference value is used for policy downloads.
- **user_name**: The user name for accessing the database entries on the directory server. When spaces are used in the user name, quotation marks must be included: (e.g. “Directory Manager”).
- **password**: The password associated with the user name. The password must match the password defined on the directory server.
- **search_string**: The root of the directory required for searching the policy information. Typically, the search_string includes o=organization and c=country. For example, o=company and c=country.
- **ssl**: Enables a Secure Socket Layer between the switch and the policy server.
- **no ssl**: Disables a Secure Socket Layer between the switch and the policy server.

### Defaults

<table>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

Usage Guidelines

If you change the port number, another entry is added to the policy server table; the existing port number is not changed. To remove a port number, use the no form of this command with the relevant policy server IP address and the port number you want to remove.

Examples

-> policy server 222.22.22.2 port 345 user dirmgr password secret88 searchbase ou=qos,o=company,c=country

Release History

Release 7.1.1; command introduced.

Related Commands

show policy server Displays information about policies downloaded from an LDAP server.

### Usage Guidelines

This command displays detailed information about policy servers. Use the `show policy server` command to display basic information about policy servers.

### Examples

```
-> show policy server long
LDAP server 0
  IP address : 155.132.44.98,
  TCP port : 16652,
  Enabled : Yes,
  Operational status : Unkn,
  Preference : 99,
  Authentication : password,
  SSL : Disabled,
  login DN : cn=Directory Manager,
  searchbase : ou:4.1, cn=policyRoot, o=company.fr
  Last load time : 09/13/01 16:38:18
LDAP server 1
  IP address : 155.132.48.27,
  TCP port : 21890,
  Enabled : Yes,
  Operational status : Unkn,
  Preference : 50,
  Authentication : password,
  SSL : Disabled,
  login DN : cn=Directory Manager,
  searchbase : o=company.fr
  Last load time : 00/00/00 00:00:00
```
### Policy Server Commands

show policy server statistics

Displays statistics about policy directory servers.

show policy server statistics

**Syntax Definitions**

N/A

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

This command displays statistics about server downloads. For information about server parameters, use the `show policy server` command.

**Examples**

```
-> show policy server statistics
Server          IP Address      port accesses delta successes delta errors delta
------------------------------+-----------------+-----------+---------+-----------+----------------+-----------+--------+--------+
  1      155.132.44.98    16652        793   793      295   295        0     0
  2      155.132.48.27    21890        0     0        0     0        0     0
```

**output definitions**

- **Server**: The index number corresponding to the server.
- **IP Address**: The IP address of the LDAP server.
- **port**: The TCP/IP port number used by the switch to connect to the policy server.
- **accesses**: The number of times the server was polled by the switch to download policies.
- **delta**: The change in the number of accesses since the last time the policy server was accessed.
- **successes**: The number of times the server was polled by the switch to download policies and the policies were successfully downloaded.
**output definitions**

| delta          | The change in the number of successful policy downloads since the last time the policy server was accessed. |
| errors         | The number of errors returned by the server. |
| delta          | The change in the number of errors returned by the server since the last time the policy server was accessed. |

**Release History**

Release 7.1.1; command introduced.

**Related Commands**

**policy server**

Configures operational parameters for an LDAP-enabled directory server on which policies are stored.

**MIB Objects**

`policyStatsTable`
- `policyStatsAddress`
- `policyStatsServerPort`
- `policyStatsAccessCount`
- `policyStatsSuccessAccessCount`
- `policyStatsNotFoundCount`
**show policy server rules**

Displays the names of policies originating from a directory server, that have been downloaded to the switch.

**Syntax Definitions**

N/A

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

This command displays information about policies created on directory servers only. Chapter 36, “QoS Commands,” for information about configuring and displaying policies directly on the switch.

**Examples**

```plaintext
-> show policy server rules
Num  name     prio scope  status
----  --------  ----  ------  ------
1     QoSRule1  0     Provisioned Active
2     QoSrule2  0     Provisioned Active
```

**output definitions**

- **Num**: An index number corresponding to the policy rule.
- **name**: The name of the policy rule; only rules configured through PolicyView are displayed in this table.
- **prio**: The priority or preference of the rule. Indicates the order in which rules can be checked to match to the incoming traffic. If two or more rules apply to the traffic, the rule with the highest preference is applied. Preference is determined when the rule is created.
- **scope**: The type of rule. ** Provisioned** is the only type valid for the current release.
output definitions (continued)

| status          | The status of the rule: **Active** indicates that the rule is available in the QoS software on the switch and is available to be applied to the traffic; **notInService** means the rule can be pushed to the QoS software in the future but is not available yet (typically because of a variable validity period); **notReady** indicates that the rule can never be pushed to the QoS software because its validity period has expired or because it has been disabled through SNMP. |

---

**Release History**

Release 7.1.1; command introduced.

**Related Commands**

**policy server load**

Downloads policies from a LDAP server. These policies are created through the PolicyView management application.

**MIB Objects**

policyRuleNamesTable
  - policyRuleNamesIndex
  - policyRuleNamesName
  - policyRuleOperStatus
show policy server events

Displays any events related to a directory server on which policies are stored.

show policy server events

Syntax Definitions

N/A

Defaults

The display is limited to 50 events.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6/V48C8/C32E/T24C2</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>

This chapter includes descriptions for authentication, authorization, and accounting (AAA) commands. The commands are used for configuring the type of authentication as well as the AAA servers and the local user database on the switch.

- Authenticated Switch Access. Authenticates users into the switch to manage the switch. User information is stored on a RADIUS, TACACS+, LDAP or information may be stored locally in the switch user database.

- Local user database. User information may be configured for Authenticated Switch Access. For functional management access, users may be allowed to access specific command families or domains.

MIB information for the AAA commands is as follows:

<table>
<thead>
<tr>
<th>Filename</th>
<th>Module</th>
</tr>
</thead>
<tbody>
<tr>
<td>ALCATEL-IND1-AAA-MIB.mib</td>
<td>alcatelIND1AAAMIB</td>
</tr>
<tr>
<td>ALCATEL-IND1-SYSTEM-MIB.mib</td>
<td>alcatelIND1SystemMIB</td>
</tr>
</tbody>
</table>

aaa radius-server

Configures a RADIUS server for Authenticated Switch Access and device authentication.

    aaa radius-server server_name host [hostname | ip_address | ipv6_address] [hostname2 | ip_address2 | ipv6_address2] {key secret | hash-key hash_secret | prompt-key}[salt salt | hash-salt hash_salt] [retransmit retries] [timeout seconds] [auth-port auth_port] [acct-port acct_port] [vrf-name name] [ssl | no ssl]

no aaa radius-server server_name

Syntax Definitions

server_name  The name of the RADIUS server.
hostname     The host name (DNS name) of the primary RADIUS server. The host name or IP address is required when creating a server.
ip_address | ipv6_address The IPv4 or IPv6 address of the primary RADIUS server. An IP address or host name is required when creating a server.
hostname2   The host name (DNS name) of an optional backup RADIUS server.
ip_address2 | ipv6_address2 The IPv4 or IPv6 address of an optional backup RADIUS server.
secret      The shared secret known to the switch and the server, but which is not sent over the network. Can be any text or hexadecimal string but MUST match the secret configured on the server. The secret is case-sensitive. Required when creating a server.

hash_secret A shared secret that the switch saves with a hashing algorithm.
prompt-key   This option enters the secret key in a obscured format rather than as clear text. When this option is selected, press the Enter key. A prompt appears asking for the secret key. Re-enter the key and only if both entries match, the command is accepted. The key provided in this mode is not displayed on the CLI as text.
salt         The input given through ‘salt’ will be used to add randomness to the encryption of the key. The maximum length of the salt is 15 characters and must be in clear text format. By default, system time will be taken as default salt value.

hash-salt   The salt value for which the input must be in an encrypted format. The maximum length of the hash-salt should not exceed 64 characters.
retries     The number of retries the switch makes to authenticate a user before trying the backup server (hostname2 or ip_address2).
seconds     The timeout for server replies to authentication requests.
auth_port   The UDP destination port for authentication requests.
acct_port   The UDP destination port for accounting requests.
name        The name of the VRF to be used to access the server.
ssl         Enables Transport Layer Security (TLS) between the switch and the RADIUS server.
no ssl      Disables Transport Layer Security (TLS) between the switch and the RADIUS server.

</tr>
</tbody>
</table>

Usage Guidelines

- A host name (or IP address) and a secret are required when configuring a server.
- The server and the backup server must both be RADIUS servers.
- Use the no form of the command to remove a RADIUS server from the configuration. Only one server can be deleted at a time.
- A host name (or IP address) and a secret key are required when configuring a server.
- If key and hash-key parameters are both configured, the hash-key value is given priority over key.
- The user configured or default salt along with the server name will be combined with 'key' and encrypted as a whole, the output of which will be displayed under ‘hash-key’.
- If salt and hash-salt parameters are both configured, the hash-salt value is given priority over salt.
- The special character ‘!’ and pure integers will not be accepted as a valid input for both the salt and hash-salt parameters.
- To use special characters in the salt value, enter the special character between "" double quotes.
- The input given through salt and hash-salt is encrypted and will be displayed as “hash-salt” in show configuration snapshot command.
- Backward compatibility for salt and hash-salt is not supported. In case of an accidental downgrade, a boot.cfg error is generated for that particular configuration, and re-configuration is required.
- RADIUS server can be configured on any VRF instance or the default VRF instance. However, all the RADIUS servers must reside on the same VRF instance.
- Enabling the RADIUS server health check feature is recommended for each RADIUS server to help improve the user authentication time. Use the aaa radius-server health-check command to enable this
AAA Commands

feature and the show aaa server command to determine the reachability status of each RADIUS server on which health check is enabled.

Examples

```
-> aaa radius-server pubs2 host 10.10.2.1 key wwwtoe timeout 5
-> no aaa radius-server pubs2

-> aaa radius-server radsrv1 host rad1_ipaddr key rad1_secret vrf-name rad_vrf
-> aaa radius-server “Rad1” host 10.10.10.2 key myorg salt mysalt
c7f5eee2c0f9b33e72e3482673fb6059

-> aaa radius-server rad1 prompt-key host 10.10.2.1
Enter Key: *******
Confirm Key: *******
```

Release History

Release 7.1.1; command was introduced.
Release 8.3.1; prompt-key parameter added.
Release 8.4.1; IPv6 and SSL support for radius server added.
Release 8.6R1; salt and hash-salt parameters added.

aaa radius-server health-check

Enables or disables the RADIUS server health check configuration for the specified RADIUS server. When this feature is enabled, individual RADIUS servers are polled at the specified time interval to determine whether the server is up or down.

```
aaa radius-server server_name health-check [poling-interval seconds | username user_name | password password | hash-key hash_secret | failover]
no aaa radius-server server_name health-check [failover]
```

**Syntax Definitions**

- `server_name`: The name of the RADIUS server for which a health check session is configured.
- `seconds`: The number of seconds after which a health check request is sent to the specified RADIUS server. The valid range is 60–600 seconds.
- `user_name`: The user name (up to 32 characters) to use in polling requests to the server.
- `password`: The password (up to 64 characters) to use in polling requests to the server.
- `hash_secret`: A shared secret that the switch saves with a hashing algorithm.
- `failover`: Triggers an attempt to re-authenticate users assigned to the authentication server down profile when the RADIUS server comes back up before the authentication server down timeout expires.

**Defaults**

By default, RADIUS server health check is disabled. When health check is enabled without specifying any of the optional parameters, the following default health check parameter values are set for the specified RADIUS server:

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>60</td>
</tr>
<tr>
<td>user_name</td>
<td>alcatel</td>
</tr>
<tr>
<td>password</td>
<td>alcatel</td>
</tr>
<tr>
<td>failover</td>
<td>disabled</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>
Usage Guidelines

- Make sure the specified RADIUS server is defined on the switch before attempting to enable a health check session for that server. See the `aaa radius-server` command for more information on RADIUS server configuration.

- Each RADIUS server with health check enabled is polled at regular intervals (instead of checked sequentially) to determine if the server is up or down. Notification of the server status is then provided to help expedite the authentication process.

- User devices are typically assigned to a UNP authentication server down profile when the authentication server is down (unreachable).
  - If the `failover` option is disabled (the default) for the health check session, re-authentication is not attempted for the profile devices until the authentication server down timeout value expires.
  - If the `failover` option is enabled for the health check session, there is no waiting for the authentication server down timeout value to expire. When the health check session receives notification that a server has transitioned from down to up, a re-authentication attempt is immediately triggered for the profile devices.

- Use the `no` form of this command to disable health check.

- Use the `no` form of this command with the `failover` parameter to disable the failover operation.

Examples

```
-> aaa radius-server rad1 health-check
-> aaa radius-server rad1 health-check polling-interval 300
-> aaa radius-server rad1 health-check username admin password switch failover
-> no aaa radius-server rad1 health-check failover
-> no aaa radius-server rad1 health-check
```

Release History

Release 8.5R4; command introduced.

Related Commands

  - `aaasRadPollingInterval`
  - `aaasRadFailover`
  - `aaasRadUsername`
  - `aaasRadPassword`
aaa radius unp-profile-precedence

This command can be used to set the precedence to filter ID or tunnel private group ID attributes for selection of UNP profile in the event of both these attributes being returned from the RADIUS server.

`aaa radius unp-profile-precedence {tunnel-private-group-id | filter-id}`

**Syntax Definitions**

- **tunnel-private-group-id**: The tunnel private group ID attribute.
- **filter-id**: The filter ID RADIUS attribute.

**Defaults**

By default, filter ID will be given precedence over the tunnel private group ID.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

**Usage Guidelines**

N/A

**Examples**

- `aaa radius unp-profile-precedence tunnel-private-group-id`
- `aaa radius unp-profile-precedence filter-id`

**Release History**

Release 8.5R4; command introduced.

**Related Commands**

- `aaa radius-server`: Configures or modifies a RADIUS server for Authenticated Switch Access and device authentication.
- `show aaa radius config`: Displays the global AAA attribute values and MAC address format.

**MIB Objects**

- `alaAaaRadUnpProfilePrecedence`
aaa test-radius-server

RADIUS test tool allows the user to test the RADIUS server reachability from the OmniSwitch. Use this command to start the authentication or accounting test for the specified user name and password.

`aaa test-radius-server server_name type {authentication user user_name password password [method {md5 | pap}] | accounting user user_name}`

**Syntax Definitions**

- `server_name`: RADIUS server name for which test has been configured.
- `authentication | accounting`: Type of test to run.
- `user_name`: User name configured on the server.
- `password`: Password for the given user name.
- `md5 | pap`: Authentication method for the test.

**Defaults**

By default, MD5 is used as the authentication method.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Support</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td></td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- RADIUS server must be configured on the switch to test the tool.
- The switch must have the following RADIUS server configuration before starting the test tool: RADIUS server name, acct-port, auth-port, secret key, retransmit count, and timeout. See the `aaa radius-server` command for more information on RADIUS server configuration.
- Supports multiple sessions (console, telnet, SSH) to test multiple RADIUS servers.
- The CLI of the user session (console, telnet, SSH) goes in the blocking state when the test is started. In the blocking state, no other command (CLI) is accepted. The blocking state of the CLI prompt of the switch can be terminated by pressing any key.
- Two IP addresses are configurable for a RADIUS server. When the test starts, the requests are sent to the first address. When all the requests to the first address time out, then the requests are sent to the second address.
**Examples**

-> aaa test-radius-server rad1 type authentication user admin password switch method MD5
-> aaa test-radius-server rad2 type authentication user admin password switch method pap
-> aaa test-radius-server rad1 type accounting user admin

**Release History**

Release 8.1.1; command introduced.

**Related Commands**

**MIB Objects**

N/A
aaa tacacs+-server

Configures or modifies a TACACS+ server for Authenticated Switch Access.

```
aaa tacacs+-server server_name host [hostname | ip_address | ipv6_address1] [hostname2 | ip_address2 | ipv6_address2] [key secret | prompt-key] [salt salt | hash-salt hash_salt] [timeout seconds] [port port] [vrf-name name]
```

no aaa tacacs+-server server

Syntax Definitions

- `server_name`: The name of the TACACS+ server.
- `hostname`: The host name (DNS name) of the primary TACACS+ server. The host name or IP address is required when creating a server.
- `ip_address`: The IP address of the primary TACACS+ server. An IP address or host name is required when creating a server.
- `ipv6_address1`: The IPv6 address of the primary TACACS+ server.
- `hostname2`: The host name (DNS name) of an optional backup TACACS+ server.
- `ip_address2`: The IP address of an optional backup TACACS+ server.
- `ipv6_address2`: The IPv6 address of an optional backup TACACS+ server.
- `secret`: The shared secret known to the switch and the server, but which is not sent over the network. Can be any text or hexadecimal string but MUST match the secret configured on the server. The secret is case-sensitive. Required when creating a server.
- `salt`: The input given through ‘salt’ will be used to add randomness to the encryption of the key. The maximum length of the salt is 15 characters, and must be in clear text format. By default, the system time will be taken as default salt value.
- `hash_salt`: The salt value for which the input must be in an encrypted format. The maximum length of the hash-salt should not exceed 64 characters.
- `prompt-key`: This option enters the secret key in a obscured format rather than as clear text. When this option is selected, press the Enter key. A prompt appears asking for the secret key. Re-enter the key and only if both the entries match, the command is accepted. Password provided in this mode is not displayed on the CLI as text.
- `seconds`: The timeout for server replies to authentication requests.
- `port`: The port number for the primary TACACS+ server.
- `name`: The name of the VRF to be used to access the server.

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>2</td>
</tr>
<tr>
<td>port</td>
<td>49</td>
</tr>
</tbody>
</table>
Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the no form of the command to remove a TACACS+ server from the configuration. Only one server may be deleted at a time.
- A host name (or IP address) and a secret are required when configuring a server.
- If key and hash-key parameters are both configured, the hash-key value is given priority over key.
- The user configured or default salt along with the server name will be combined with the key and encrypted as a whole, the output of which will be displayed under ‘hash-key’.
- If salt and hash-salt parameters are configured, the hash-salt value is given priority over salt.
- The special character ‘!’ and pure integers will not be accepted as a valid input for both salt and hashsalt.
- To use special characters in the salt value, enter them in between ”“ double quotes.
- The input given through salt and hash-salt is encrypted and will be displayed as ‘hash-salt’ in the show configuration snapshot command.
- Backward compatibility for salt and hash-salt is not supported. In case of an accidental downgrade, boot.cfg error is generated for that particular configuration, and re-configuration is required.
- The server and the backup server must both be TACACS+ servers.
- TACACS+ server can be configured on any VRF instance or the default VRF instance. However, all the TACACS+ servers must reside on the same VRF instance.

Examples

- > aaa tacacs+-server tpub host 10.10.2.2 key otna timeout 10
- > no aaa tacacs+-server tpub
- > aaa tacacs+-server T1 host 10.10.10.3 key myorg salt salt@123
- > aaa tacacs+-server tacsrv1 host tac1_ipaddr key tac1_secret vrf-name tac_vrf

- > aaa tacacs+-server tac1 prompt-key host 10.10.2.2
  Enter Key:  *******
  Confirm Key:  *******
- > aaa tacacs+-server T1 host 2001:400::f00::2 key testing123 timeout 2
- > aaa tacacs+-server T2 host 2001:400::f00::2 2001:400::f00::9 key testing123
  timeout 2
- > aaa tacacs+-server T3 host "tac.aos.com" key testing123
Release History

Release 7.1.1; command was introduced.
Release 7.3.1; vrf-name parameter added.
Release 8.3.1; prompt-key parameter added.
Release 8.6R1; salt and hash-salt parameters added.
Release 8.7 R3; support for IPv6 added for TACACS+

Related Commands

show aaa server  Displays information about AAA servers.

aaa authentication  Specifies the AAA servers to be used for Authenticated Switch Access.

aaa accounting session  Specifies the accounting servers to be used for Authenticated Switch Access.

MIB Objects

aaaServerTable
   aaasName
   aaasProtocol
   aaasHostName
   aaasIpAddress
   aaasIpv6Address

   aaasVrfName
   aaasRadSalt
   aaasRadSaltHash
aaa tacacs command-authorization

Configures a command based authorization in TACACS+ server for authenticated switch.

aaa tacacs command-authorization {enable | disable}

Syntax Definitions

<table>
<thead>
<tr>
<th>enable</th>
<th>Disable command based authorization in TACACS+ server.</th>
</tr>
</thead>
<tbody>
<tr>
<td>disable</td>
<td>Disable command based authorization. This enables partition-management family based authorization in TACACS+ server.</td>
</tr>
</tbody>
</table>

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

Usage Guidelines

- This command is applicable only for CLI commands.
- If this command is enabled, then in the TACACS+ server the authorization of every command executed on the switch is command based. CLI commands executed on the switch are sent for authorization to the TACACS+ server along with-mode of operation (read or read-write). After authorization, the server will send the response message to the TACACS+ client.
- If the command is disabled, then in the TACACS+ server the authorization is partition-management family based.
- Use show configuration snapshot aaa command to view the configuration details of this command.

Examples

- `aaa tacacs command-authorization enable`
- `aaa tacacs command-authorization disable`

Release History

Release 8.3.1; command was introduced.
Related Commands

**show aaa server**
Displays information about AAA servers.

MIB Objects

alaAaaAuthConfig
alaAaaTacacsServerCmdAuthorization
aaa ldap-server

Configures or modifies an LDAP server for Authenticated Switch Access.

**aaa ldap-server** server_name host {hostname | ip_address | ipv6_address} [hostname2 | ip_address2 | ipv6_address2] dn dn_name {password super_password | prompt-password}[salt salt | hash-salt] [base search_base] [retransmit retries] [timeout seconds] [ssl | no ssl] [port port] [vrf-name name]

**no aaa ldap-server** server_name

---

**Syntax Definitions**

- **server_name**
  - The name of the LDAP server.

- **hostname**
  - The host name (DNS name) of the primary LDAP server. The host name or IP address is required when creating a server.

- **ip_address** | **ipv6_address**
  - The IPv4 or IPv6 address of the primary LDAP server.

- **hostname2**
  - The host name (DNS name) of the backup LDAP server.

- **ip_address2** | **ipv6_address2**
  - The IPv4 or IPv6 address of a backup host for the LDAP server.

- **dn_name**
  - The super-user or administrative distinguished name in the format recognized by the LDAP-enabled directory servers. For example: `cn=manager`. Must be different from the `search-base` name and must be in a format supported by the server. Required when creating a new server.

- **super_password**
  - The super-user password recognized by the LDAP-enabled directory servers. The password may be clear text or hexadecimal format. Required when creating a new server.

- **prompt-password**
  - This option enters the super-user password in an obscured format rather than as clear text. When this option is selected, press the Enter key. A password prompt appears asking for the super-user password. Re-enter the password and only if both the passwords match, the command is accepted. Password provided in this mode is not displayed on the CLI as text.

- **salt**
  - The input given through ‘salt’ will be used to add randomness to the encryption of the key. The maximum length of the salt is 15 characters and must be in clear text format. By default, the system time will be taken as default salt value.

- **hash-salt**
  - The salt value for which the input must be in an encrypted format. The maximum length of the hash-salt should not exceed 64 characters.

- **search_base**
  - The search base recognized by the LDAP-enabled directory servers. For example, `o=company` or `c=country`. Must be different from the `dn_name`. Required when creating a new server.

- **retries**
  - The number of retries the switch makes to the LDAP server to authenticate a user before trying the backup server.

- **seconds**
  - The timeout in seconds for server replies to authentication requests from the switch.
AAA Commands

aaa ldap-server

ssl
Enables Transport Layer Security (TLS) between the switch and the LDAP server.

no ssl
Disables Transport Layer Security (TLS) between the switch and the LDAP server.

port
The port number for the primary LDAP server and any backup server. Must match the port number configured on the server.

name
The name of the VRF to be used to access the server.

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>port</td>
<td>389 (SSL disabled) 636 (SSL enabled)</td>
</tr>
<tr>
<td>retries</td>
<td>3</td>
</tr>
<tr>
<td>seconds</td>
<td>2</td>
</tr>
<tr>
<td>ssl</td>
<td>no ssl</td>
</tr>
</tbody>
</table>

Platforms Supported

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- The dn_name must be different from the search_base name.
- Use the no form of the command to remove an LDAP server from the configuration. Only one server may be removed at a time.
- The port number configured on the switch must match the port number configured for the server.
- If ‘salt’ and ‘hash-salt’ parameters are configured at a time, hash-salt value is given priority over salt.
- The special character ‘!’ and pure integers will not be accepted as a valid input for both salt and hashsalt.
- If you want to provide special characters in salt value, give it in between "" double quotes.
- The input given through ‘salt’ and ‘hash-salt’ is encrypted and will be displayed as ‘hash-salt’ in 'show configuration snapshot' command.
- Backward compatibility for ‘salt’ and ‘hash-salt’ is not supported. In case of an accidental downgrade, boot.cfg error is generated for that particular configuration, and re-configuration is required.
- LDAP server can be configured on any VRF instance or the default VRF instance. However, all the LDAP servers must reside on the same VRF instance.
For IPV6 address, IPV6 LDAP host and interface must be configured in the switch.

**Examples**

-> aaa ldap-server topanga5 host 10.10.3.4 dn cn=manager password tpub base c=us retransmit 4
-> aaa ldap-server omnivista host 1.2.3.4 dn "cn=DirMgr, o=alcatel.com" password somepass base "ou=People, o=alcatel.com" vrf-name ldap_vrf
-> no aaa ldap-server topanga5

-> aaa ldap-server topanga5 host 10.10.3.4 dn cn=manager prompt-password base c=us retransmit 4
Enter Password: *******
Confirm Password: *******

-> aaa ldap-server L1 host 10.10.10.5 dn cn=manager password tpub base c=us salt mysalt

**Release History**

Release 7.1.1; command was introduced.
Release 7.3.1; `vrf-name` parameter added.
Release 8.3.1; `prompt-password` parameter added.
Release 8.6R1; `salt` and `hash-salt` parameters added.
Release 8.7 R1; IPv6 support added.

**system fips admin-state**

Enable or disable the Federal Information Processing Standards (FIPS) mode on the switch.

```
system fips admin-state {enable | disable}
```

### Syntax Definitions

- **enable** | **disable**
  
  Enables or disables the FIPS mode.

### Defaults

By default, the FIPS mode is disabled on the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900V72/C32</th>
<th>6900X48C6/T48C6/V48C8/C32E/T24C2</th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Enabling or disabling FIPS mode takes effect only after a switch reboot. The FIPS mode configuration is persistent across reboots.
- When FIPS mode is disabled, all other existing cryptographic algorithms will be supported.
- A FIPS supported client is required to access the switch in FIPS enabled mode. For example, Absolute Telnet.
- Other unsecured management interfaces, such as Telnet or FTP, have to be manually disabled after FIPS mode is enabled to achieve a completely secure device.

### Examples

```
-> system fips admin-state enable
WARNING: FIPS Admin State only becomes Operational after write memory and reload
```

```
-> system fips admin-state disable
WARNING: FIPS Admin State only becomes Operational after write memory and reload
```

### Release History

Release 8.1.1; command introduced.
Related Commands

show system fips

Show the configured and running status of the FIPS mode on the Switch.

MIB Objects

systemFipsAdminState
aaa authentication

Configures the interface for Authenticated Switch Access and specifies the server(s) to be used. This type of authentication gives users access to manage the switch.

`aaa authentication {console | telnet | ftp | http | snmp | ssh | default} server1 [server2...] [local]`

`no aaa authentication {console | telnet | ftp | http | snmp | ssh | default}`

**Syntax Definitions**

- `console` Configures Authenticated Switch Access through the console port.
- `telnet` Configures Authenticated Switch Access for any port used for Telnet.
- `ftp` Configures Authenticated Switch Access for any port used for FTP.
- `http` Configures Authenticated Switch Access for any port used for Web-based management.
- `snmp` Configures Authenticated Switch Access for any port used for SNMP.
- `ssh` Configures Authenticated Switch Access for any port used for Secure Shell.
- `default` Configures Authenticated Switch Access for any port using any service (`telnet`, `ftp`, etc.). Note that SNMP access is enabled only if an LDAP or local server is specified with the command.
- `server1` The name of the authentication server used for Authenticated Switch Access. At least one server is required. The server may be a RADIUS, TACACS+, LDAP, or the local user database. RADIUS, TACACS+, and LDAP server names are set up through the `aaa radius-server`, `aaa tacacs+-server`, and `aaa ldap-server` commands.
- `server2...` The names of backup servers for Authenticated Switch Access. Up to 3 backups may be specified (including `local`). These backups are only used if `server1` becomes unavailable. They are polled in the order they are listed in this command. The first available server becomes the authentication server.
- `local` Specifies that the local user database will be a backup for the authentication servers. If you want to use the local user database as the only authentication server, specify `local` for `server1`.

**Defaults**

- At switch startup, Authenticated Switch Access is available through console port via the local database. Authentication for other management interfaces (Telnet, FTP, etc.) is disabled.
- The default user on the switch is `admin`, and `switch` is the password.
- Remote authentication is not supported on secondary CMMs or Slave chassis. Use local authentication on secondary CMMs and Slave chassis.
Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- The server type may be RADIUS, TACACS+, LDAP, or the local user database. Up to 4 servers may be configured for an interface type; at least one is required. Each server name should be separated by a space.
- The switch uses only the first available server in the list to check for user information. For example, if server1 is not available, the switch will poll server2. If user information is not found on the first available server, the authentication request will fail.
- RADIUS, TACACS+, and LDAP servers may each have an additional backup specified through the aaa radius-server, aaa tacacs+-server, and aaa ldap-server commands.
- If the local switch database will be used as the only authentication server, specify local for server1. If local is specified as a backup server, it should be entered last in the list of servers. The local user database is always available if the switch is up.
- Only LDAP or the local database may be used for authenticated SNMP management.
- If Secure Shell (ssh) is enabled, Telnet and FTP should be disabled.

Examples

- => aaa authentication telnet pubs1
- => no aaa authentication telnet
- => aaa authentication default pubs2 pubs3

Release History

Release 7.1.1; command was introduced.
**Related Commands**

- **aaa radius-server**
  Configures or modifies a RADIUS server for Authenticated Switch Access.

- **aaa ldap-server**
  Configures or modifies an LDAP server for Authenticated Switch Access.

  - aaatsName4
aaa console admin-only

Enables or disables the user restriction for all users except the user “admin” from accessing the switch through the secure console session.

```
aaa console admin-only {enable | disable}
```

**Syntax Definitions**

- `enable` - Restricts all users from accessing the switch through the secure console session except the user “admin”. Only user “admin” can access the switch through the secure console session.
- `disable` - Disables the user restrictions.

**Defaults**

By default, console admin-only is disabled.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Enable this feature to restrict all users except user “admin” from accessing the switch through the secure console session.

**Examples**

```
-> aaa console admin-only enable
-> aaa console admin-only disable
```

**Release History**

Release 8.3.1 R02; command was introduced.

**Related Commands**

- `user` - Configures user information for the local database on the switch.

**MIB Objects**

- `aaaAsaAccessConsoleAdminOnly`
aaa authentication default

Sets the authenticated switch access type to the default server setting.

```
aaa authentication {console | telnet | ftp | http | snmp | ssh} default
```

### Syntax Definitions

- **console**
  - Configures the default Authenticated Switch Access server setting for the console port.
- **telnet**
  - Configures the default Authenticated Switch Access server setting for Telnet.
- **ftp**
  - Configures the default Authenticated Switch Access server setting for FTP.
- **http**
  - Configures the default Authenticated Switch Access server setting for Web-based management.
- **snmp**
  - Configures the default Authenticated Switch Access server setting for any port used for SNMP.
- **ssh**
  - Configures the default Authenticated Switch Access server setting for any port used for Secure Shell.

### Defaults

By default, the default Authenticated Switch Access server setting does not include any servers.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

Use the `aaa authentication` command to set the default servers.

### Examples

```
-> aaa authentication telnet default
-> aaa authentication default default
```

### Release History

Release 7.1.1; command was introduced.
Related Commands

**aaa radius-server**
Configures or modifies a RADIUS server for Authenticated Switch Access.

**aaa tacacs+-server**
Configures or modifies an LDAP server for Authenticated Switch Access.

Configures user information for the local database on the switch.

**show aaa server**
Displays information about servers configured for Authenticated Switch Access.

MIB Objects

aaaAuthSATable
- aaatsName1
- aaatsName2
- aaatsName3
- aaatsName4
aaa accounting session

Configures an accounting server or servers for authenticated switch sessions. Accounting servers keep track of network resources (time, packets, bytes, etc.) and user activity.

```
aaa accounting session server1 [server2...] [local]
no accounting session
```

Syntax Definitions

- **server1**: The name of the RADIUS, TACACS+, or LDAP server used for accounting of authenticated switch sessions. At least one server is required. RADIUS, TACACS+, and LDAP server names are set up through the `aaa radius-server`, `aaa tacacs+-server`, and `aaa ldap-server` commands.

- **server2...**: The names of backup servers. Up to 3 backups may be specified (including `local`); each server name should be separated by a space. These backups are only used if `server1` becomes unavailable. They are polled in the order they are listed in this command. The first available server becomes the accounting server.

- **local**: Local accounting is done through the Switching Logging feature on the switch.

Defaults

Accounting is disabled by default.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the `no` form of the command to disable accounting for Authenticated Switch Access.

- Up to 4 accounting servers (total) may be specified. At least one server is required. Each server name should be separated by a space.

- The servers may be RADIUS, TACACS+, LDAP servers, and/or the local Switch Logging facility.

- If `local` is specified as `server1`, the switch will only use the local Switching Logging facility for accounting.

- If `local` is specified as a backup, it should be entered last in the list of servers. The Switch Logging facility is always available if the switch is up.
The switch uses *only the first available server* in the list for accounting. For example, if `server1` is not available, the switch will use `server2`.

- RADIUS, TACACS+, and LDAP servers may each have an additional backup specified through the `aaa radius-server`, `aaa tacacs+-server`, and `aaa ldap-server` commands.

**Examples**

```
-> aaa accounting session ldap1 radius2 local
-> no aaa accounting session
```

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `show aaa accounting` Displays information about accounting servers configured for Authenticated Switch Access.

**MIB Objects**

aaAcctsTable

- aaacsName1
- aaacsName2
- aaacsName3
- aaacsName4
aaa accounting command

Enables or disables the server for command accounting. Accounting servers keep track of network resources (time, packets, bytes, etc.) and user activity.

```
aaa accounting command server1 [server2...] [local]

no accounting command
```

**Syntax Definitions**

- `server1`: The name of the TACACS+ server used for command accounting. At least one server is required. TACACS+ server names are set up through the `aaa tacacs+-server` commands.

- `server2...`: The names of TACACS+ backup servers. Up to 3 backups may be specified; each server name should be separated by a space. These backups are only used if `server1` becomes unavailable. They are polled in the order they are listed in this command. The first available server becomes the accounting server.

- `local`: Local accounting is done through the Switching Logging feature on the switch.

**Defaults**

Accounting is disabled by default.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of the command to disable command accounting.

- Up to 4 accounting servers (total) may be specified. At least one server is required. Each server name should be separated by a space.

- The servers can be only TACACS+ servers.

- The switch uses `only the first available server` in the list for accounting. For example, if `server1` is not available, the switch will use `server2`.

- TACACS+ server may each have an additional backup specified through the `aaa tacacs+-server` command.
**Examples**

-> aaa accounting command tacacs1 tacacs2 tacacs3
-> no aaa accounting command

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

**show aaa accounting**  
Displays information about accounting servers configured for Authenticated Switch Access.

**MIB Objects**

`aaaAcctCmdTable`

- `aaacmdSrvName1`
- `aaacmdSrvName2`
- `aaacmdSrvName3`
- `aaacmdSrvName4`
aaa device-authentication

Configures the switch to use RADIUS servers for 802.1X, MAC, and Captive Portal device authentication.

aaa device-authentication {802.1x | mac | captive-portal} server1 [server2] [server3] [server4]

no device-authentication {802.1x | mac | captive-portal}

Syntax Definitions

802.1x  Use the specified RADIUS server to authenticate 802.1X users.
mac     Use the specified RADIUS server for MAC authentication.
captive-portal Use the specified RADIUS server for Captive Portal authentication.
server1 The name of the RADIUS authentication server to use for the specified type of authentication. (Note that only RADIUS servers are supported for these types of authentication.) At least one server is required. RADIUS server names are configured through the aaa radius-server command.

server2...server4 The names of backup servers used for authentication. Up to 3 backups may be specified; include a space between each server name. These backups are only used if server1 becomes unavailable. They are polled in the order they are listed in this command. The first available server becomes the authentication server.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the no form of this command to remove a RADIUS server assignment for a specific authentication type.

- Up to 4 RADIUS servers (total) may be specified. At least one server is required. Each server name should be separated by a space.

- The switch uses only the first available server in the list to check for user information. For example, if server1 is not available, the switch will poll server2. If user information is not found on the first available server, the authentication request will fail.
• RADIUS servers may each have an additional backup specified through the `aaa radius-server` command.

• Configuring the RADIUS servers to use for 802.1X, MAC, and Captive Portal authentication is required to support authentication and classification of devices connected to Universal Network Profile (UNP) ports.

**Examples**

```
-> aaa device-authentication 802.1x rad1
-> aaa device-authentication 802.1x rad1 rad2
-> no aaa device-authentication 802.1x

-> aaa device-authentication mac rad1
-> aaa device-authentication mac rad1 rad2
-> no aaa device authentication mac

-> aaa device-authentication captive-portal rad1
-> aaa device-authentication captive-portal rad1 rad2
-> no aaa device-authentication captive-portal
```

**Release History**

Release 7.2.1; command was introduced.
Release 7.3.4; **802.1x** parameter added.
Release 8.1.1; **captive-portal** parameter added.

**Related Commands**

- `aaa radius-server` Configures or modifies a RADIUS server for authenticated switch access or device authentication.
- `unp port-type` Enables or disables UNP port-based access control on a port.
- `show aaa device-authentication` Displays a list of RADIUS servers assigned to provide 802.1X or MAC authentication.

**MIB Objects**

AaaAuthDATable
  - `aaaDaName1`
  - `aaaDaName2`
  - `aaaDaName3`
  - `aaaDaName4`
aaa accounting

Configures RADIUS server accounting or local Switch Logging (syslog) accounting for 802.1X, MAC, and Captive Portal authenticated device sessions. Accounting servers keep track of network resources (time, packets, bytes, etc.) and user activity.

```
aaa accounting {802.1x | mac | captive-portal} {server1 [server2...] | syslog ip_address [port udp_port]}
no accounting {802.1x | mac | captive-portal}
```

Syntax Definitions

- **802.1x** Enables the specified RADIUS or syslog server to log accounting of 802.1X authenticated sessions.
- **mac** Enables the specified RADIUS or syslog server to log accounting for MAC authenticated sessions.
- **captive-portal** Enables the specified RADIUS or syslog server to log accounting for Captive Portal authenticated sessions.
- **server1** The name of the RADIUS server used for accounting of authenticated switch sessions. At least one server is required. RADIUS server names are configured through the `aaa radius-server` command.
- **server2...** The names of backup servers. Up to 3 backups may be specified; each server name should be separated by a space. These backups are only used if `server1` becomes unavailable. They are polled in the order they are listed in this command. The first available server becomes the accounting server.
- **ip_address** The IP network address for syslog accounting.
- **udp_port** The UDP port number for syslog accounting.

Defaults

By default, no RADIUS server or syslog accounting is configured for the switch.

```
<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>udp_port</td>
<td>514</td>
</tr>
</tbody>
</table>
```

Platforms Supported

This command is supported on the following OmniSwitch platforms:

```
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>802.1x</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>
```
Usage Guidelines

- Use the **no** form of the command to disable accounting for device authentication sessions.
- Up to 4 RADIUS accounting servers (total) may be specified. At least one server is required. Each server name should be separated by a space.
- The switch uses **only the first available server** in the list for accounting. For example, if server1 is not available, the switch will use server2.
- Accounting with the local syslog facility is not allowed if RADIUS accounting is already configured. In other words, configure either RADIUS or syslog accounting.
- RADIUS servers may each have an additional backup specified through the **aaa radius-server** command.

Examples

```
-> aaa accounting 802.1x rad1
-> aaa accounting 802.1x rad1 rad2 rad3 rad4
-> aaa accounting 802.1x syslog 10.135.67.99 port 8000
-> no aaa accounting 802.1x

-> aaa accounting mac rad1
-> aaa accounting mac rad1 rad2
-> aaa accounting mac syslog 10.135.67.99 port 8000
-> no aaa accounting mac

-> aaa accounting captive-portal rad1
-> aaa accounting captive-portal rad1 rad2 rad3
-> aaa accounting captive-portal syslog 10.135.67.99 port 8000
-> no aaa accounting captive-portal
```

Release History

Release 8.1.1; command was introduced.

Related Commands

- `show aaa accounting` Displays the accounting server configuration for the switch.

MIB Objects

```
aaaAcctDATable
  aaacdInterface
  aaacdName1
  aaacdName2
  aaacdName3
  aaacdName4
  aaacdSyslogIPAddrType
  aaacdSyslogIPAddr
  aaacdSyslogUdpPort
```
aaa accounting radius calling-station-id

Configures the RADIUS Calling-Station-Id attribute for the specified accounting session type.

```
aaa accounting {802.1x | mac | captive-portal} radius calling-station-id {mac-address | ip-address}
```

**Syntax Definitions**

- **802.1x**  
  Configures the attribute for 802.1X accounting sessions.
- **mac**  
  Configures the attribute for MAC accounting sessions.
- **captive-portal**  
  Configures the attribute for Captive Portal accounting sessions.
- **mac-address**  
  Sets the Calling Station ID to the MAC address of the user.
- **ip-address**  
  Sets the Calling Station ID to the IP address of the user.

**Defaults**

By default, the RADIUS Calling-Station-Id attribute value is set to the MAC address of the user.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Configuring the Calling-Station-Id attribute is not allowed if the accounting server configuration is set to use local Switch Logging (syslog) for the specified accounting session type (802.1x, MAC, or Captive Portal).
- The Calling Station ID attribute is defined in a RADIUS Accounting-Request message that is sent to the RADIUS accounting server.

**Examples**

- `-> aaa accounting 802.1x radius calling-station-id ip-address`
- `-> no aaa accounting 802.1x radius calling-station-id ip-address`
- `-> aaa accounting 802.1x radius calling-station-id mac-address`

- `-> aaa accounting mac radius calling-station-id ip-address`
- `-> no aaa accounting mac radius calling-station-id ip-address`
- `-> aaa accounting mac radius calling-station-id mac-address`

- `-> aaa accounting captive-portal radius calling-station-id ip-address`
- `-> no aaa accounting onex radius calling-station-id ip-address`
- `-> aaa accounting captive-portal radius calling-station-id mac-address`
**Release History**

Release 8.1.1; command was introduced.

**Related Commands**

- `show aaa accounting` Displays the AAA accounting configuration.

**MIB Objects**

- `aaaAcctDATable`
  - `aaacdInterface`
  - `aaacdCallingStationId`
aaa 802.1x re-authentication

Configures the automatic re-authentication of authenticated 802.1X users.

`aaa 802.1x re-authentication {enable | disable | interval seconds | trust-radius {enable | disable}}`

**Syntax Definitions**

- **enable** Enables re-authentication of 802.1X users.
- **disable** Disables re-authentication of 802.1X users.
- **seconds** The amount of time the switch waits before triggering re-authentication of 802.1X users. The valid range is 600–7200 seconds.
- **trust-radius enable** Directs the switch to use the Session-Timeout attribute value for the re-authentication time interval. This attribute is returned from the RADIUS server in an Accept-Accept message.
- **trust-radius disable** Directs the switch to use the locally configured re-authentication time interval value.

**Defaults**

By default, 802.1X re-authentication is disabled for the switch. When re-authentication is enabled, the following default values apply:

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>3600</td>
</tr>
<tr>
<td>trust-radius enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- The re-authentication time interval is triggered when 802.1X re-authentication is enabled.
- When the re-authentication time interval is changed, the new value does not apply to existing authenticated 802.1X users until the user is flushed out or when the user is authenticated again. Any new 802.1X users are re-authenticated based on the current time interval setting.
- When the trust RADIUS option is enabled, the Session-Timeout attribute value received from the RADIUS server overrides the locally configured value for the switch.
AAA profile settings for 802.1x re-authentication take precedence over global 802.1x re-authentication settings configured with this command. For example, if the global trust RADIUS option is enabled and the AAA profile trust RADIUS option is disabled (the default), the trust RADIUS status is disabled on the UNP port when the AAA profile is assigned to that port.

**Examples**

-> aaa 802.1x re-authentication enable
-> aaa 802.1x re-authentication enable interval 7200
-> aaa 802.1x re-authentication enable trust-radius enable
-> aaa 802.1x re-authentication enable interval 7200 trust-radius enable
-> aaa 802.1x re-authentication interval 7200 trust-radius disable
-> aaa 802.1x re-authentication disable

**Release History**

Release 8.1.1; command was introduced.

**Related Commands**

*show aaa config* Displays the global AAA parameter configuration for 802.1X sessions.

**MIB Objects**

alaAaaAuthConfig
alaAaaOnexReAuthStatus
alaAaaOnexReAuthIntrvl

aaa interim-interval

Configures the amount of time between each interim accounting update for any given session.

```
aaa {802.1x | mac | captive-portal} interim-interval seconds [trust-radius {enable | disable}]
```

### Syntax Definitions

- **802.1x**
  - Configures the interim interval value for 802.1X accounting sessions.

- **mac**
  - Configures the interim interval value for MAC accounting sessions.

- **captive-portal**
  - Configures the interim interval value for Captive Portal accounting sessions.

- **seconds**
  - The amount of time between each interim accounting update. The valid range is 60–1200 seconds.

- **trust-radius enable**
  - Directs the switch to use the Acct-Interim-Interval attribute value for the interim time interval. This attribute is returned from the RADIUS server in an Accept-Accept message.

- **trust-radius disable**
  - Directs the switch to use the locally configured interim time interval value.

### Defaults

By default, the accounting interim interval value is set to 600 seconds.

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>trust-radius enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6/</th>
<th>6900 X48C4E/V48C8/</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- When the trust RADIUS option is enabled, the accounting interim interval value received from the RADIUS server overrides the locally configured value for the switch.

- When the accounting interim interval is changed, the new value does not apply to existing authenticated users until the user is flushed out or when the user is authenticated again.

### Examples

```
-> aaa 802.1x interim-interval 1200
-> aaa 802.1x interim-interval 1200 trust-radius enable
```
AAA Commands

-> aaa 802.1x interim-interval 1200 trust-radius disable
-> aaa mac interim-interval 1200
-> aaa mac interim-interval 1200 trust-radius enable
-> aaa mac interim-interval 1200 trust-radius disable

-> aaa captive-portal interim-interval 1200
-> aaa captive-portal interim-interval 1200 trust-radius enable
-> aaa captive-portal interim-interval 1200 trust-radius disable

**Release History**

  - alaAaaCpIntrmIntvl
  - alaAaaCpIntmIntvlTrstRadStatus
aaa session-timeout

Configures whether or not an authenticated user is automatically logged out of the network based on a session timeout value.

`aaa {mac | captive-portal} session-timeout {enable | disable} [interval seconds] [trust-radius {enable | disable}]`

### Syntax Definitions

- **mac**: Configures the session timeout parameter for authenticated MAC users.
- **captive-portal**: Configures the session timeout parameter for authenticated Captive Portal users.
- **session-timeout enable**: Enables the session timeout timer for authenticated user sessions.
- **session-timeout disable**: Disables the session timeout timer for authenticated user sessions.
- **seconds**: The session timeout value. The valid range is 300–172800 seconds.
- **trust-radius enable**: Directs the switch to use the Session-Timeout attribute returned from the RADIUS server in an Accept-Accept message.
- **trust-radius disable**: Directs the switch to use the locally configured timeout interval value.

### Defaults

By default, the session timer is disabled for the switch.

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>seconds</code></td>
<td>43200 seconds</td>
</tr>
<tr>
<td></td>
<td>(12 hours)</td>
</tr>
<tr>
<td>`trust-radius enable</td>

</table>

### Usage Guidelines

- The session timeout parameter is configurable only for MAC and Captive Portal authentication sessions. When 802.1x re-authentication is enabled, the session timeout is set to 43200 seconds by default.
- The timeout interval is triggered when the session timeout parameter is enabled for the switch.
• When the trust RADIUS option is enabled, the timeout interval value received from the RADIUS server overrides the locally configured value for the switch.

• When the session timeout interval is changed, the new value does not apply to existing authenticated users until the user is flushed out or when the user is authenticated again.

• When the session timeout value is reached, the authenticated users are logged out and the MAC address for each logged out user device is flushed.

Examples

-> aaa mac session-timeout enable interval 13000
-> aaa mac session-timeout enable interval 14000 trust-radius enable
-> aaa mac session-timeout disable

-> aaa captive-portal session-timeout enable interval 13000
-> aaa captive-portal session-timeout enable interval 14000 trust-radius enable
-> aaa captive-portal session-timeout disable

Release History
Release 8.1.1; command was introduced.

aaa session console

Enables or disables switch access through the console port of the switch.

```
aaa session console {enable | disable}
```

**Syntax Definitions**

- `enable`: Enables the switch access through the console port through the CLI shell.
- `disable`: Disables the switch access through the console port through the CLI shell.

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
</tr>
</thead>
<tbody>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- It is recommended to create a back-up of the configuration file before using this command. Contact customer support to recover the switch.

- Before disabling the CLI console shell, configuration for telnet or SSH access with proper user privilege must be made.

- When the CLI console shell is disabled, the switch log output to the console is also disabled.

- When the CLI console shell is disabled, the switch can be accessed through SSH or telnet or WebView session.

- The command can be stored to the configuration file using `write memory`.

- If the console access is disabled through configuration (on both working and certified directory) and the telnet/SSH/WebView session is also not available to the switch, contact customer support to recover the switch.

**Note.** Deleting the configuration file will also delete the other configurations. Hence, it is recommended to create a back-up of the configuration file before deleting the configuration file.
• In a virtual chassis, the command must be used only on the master chassis; the console on master and all slaves will be disabled/enabled accordingly.

**Examples**

-> session console disable
-> session console enable

**Release History**

Release 8.6R2; command introduced.

**Related Commands**

*show aaa session console config*  Displays Session Manager information, such as banner file name, session timeout value, and default prompt value.

**MIB Objects**

`alaAaaConsoleAccessConfig
alaAaaConsoleAccessAdminState`
aaa inactivity-logout

Configures whether or not an authenticated user is automatically logged out of the network after a specific period of inactivity.

```
aaa {mac | captive-portal} inactivity-logout {enable | disable} [interval seconds]
```

**Syntax Definitions**

- **mac**: Configures the inactivity logout timer for authenticated MAC users.
- **captive-portal**: Configures the inactivity logout timer for authenticated Captive Portal users.
- **enable**: Enables the inactivity logout timer for the specified authentication type.
- **disable**: Disables the inactivity logout timer for the specified authentication type.
- **seconds**: The inactivity logout time. The valid range is 60–1200 seconds, or enter 0 to indicate that an authenticated user should never be logged out.

**Defaults**

By default, the inactivity logout timer is disabled for the switch.

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>600 seconds</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- The inactivity logout timer is configurable only for MAC and Captive Portal authentication sessions.
- The timer is triggered when the inactivity logout parameter is enabled for the switch.
- Make sure the configured inactivity logout time is set to a value greater than the MAC address aging time for the switch.
- If a specific time is configured for the inactivity logout timer, the user is not logged out of the network even if the MAC address for the user device ages out before the inactivity logout timer value expires.
- Setting the inactivity logout time to zero helps prevent silent devices from getting automatically logged out; the silent device will always remain logged in.
- When the inactivity logout time is changed, the new value does not apply to existing authenticated users until the user is flushed out or when the user is authenticated again.
• If a user undergoes MAC authentication and then secondary Captive Portal authentication, the higher of the two inactivity logout timer values is applied to the device.

**Examples**

```bash
-> aaa mac inactivity-logout enable
-> aaa mac inactivity-logout enable interval 600
-> aaa mac inactivity-logout enable interval 0
-> aaa mac inactivity-logout disable

-> aaa captive-portal inactivity-logout enable
-> aaa captive-portal inactivity-logout enable interval 600
-> aaa captive-portal inactivity-logout enable interval 0
-> aaa captive-portal inactivity-logout disable
```

**Release History**

Release 8.1.1; command was introduced.
Release 8.4.1.R02; setting the inactivity logout time to zero is supported (user is never logged out).

**Related Commands**

`show aaa config` Displays the global AAA parameter configuration for device authentication and accounting sessions.

```
aaa radius nas-port-id

Configures the RADIUS client NAS-Port attribute for authentication and accounting sessions.

aaa radius nas-port-id {user-string string | default}

### Syntax Definitions

- **string**: A text string (up to 31 characters) used to define a NAS-Port identifier for the NAS-Port attribute.
- **default**: Sets the NAS-Port attribute value to the chassis/slot/port of the user.

### Defaults

By default, the NAS-Port attribute is set to the user port (chassis/slot/port).

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

The NAS-Port attribute value specified with this command is used in Account-Request messages and in Accounting-Request messages.

### Examples

- `-> aaa radius nas-port-id default`
- `-> aaa radius nas-port-id user-string nasport`

### Release History

Release 8.1.1; command was introduced.

### Related Commands

- **show aaa radius config**: Displays the global RADIUS client attribute configuration.

### MIB Objects

- `alaAaaClientAttrGroup`  
- `alaAaaRadNasPortId`
aaa radius nas-identifier

Configures the RADIUS client NAS-Identifier attribute for authentication and accounting sessions.

aaa radius nas-identifier {user-string string | default}

**Syntax Definitions**

- **string**
  - A text string (up to 31 characters) used to identify the switch (RADIUS client) in the NAS-Identifier attribute.

- **default**
  - Sets the NAS-Identifier attribute to the system name of the switch.

**Defaults**

By default, the NAS-Identifier attribute is set to the system name of the switch.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

The NAS-Identifier attribute value specified with this command is used in both Account-Request and Accounting-Request messages.

**Examples**

- `-> aaa radius nas-identifier default`
- `-> aaa radius nas-identifier user-string os6860`

**Release History**

Release 8.1.1; command was introduced.

**Related Commands**

- `show aaa radius config` Displays the global RADIUS client attribute configuration.

**MIB Objects**

alaAaaClientAttrGroup
  - `alaAaaRadNasIdentifier`
aaa radius nas-ip-address

Configure the RADIUS client NAS IP address attribute for the outgoing RADIUS packets.

`aaa radius nas-ip-address {default | local-ip [ip_address]}`

**Syntax Definitions**

- **default**
  Sets the NAS IP address attribute value to the source IP address of the interface used to send the RADIUS packet. In OmniVista Cirrus it will be the VPN IP address.

- **local-ip**
  Sets the NAS IP address attribute value with the DHCP-Client interface IP address as the device identifier.

- **ip_address**
  The IPv4 address for NAS IP address attribute in RADIUS packets.

**Defaults**

By default, the value of NAS IP address is default.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- The NAS IP address attribute value configured will be used in all Authentication-Request messages and in Accounting-Request messages.

- If the Local IP is configured without the optional IP address, then the NAS IP address attribute value will be the DHCP-Client interface IP address.

- If there is no DHCP IP address configured on the switch, then NAS IP address attribute will contain the IP address as per the default behavior.

- If Local IP option is configured with an IP address, then this configured IP address value will be used in the NAS IP address attribute.

**Examples**

- `-> aaa radius nas-ip-address default`
- `-> aaa radius nas-ip-address local-ip`
**Release History**

Release 8.5R4; command was introduced.

**Related Commands**

*show aaa radius config*  
Displays the global AAA attribute values.

**MIB Objects**

alaAaaClientAttrGroup  
  alaAaaRadNasIpAddressMode  
  alaAaaRadNasIpAddressType  
  alaAaaRadNasIpAddress
aaa radius mac-format

Configures the MAC address format to use in the specified RADIUS client attributes.

```
aaa radius mac-format {username | password | calling-station-id | called-station-id} delimiter {char | none} case {uppercase | lowercase}
```

### Syntax Definitions

- **username**: Configures the MAC address format for the User-Name attribute.
- **password**: Configures the MAC address format for the User-Password attribute.
- **calling-station-id**: Configures the MAC address format for the Calling-Station-Id attribute.
- **called-station-id**: Configures the MAC address format for the Called-Station-Id attribute.
- **char**: The delimiter character to use to separate the octets within a MAC address. The valid characters are a space (" "), a hyphen ("-"), or a colon (":"). For example, “e8:e7:32:a4:63:23”, “e8-e7-32-a4-63-23”, or “e8:e7:32:a4:63:23”.
- **none**: No delimiter is used in the MAC address format.
- **uppercase**: Uses uppercase characters in the MAC address format.
- **lowercase**: Uses lowercase characters in the MAC address format.

### Defaults

By default, no delimiter is used and the MAC address characters are in uppercase.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- The MAC address format configured for the User-Name and User-Password attributes is only applied for MAC authentication and accounting, where these attributes are set to the MAC address of the user. The configured format is not applied for 802.1X or Captive Portal authentication and accounting.
- The MAC address format configured for the Called-Station-Id and Calling-Station-Id attributes is applied for MAC, 802.1X, and Captive Portal authentication and accounting sessions when these attributes are set to a MAC address value.
- The Called-Station-Id attribute is set to the base MAC address of the switch.
- The Calling-Station-ID attribute is configurable and can be set to the MAC address or IP address of the user.
Examples

-> aaa radius mac-format username delimiter none case lowercase
-> aaa radius mac-format username delimiter ":" case lowercase

-> aaa radius mac-format password delimiter none case lowercase
-> aaa radius mac-format password delimiter ":" case lowercase
-> aaa radius mac-format calling-station-id delimiter none case lowercase
-> aaa radius mac-format calling-station-id delimiter ":" case lowercase

-> aaa radius mac-format called-station-id delimiter none case lowercase
-> aaa radius mac-format called-station-id delimiter ":" case lowercase

Release History

Release 8.1.1; command was introduced.

Related Commands

aaa accounting radius calling-station-id
Sets the Calling-Station-Id attribute to the MAC address or IP address of the user for accounting sessions.

aaa profile

Configures an AAA profile that is used to define and apply specific AAA parameter values to Universal Network Profile (UNP) Edge ports, link aggregates, or an Access Guardian Captive Portal profile. This section describes the base command (aaa profile profile_name) along with the other command keywords that are used to configure AAA parameter values that are applied when the profile is assigned to a UNP port or link aggregate.

`aaa profile profile_name`

[device-authentication {802.1x | mac | captive-portal} server1 [server2] [server3] [server4]]

[accounting {802.1x | mac | captive-portal} {server1 [server2... | syslog ip_address}

[accounting {802.1x | mac | captive-portal} radius calling-station-id {mac-address | ip-address}]

[802.1x re-authentication {enable | disable} [interval seconds] [trust-radius {enable | disable}]]

[802.1x | mac | captive-portal] interim-interval seconds [trust-radius {enable | disable}]

[mac | captive-portal] session-timeout {enable | disable} [interval seconds] [trust-radius {enable | disable}]

[mac | captive-portal] inactivity-logout {enable | disable} [interval seconds]

[radius nas-port-id {user-string string | default}]

[radius nas-identifier {user-string string | default}]

[radius nas-ip-address {default | local-ip [ip_address]}]

[radius mac-format {username | password | calling-station-id | called-station-id} delimiter {char | none} case {uppercase | lowercase}]

no aaa profile profile_name

---

Syntax Definitions

`profile_name`  The name to associate with the AAA configuration profile.

Defaults

The AAA profile parameters are set to the same default values that are set when the explicit AAA command is used to configure the parameter value. See the show aaa profile command output example in the “Examples” section of this command page to determine default values for AAA profile parameters.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>

<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- Use the `no` form of this command to remove the AAA profile from the switch configuration.

- Creating the template name with the base command (`aaa profile profile_name`) is required before attempting to configure profile parameter values.

- When an AAA profile is assigned to a UNP port, the parameter values defined in the profile will override any existing global AAA configuration for users authenticating on that port.

- When an AAA profile is assigned to a Captive Portal profile, the parameters values defined in the AAA profile will override any existing global AAA configuration for users authenticated through the Captive Portal profile configuration.

- For more information about specific AAA parameter values, refer to the following explicit AAA configuration commands for each profile parameter option:

<table>
<thead>
<tr>
<th>AAA Profile Parameter</th>
<th>Explicit Port Configuration Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>[device-authentication {802.1x</td>
<td>mac</td>
</tr>
<tr>
<td>[accounting {802.1x</td>
<td>mac</td>
</tr>
<tr>
<td>[radius device-authentication 802.1x re-authentication {enable</td>
<td>disable} [interval seconds] [trust-radius {enable</td>
</tr>
<tr>
<td>[mac</td>
<td>captive-portal] interim-interval seconds [trust-radius {enable</td>
</tr>
<tr>
<td>[mac</td>
<td>captive-portal] session-timeout {enable</td>
</tr>
<tr>
<td>[mac</td>
<td>captive-portal] inactivity-logout {enable</td>
</tr>
<tr>
<td>[radius nas-port-id {user-string string</td>
<td>default]}</td>
</tr>
<tr>
<td>[radius nas-identifier {user-string string</td>
<td>default]}</td>
</tr>
<tr>
<td>[radius nas-ip-address {default</td>
<td>local-ip ip_address}]</td>
</tr>
<tr>
<td>[radius mac-format {username</td>
<td>password</td>
</tr>
</tbody>
</table>

**user**

Configures or modifies user entries in the local user database. Use the `no` form of the command to remove the user from the local database.

`user username`

*{password password | password-prompt}*

*expiration {day | date}*

*read-only | read-write [families... | domains... | all | none | all-except [families | domains.... | | macsec]]*

*no snmp | no auth | sha | md5 | sha+des | md5+des | sha+aes | sha224 | sha256 | sha384 | sha224+aes | sha256+aes | sha384+aes]*

*console-only {enable | disable}*

*[priv-password password | prompt-priv-password]*

`no user username`

**Syntax Definitions**

*username*  
The name of the user. Used for logging into the switch. Required to create a new user entry or for modifying a user. Maximum 63 characters.

*password*  
The user’s password in clear text or hexadecimal (corresponding to encrypted form). Required to create a new user entry. Maximum 30 characters.

*password-prompt*  
This option allows to enter the password in a obscured format rather than as clear text. Select this option with the ‘user’ command to configure the password for the user. When this option is selected, a password prompt appears and the password can be provided. Password needs to be re-entered, and only if both the passwords match, command is accepted. The password provided in this mode is not displayed on the CLI as text.

*day*  
The number of days before this user’s current password expires. The range is 1 to 150 days.

*date*  
The date (in the format *mm/dd/yyyy*) that the user’s current password will expire.

*read-only*  
Specifies that the user will have read-only access to the switch.

*read-write*  
Specifies that the user will have read-write access to the switch.

*families*  
Determines the command families available to the user on the switch. Each command family should be separated by a space. Command families are subsets of domains.

*domains*  
Determines the command domains available to the user on the switch. Each domain should be separated by a space.

*all*  
Specifies that all command families and domains are available to the user.

*none*  
Specifies that no command families or domains are available to the user.

*all-except*  
Specifies that functional privilege for families or domains followed by 'all-except' are disabled to the user.
By default, if a user is created without indicating the read and write privileges and SNMP access, the user will be given privileges based on the default user account. The default user account may be modified.

**Defaults**

- By default, if a user is created without indicating the read and write privileges and SNMP access, the user will be given privileges based on the default user account. The default user account may be modified.
By default, the password will be encrypted using SHA for all non SNMP users.

For SNMP users without authentication, password will be encrypted with SHA.

For SNMP users with authentication, it will be encrypted with the authentication method set for the user. If user is created with MD5, then it will be still encrypted with MD5.

Users created with SHA2 authentication algorithm cannot be used for SNMP authentication.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- At least one user with SHA/MD5 authentication and/or DES encryption must be configured on the switch for SNMPv3 communication with OmniVista.

- Note that the exclamation point ‘!’ is not a valid password character. In addition, specifying an asterisk (*) as one or more characters in a password is allowed as long as every character is not an asterisk. For example, password **123456** is allowed; password ******** is not allowed.

- Some special characters are interpreted as a Linux shell variable by the switch when being used in a password. They can still be used in a password but they must be escaped (\') or the entire password enclosed in single quotes. For example, to use the ‘$’ as part of a password the following should be entered:

  -> user test password test\$1234

  or

  -> user test password ‘test$1234’

  these passwords will be interpreted as test$1234.

- An alternative method is to use the password-prompt parameter when using special characters in a password. The password-prompt parameter exits the Linux shell and special characters are no longer interpreted as shell variables. The following characters are the majority of characters considered special characters by the switch [" " (white space), $, "", \#, [, ], <, >, ;, {, }, 0, ~, ].

- A password expiration for the user’s current password may be configured with the expiration option. However, if the password is changed, or the global password expiration setting is configured with the user password-expiration command, the user’s password expiration will be configured with the global expiration setting.

- When modifying a user’s SNMP access, the user password must be re-entered (or a new one configured). This is required because the hash algorithm used to save the password in the switch depends on the SNMP authentication level.
At initial startup, the default user on the switch is **admin** with a password of **switch**. The switch will not recreate this user at any successive startup as long as there exists at least one user defined with write access to all commands. (Note that if password expiration is configured for the **admin** user, or configured globally through the **user password-expiration** command, when the **admin** user’s password expires, the **admin** user will have access only through the console port.)

New users or updated user settings are saved automatically.

After changing the **priv-password** it could take up to 5 minutes to become effective.

The **priv-password** token is accepted only when SNMP level with encryption is configured for the user. If SNMP level with encryption is not selected and **priv-password** is configured, then CLI command is rejected with error.

If **priv-password** is not configured for the user with encryption SNMP level, then the user password parameter is used for **priv-password** (both for authentication/encryption).

Password policy is not applicable for the new optional parameter **priv-password**.

For authenticating switch access through other access types such as telnet, FTP, SSH the existing user password will be used irrespective of whether **priv-password** is configured or not.

When the SNMP level for an existing user with **priv-password** configured is changed from one encryption level to another encryption level, then the previously configured **priv-password** will not be used with the new SNMP level. **Priv-password** needs to be configured again when SNMP level is changed for an existing user.

Only users with MACsec read-write privilege can configure MACsec. Use ‘**user**’ command to enable MACsec read-write permissions to the users. The privilege can be configured by family or by security domain.

**Examples**

```
-> user techpubs password writer_pass read-only config
-> user techpubs password-prompt
Enter Password: *******
Confirm Password: *******

-> user techpubs password writer_pass read-write all sha256

The following example creates a user with read-write privileges for all families except aaa.
-> user techpubs password writer_pass read-write all-except aaa
-> no user techpubs

-> user snmpv3user password pass1pass1 priv-password priv1priv1 read-write all sha+aes

-> user snmpv3user password pass1pass1 prompt-priv-password
Enter Priv-Password: *********
Confirm Priv-Password: *********
```

**Release History**

Release 7.1.1; command was introduced.
Release 8.3.1; **password-prompt**, **all-except**, **priv-password**, **prompt-priv-password** parameter added, **sha224** and **sha256** algorithm support added.
Release 8.7 R01; Support for sha384, sha224+aes, sha256+aes, and sha384+aes added.
Release 8.9R1; macsec keyword added.

Related Commands

password
  Configures the current user’s password.
show user
  Displays information about users configured in the local database.

  aaauPasswordExpirationDate
password

Configures the current user’s password.

password

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- If the snapshot command is used to capture the switch configuration, the text of the password is not displayed in the file. Instead an authentication key is included in the file.

- A new password cannot be identical to the current password; it cannot be identical to any of the three passwords that preceded the current password.

- Note that the exclamation point (!) is not a valid password character. In addition, specifying an asterisk (*) as one or more characters in a password is allowed as long as every character is not an asterisk. For example, password **123456** is allowed; password ******** is not allowed.

- Password settings are saved automatically.

Examples

-> password
enter old password: ********
enter new password: *********
reenter new password: *********
->

Release History

Release 7.1.1; command was introduced.

</tr>
</tbody>
</table>

### Usage Guidelines

- The **user password-expiration** command sets a default password expiration for users configured locally on the switch.

- Password expiration may be configured on a per-user basis through the **user** command; the user setting overrides the **user password-expiration** setting until the user password is changed or the **user password-expiration** command is entered again.

### Examples

```
-> user password-expiration 2
-> user password-expiration disable
```

### Release History

Release 7.1.1; command was introduced.
**Related Commands**

**user**  
Configures entries in the local user database. May be used by a system administrator to change any user’s password in addition to configuring user privileges.

**show user password-policy**  
Displays the global password policy configuration for the switch.

**MIB Objects**

- `aaaAsaConfig`
  - `aaaAsaDefaultPasswordExpirationInDays`
**user allow-ssh**

This command enables or disables SSH access to the switch to a specific user.

```bash
user username allow-ssh {enable | disable}
```

**Syntax Definitions**

- `username` The name of the user. Used for logging into the switch. Required to create a new user entry or for modifying a user. Maximum 63 characters.
- `enable` Enable SSH access to the switch.
- `disable` Disables SSH access to the switch.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>enable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

- `show user password-policy` Displays the global password policy configuration for the switch.
**MIB Objects**

aaaAsaConfig

aaaAsaPasswordHistory
**user password-min-age**

Configures the minimum number of days during which a user is prevented from changing a password.

```
user password-min-age days
```

### Syntax Definitions

```
days
```

The number of days to use as the minimum age of the password. The range is 0–150.

### Defaults

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>days</td>
<td>0</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>

</tbody>
</table>

Usage Guidelines

- This command is only available to the admin user because the admin user account is the only account protected from any type of lockout attempt.
- Specify 0 with this command to disable the observation window function. This means that failed login attempts will never age out; the number of failed attempts is never decremented.
- Do not configure an observation window time period that is greater than the lockout duration time period.
- If the number of failed login attempts exceeds the number of failed attempts allowed before the observation window time expires, then the user account is locked out of the switch.
- The observation window time period is a global lockout setting that is applied to all passwords configured on the switch.
- Lockout settings are saved automatically.

Examples

-> user lockout-window 500
-> user lockout-window 0

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

</tr>
</tbody>
</table>

**MIB Objects**

aaaAsaConfig
  aaaAsaLockoutWindow
**user lockout-threshold**

Configures the number of failed password login attempts allowed during a certain period of time (observation window). If the number of failed attempts equals the lockout threshold number before the observation window period expires, the user account is locked out.

`user lockout-threshold number`

### Syntax Definitions

- **number**: The number of failed login attempts allowed. The range is 0–999.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>number</td>
<td>0</td>
</tr>
</tbody>
</table>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- This command is only available to the `admin` user because the `admin` user account is the only account protected from any type of lockout attempt.
- If the lockout threshold is set to zero (the default), there is no limit to the number of failed login attempts allowed.
- A user account remains locked out for the length of the lockout duration time period; at the end of this time, the account is automatically unlocked.
- If the lockout duration time period is set to zero, only the `admin` user or a user with read/write AAA privileges can unlock a locked user account. An account is unlocked by changing the user account password or with the `user lockout unlock` command.
- The lockout threshold time period is a global lockout setting that is applied to all passwords configured on the switch.
- Lockout settings are saved *automatically*; that is, these settings do not require the `write memory`, `reload slot`, or `configuration snapshot` command to save user settings over a reboot.

### Examples

```
-> user lockout-threshold 3
```
user lockout-threshold 0

Release History
Release 7.1.1; command was introduced.

Related Commands
- **user lockout-window**
  Configures a window of time during which failed login attempts are counted to determine if the number of failed attempts has exceeded the number of allowed attempts.
- **user lockout-duration**
  Configures the length of time a user account remains locked out of the switch.
- **user lockout unlock**
  Manually locks or unlocks a user account on the switch.
- **show user lockout-setting**
  Displays the global user lockout settings for the switch.

MIB Objects
- **aaaAsaConfig**
  - **aaaAsaLockoutThreshold**
**user lockout-duration**

Configures the length of time a user account remains locked out of the switch. At the end of this time period, the user account is automatically unlocked.

**user lockout-duration** minutes

---

**Syntax Definitions**

*minutes* The number of minutes the user account remains locked out. The range is 0–99999.

---

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>minutes</td>
<td>0</td>
</tr>
</tbody>
</table>

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>

<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- This command is only available to the *admin* user because the *admin* user account is the only account protected from any type of lockout attempt.
- Note that if the lockout duration time period is set to zero (the default), then locked user accounts are never automatically unlocked.
- Only the *admin* user or a user with read/write AAA privileges can unlock a locked user account when the lockout duration time is set to zero. An account is unlocked by changing the user password or with the *user lockout unlock* command.
- Do not configure a lockout duration time period that is less than the amount of time configured for the observation window.
- The lockout duration time period is a global lockout setting that is applied to all passwords configured on the switch.
- Lockout settings are saved automatically; that is, these settings do not require the *write memory*, *reload slot*, or *configuration snapshot* command to save user settings over a reboot.

**Examples**

```plaintext
-> user lockout-duration 60
```
-> user lockout-duration 0

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- **user lockout-window**
  Configures a window of time during which failed login attempts are counted to determine if the number of failed attempts has exceeded the number of allowed attempts.

- **user lockout-threshold**
  Configures the number of failed password attempts allowed before the user account is locked out of the switch.

- **user lockout unlock**
  Manually locks or unlocks a user account on the switch.

- **show user lockout-setting**
  Displays the global user lockout settings for the switch.

**MIB Objects**

- **aaaAsaConfig**
  - **aaaAsaLockoutDuration**
**user lockout unlock**

Manually locks or unlocks a user account on the switch.

`user username {lockout | unlock}`

### Syntax Definitions

- **username**: The username of the account to lock or unlock.
- **lockout**: Locks the user account out of the switch.
- **unlock**: Unlocks a locked user account.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- This command is only available to the **admin** user or a user with read/write AAA privileges.
- The **admin** user account is protected from any type of lockout attempt.
- User lockouts and unlocks are saved automatically.

### Examples

```
-> user j_smith lockout
-> user j_smith unlock
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

- **show user**: Displays information about all users or a particular user configured in the local user database on the switch.
- **show user lockout-setting**: Displays the global user lockout settings for the switch.
MIB Objects

aaaUserTable
  aaaPasswordLockoutEnable
**show aaa server**

Displays information about a particular AAA server or AAA servers.

```bash
show aaa server [server_name]
```

### Syntax Definitions

- **server_name**: The server name, which is defined through the `aaa radius-server`, `aaa tacacs+-server`, or `aaa ldap-server` commands.

### Defaults

- N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

show aaa server statistics

Displays the authorization, authentication, accounting, and BYOD statistics for the specified RADIUS server.

show aaa server server_name statistics

Syntax Definitions

server_name
The name of the RADIUS server for which statistics will be displayed.

Defaults
N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- This command applies only to RADIUS servers known to the switch (servers are identified through the aaa radius-server command).

- All statistics displayed for authorization, authentication, and accounting are displayed as an aggregate of the primary and back-up RADIUS server; separate statistics are not displayed for the primary server and the back-up server.

- Use the aaa radius-server clear-statistics command to reset all the statistics counters to zero.

Examples

-> show aaa server rad2 statistics
Statistics for rad2:

show aaa device-authentication

Displays a list of RADIUS servers assigned to provide 802.1X, MAC, or Captive Portal authentication.

`show aaa device-authentication [802.1x | mac | captive-portal]`

**Syntax Definitions**

- **802.1x** Displays the servers used for 802.1X authentication.
- **mac** Displays the servers used for MAC authentication.
- **captive-portal** Uses the servers used for Captive Portal authentication.

**Defaults**

By default, all assigned servers are displayed.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use the optional **802.1x**, **mac**, or **captive-portal** parameters to display the servers assigned to provide the specified type of authentication.

**Examples**

```shell
-> show aaa device-authentication
Authentication type = mac
Authentication Server:
  1st authentication server = cppm,
  2nd authentication server = rad1
  3rd authentication server = rad2,
  4th authentication server = rad3

Authentication type = 802.1x
Authentication Server:
  1st authentication server = cppm,
  2nd authentication server = rad1

Authentication type = captive-portal
Authentication Server:
  1st authentication server = cppm,
  2nd authentication server = rad1
```
AAA Commands

show aaa device-authentication

## Output Definitions

<table>
<thead>
<tr>
<th>Authentication Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Authentication type</td>
<td>The type of authentication the server is assigned to provide (802.1x, mac, or captive-portal)</td>
</tr>
<tr>
<td>1st authentication server</td>
<td>The first server to be polled for authentication information. Any backup servers are also displayed on subsequent lines.</td>
</tr>
</tbody>
</table>

## Release History

Release 7.2.1; command was introduced.
Release 7.3.4; 802.1x and mac parameters added.
Release 8.1.1; captive-portal parameter added.

## Related Commands

- **aaa device-authentication**  
  Configures the RADIUS server to use for 802.1X or MAC authentication.

## MIB Objects

  - aaaDaName4

---

**show aaa accounting**

Displays information about accounting servers configured for authenticated switch access and device authentication sessions. Accounting servers keep track of network resources (time, packets, bytes, etc.) and user activity.

**show aaa accounting [802.1x | mac | captive-portal]**

---

**Syntax Definitions**

- **802.1x**: Displays the RADIUS or syslog server used to log accounting for 802.1X authenticated sessions.
- **mac**: Displays the RADIUS or syslog server used to log accounting for MAC authenticated sessions.
- **captive-portal**: Displays the RADIUS or syslog server to log accounting for Captive Portal authenticated sessions.

**Defaults**

By default, the accounting server configuration is displayed for TACACS+ commands and management sessions (Telnet, FTP, console port, HTTP, or SNMP).

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Support</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **802.1x**, **mac**, or **captive-portal** parameters to display the accounting server configuration for a specific type of device authentication.
- If no parameters are entered with this command, the accounting server configuration for authentication sessions and TACACS+ commands is displayed.

**Examples**

```bash
-> show aaa accounting mac
Accounting type = mac
    Accounting Server:
        1st Acctnt Server = rad1,
        2nd Acctnt Server = rad2

-> show aaa accounting 802.1x
Accounting type = 802.1x
    Syslog Acctnt Server:
```

---
AAA Commands show aaa accounting

IP Address = 135.254.163.110,
UDP port = 514

-> show aaa accounting captive-portal
Accounting type = captive-portal
Syslog Acnt Server:
  IP Address = 135.254.163.110,
  UDP port = 514

-> show aaa accounting
Session (telnet, ftp, ...)
  1st accounting server = rad1
Command accounting server
  1st accounting server = server1

Release History

Release 7.1.1; command was introduced.
Release 8.1.1; 802.1x, mac, and captive-portal parameters added.

Related Commands

Usage Guidelines

Use the 802.1x, mac, or captive-portal parameters to display the parameter configuration for a specific type of device authentication.

Examples

-> show aaa 802.1x config
Authentication type = 802.1x
Re-Authentication Timeout:
  Status = enable,
  Interval (sec) = 3600,
  Trust Radius = disable

Accounting Interim:
  Interval (sec) = 600,
  Trust Radius = disable

-> show aaa mac config
Authentication type = mac
Session Timeout:
  Status = disable,
  Interval (sec) = 43200,
  Trust Radius = disable
Inactivity Timeout:
  Status = disable,
  Interval (sec) = 600
Accounting Interim:
  Interval (sec) = 600,
  Trust Radius = disable

-> show aaa captive-portal config
Authentication type = captive-portal
Session Timeout:
  Status = disable,
  Interval (sec) = 43200,
  Trust Radius = disable
Inactivity Timeout:
  Status = disable,
  Interval (sec) = 600
Accounting Interim:
  Interval (sec) = 600,
  Trust Radius = disable

output definitions

<table>
<thead>
<tr>
<th>Authentication type</th>
<th>The type of authentication (802.1x, mac, or captive-portal).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Session Timeout</td>
<td>The parameter values for the AAA session timeout parameter. Does not apply to 802.1X authentication. Configured through the <code>aaa session-timeout</code> command.</td>
</tr>
<tr>
<td>Inactivity Logout</td>
<td>The parameter values for the AAA inactivity logout parameter. Does not apply to 802.1X authentication. Configured through the <code>aaa inactivity-logout</code> command.</td>
</tr>
<tr>
<td>Accounting Interim</td>
<td>The parameter values for the AAA accounting interim parameter. Configured through the <code>aaa interim-interval</code> command.</td>
</tr>
<tr>
<td>Re-authentication Timeout</td>
<td>The parameter values for the AAA 802.1X re-authentication timeout parameter. Does not apply to MAC or Captive Portal authentication. Configured through the <code>aaa 802.1x re-authentication</code> command.</td>
</tr>
</tbody>
</table>

Release History

Release 8.1.1; command was introduced.

Related Commands

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

The MAC address format determines the delimiter character used between MAC address octets and whether or not characters are in uppercase or lowercase. This format is applied only when the RADIUS attribute value is set to a MAC address.

Examples

-> show aaa radius config
RADIUS client attributes:
  NAS port id             = default,
  NAS identifier          = default
  NAS IP address          = default
  MAC format delimiter:
    Username                = none, UsernameCase = uppercase,
    Password                = none, PasswordCase = uppercase,
    calling station id      = none, ClgStaIdCase = uppercase,
    called station id       = none, CldStaIdCase = uppercase
  Unp Profile Precedence  = Filter-Id

output definitions

NAS port id The RADIUS client NAS-Port attribute for authentication and accounting sessions.

NAS identifier The RADIUS client NAS-Identifier attribute for authentication and accounting sessions.
output definitions

<table>
<thead>
<tr>
<th></th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NAS IP address</td>
<td>The RADIUS client NAS-IP address attribute for authentication and accounting sessions.</td>
</tr>
<tr>
<td>MAC format delimiter</td>
<td>The MAC address format used in the specified RADIUS client attributes.</td>
</tr>
<tr>
<td>UNP Profile Precedence</td>
<td>The UNP profile precedence: Filter-ID or Tunnel-Private-Group-ID</td>
</tr>
</tbody>
</table>

Release History

Release 8.1.1; command was introduced.
Release 8.5R4; UNP Profile Precedence and NAS IP address field added.

Related Commands

- **show aaa device-authentication**: Displays the device authentication server configuration.
- **show aaa accounting**: Displays the accounting server configuration.
- **show aaa profile**: Displays the AAA parameter profile configuration.
- **aaa radius nas-ip-address**: Configure the RADIUS client NAS IP address attribute for the outgoing RADIUS packets.

</tbody>
</table>

Read Only for domains

The command domains available with the user’s read-only access. See the table on the next page for a listing of valid domains.

Read/Write for domains

The command domains available with the user’s read-write access. See the table on the next page for a listing of valid domains.

Read Only for families

The command families available with the user’s read-only access. See the table on the next page for a listing of valid families.

Read/Write for families

The command families available with the user’s read-write access. See the table on the next page for a listing of valid families.

Snmp allowed

Indicates whether or not the user is authorized to use SNMP (YES or NO). SNMP is allowed for the user account when SNMP authentication is specified for the account.

Snmp authentication

The level of SNMP authentication, if any, configured for the user. This field only displays if the user is authorized to use SNMP.

Snmp encryption

The level of SNMP encryption, if any, configured for the user. This field only displays if the user is authorized to use SNMP.

Console-Only

Indicates whether or not console only access is enabled or disabled for the user admin.

SSH allowed

Indicates whether or not SSH access to the switch is enabled or disabled for a specific user.

Possible values for command domains and families are listed here:

show user password-policy

Displays the global password settings configured for the switch.

show user password-policy

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

The password policy contains parameter values that define configuration requirements for all passwords that are created on the switch. Use this command to display the current parameter values for the password policy.

Examples

-> show user password-policy
Password Policy:
Password cannot contain username: Yes
Minimum number of English uppercase characters: 6
Minimum number of English lowercase characters: 4
Minimum number of base-10 digit: 2
Minimum number of non-alphanumeric: 3
Minimum size : 8
Password history: 4
Password minimum age: 20 (days)
Password expiration: 100 (days)
**output definitions**

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Password cannot contain username</td>
<td>Indicates if the username is included with the password check (Enable or Disable). Configured through the <code>user password-policy cannot-contain-username</code> command.</td>
</tr>
<tr>
<td>Minimum number of English uppercase characters</td>
<td>The minimum number of uppercase characters required in a password. Configured through the <code>user password-policy cannot-contain-consecutive-characters</code> command.</td>
</tr>
<tr>
<td>Minimum number of English lowercase characters</td>
<td>The minimum number of lowercase characters required in a password. Configured through the <code>user password-policy min-lowercase</code> command.</td>
</tr>
<tr>
<td>Minimum number of base-10 digit</td>
<td>The minimum number of digits required in a password. Configured through the <code>user password-policy min-digit</code> command.</td>
</tr>
<tr>
<td>Minimum number of non-alphanumeric</td>
<td>The minimum number of non-alphanumeric characters required in a password. Configured through the <code>user password-policy min-nonalpha</code> command.</td>
</tr>
<tr>
<td>Minimum size</td>
<td>The minimum number of characters required for the password size. Configured through the <code>super-password</code> command.</td>
</tr>
<tr>
<td>Password history</td>
<td>The maximum number of old passwords retained in the password history. Configured through the <code>user password-history</code> command.</td>
</tr>
<tr>
<td>Password minimum age</td>
<td>The number of days a password is protected from any modification. Configured through the <code>user password-min-age</code> command.</td>
</tr>
<tr>
<td>Password expiration</td>
<td>The default expiration date applied to all passwords. Configured through the <code>user password-expiration</code> command.</td>
</tr>
</tbody>
</table>

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- `show user password-policy` Displays the expiration date for passwords configured for user accounts stored on the switch.

- `aaaAsaDefaultPasswordExpirationInDays`
show user lockout-setting

Displays the global user lockout settings for the switch.

show user lockout-setting

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

The global lockout settings include parameter values that determine the length of a user observation window, the amount of time a locked user remains locked, and the number of failed password login attempts allowed.

Examples

-> show user lockout-setting
Lockout Setting:
Observation window: 30 (minutes)
Duration: 200 (minutes)
Threshold: 20

output definitions

<table>
<thead>
<tr>
<th>Observation window</th>
<th>The amount of time, in minutes, during which the number of failed password login attempts are counted. Configured through the user lockout-window command.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Duration</td>
<td>The amount of time, in minutes, that a locked user account remains locked out of the switch. Configured through the user lockout-duration command.</td>
</tr>
<tr>
<td>Threshold</td>
<td>The maximum number of failed password login attempts allowed before the user is locked out of the switch. Configured through the user lockout-threshold command.</td>
</tr>
</tbody>
</table>
**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

- **user lockout unlock**
  Manually locks or unlocks a user account on the switch.

- **show user**
  Displays information about all users or a particular user configured in the local user database on the switch.

**MIB Objects**

- **aaaAsaConfig**
  - **aaaAsaLockoutWindow**
  - **aaaAsaLockoutDuration**
  - **aaaAsaLockoutThreshold**
show aaa priv hexa

Displays hexadecimal values for command domains/families. Useful for determining how to express command families in hexadecimal; hexadecimal values are used in configuring user privileges in attributes on an external LDAP or RADIUS authentication server.

show aaa priv hexa [domain or family]

Syntax Definitions

domain or family

The CLI command domain or particular command family for which you want to display hexadecimal values. See table in Usage Guidelines.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Domain</th>
<th>Corresponding Families</th>
</tr>
</thead>
<tbody>
<tr>
<td>domain-admin</td>
<td>file telnet dshell debug</td>
</tr>
<tr>
<td>domain-system</td>
<td>system aip snmp rmon webmgmt config</td>
</tr>
<tr>
<td>domain-physical</td>
<td>chassis module interface pmm health</td>
</tr>
<tr>
<td>domain-network</td>
<td>ip rip ospf bgp vrrp ip-routing ipx ipmr ipms</td>
</tr>
<tr>
<td>domain-layer2</td>
<td>vlan bridge stp 802.1q linkagg ip-helper</td>
</tr>
<tr>
<td>domain-service</td>
<td>dns</td>
</tr>
<tr>
<td>domain-policy</td>
<td>qos policy slb</td>
</tr>
<tr>
<td>domain-security</td>
<td>session avlan aaa</td>
</tr>
</tbody>
</table>

- Valid values for the family parameter are listed in the Corresponding Families column of the following table:

- Note that some command families may not be supported depending on the hardware platform you are running.
- If you do not specify a command family, hexadecimal values for all commands sets will display.
- The ‘lanpower’ commands were moved from the ‘module’ family to the ‘lanpower’ family in 8.8R1.
Examples

-> show aaa priv hexa

- file = 0x00000001 0x00000000,

**Usage Guidelines**

It is recommended to save configuration and reboot the switch when the ASA access mode is configured.

**Example**

-> aaa switch-access mode default

-> aaa switch-access mode enhanced

WARNING: Recommended to save configuration and reload the switch upon switch access mode change.

**Release History**

Release 8.3.1; command introduced.
Related Commands

show aaa switch-access mode  Displays the access mode configuration.

MIB Objects

aaaAsaConfig
  aaaAsaAccessMode
aaa switch-access ip-lockout-threshold

Configures the threshold value for failed login attempts from an IP address after which the IP address will be banned from switch access.

aaa switch-access ip-lockout-threshold number

Syntax Definitions

number Set the threshold value for login attempts in the range 0 to 999.

Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>number</td>
<td>6</td>
</tr>
</tbody>
</table>

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- The command is applicable only if ASA enhanced mode is enabled.
- Set the IP threshold value to ‘0’ to disable the IP lockout thresholds.
- IP address is permanently blocked/banned if the number of authentication failures from a particular IP reaches IP lockout threshold limit within two times of the user lockout window.
- Only the switch access will be restricted from the banned IP address. Any IP packet (with monitored port number) destined to a switch IP interfaces will be discarded. IP packets normally bridged/routed by the switch will not be discarded.
- A maximum of 128 IP addresses can be added to the banned list. When the maximum limit has reached, oldest entry from the list is removed to accommodate the new entries.
- User lockout window (user lockout-window) is applicable for IP lockout threshold as well.
- IP lockout threshold shall share the same window as user lockout window, and by default, IP lockout threshold shall be two times that of user lockout window. Since user lockout is giving more priority, the IP lockout threshold must be greater than the user lockout threshold value.
- The IP address will remain blocked until it is released using the command aaa switch-access banned-ip release.
**Example**

-> aaa switch-access ip-lockout-threshold 2

**Release History**

Release 8.3.1; command introduced.

**Related Commands**

- `aaa switch-access mode`  Globally sets the access mode as enhanced or default.
- `show aaa switch-access ip-lockout-threshold` Displays the lockout threshold configured for the remote IP addresses.

**MIB Objects**

- `aaaAsaConfig`  
  `aaaAsaAccessIpLockoutThreshold`
aaa switch-access banned-ip release

Releases the banned IP addresses that are blocked due to failed login attempts.

aaa switch-access banned-ip {all | ip_address} release

Syntax Definitions

- **all**: Release all banned IP addresses from the banned list.
- **ip_address**: Release a specific IP address from the banned list.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

The IP addresses are banned if the failed login count reaches IP lockout threshold limit.

Example

- `-> aaa switch-access banned-ip all release`
- `-> aaa switch-access banned-ip 100.2.45.56 release`

Release History

Release 8.3.1; command introduced.

Related Commands

- `show aaa switch-access banned-ip`: Displays the list of banned IP addresses.

MIB Objects

- `aaaSwitchAccessBannedIpTable`
- `aaaSwitchAccessBannedIpAddress`
- `aaaSwitchAccessBannedIpRowStatus`
**aaa switch-access priv-mask**

Configure the functional privileges mask for the switch access based on the access type on top of the user privilege.

`aaa switch-access priv-mask {console | telnet | ssh | http | https} {read-only | read-write} [families... | domains... | all | none | all-except families...]`

### Syntax Definitions

**read-only**

Specifies that the user will have read-only access to the switch through a specific access type.

**read-write**

Specifies that the user will have read-write access to the switch through a specific access type. The read-write access is allowed only for http, https access types. For other access types (console, telnet, and ssh only) read-only access is allowed.

**families**

Determines the command families available to the user on the switch for a specific access type. Each command family should be separated by a space. Command families are subsets of domains. See Usage Guidelines for more details.

**domains**

Determines the command domains available to the user on the switch for a specific access type. Each domain should be separated by a space. See the Usage Guidelines for more details.

**all**

Specifies that all command families and domains are available to the user for a specific access type.

**none**

Specifies that no command families or domains are available to the user for a specific access type.

**all-except**

Specifies that functional privileges for families followed by 'all-except' are disabled for a specific access type.

### Defaults

By default, the access types are enabled with read-write privileges for all the families.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- The command is applicable only when ASA enhanced mode is enabled.
- The access privileges for the SSH, TELNET, Console, HTTP, HTTPS can be defined.
AAA Commands

- The read-write privilege can be applied only for HTTP and HTTPS access types.
- For SSH, TELNET, and Console, only read-only privilege can be applied.
- Possible values for domains and families are listed in the following table:

<table>
<thead>
<tr>
<th>Domain</th>
<th>Corresponding Families</th>
</tr>
</thead>
<tbody>
<tr>
<td>domain-admin</td>
<td>file telnet debug</td>
</tr>
<tr>
<td>domain-system</td>
<td>system aip snmp rmon webmgt config</td>
</tr>
<tr>
<td>domain-physical</td>
<td>chassis module interface pmm health</td>
</tr>
<tr>
<td>domain-network</td>
<td>ip rip ospf bgp vrrp ip-routing ipmr ipms</td>
</tr>
<tr>
<td>domain-layer2</td>
<td>vlan bridge stp 802.1q linkagg ip-helper</td>

</tr>
<tr>
<td>domain-policy</td>
<td>qos policy slb</td>
</tr>
<tr>
<td>domain-security</td>
<td>session avlan aaa</td>
</tr>
<tr>
<td>domain-mpls</td>
<td>mpls</td>
</tr>
<tr>
<td>domain-datacenter</td>
<td>fips, auto-fabric</td>
</tr>
<tr>
<td>domain-afn</td>
<td>sip-snooping, dpi, app-mon</td>
</tr>
</tbody>
</table>

**Example**

- `aaa switch-access priv-mask ssh read-only webmgt vrrp vrf vlan udld`
- `aaa switch-access priv-mask telnet read-write tftp-client telnet system stp ssh`
- `aaa switch-access priv-mask ssh read-only all-except vlan`
- `aaa switch-access priv-mask telnet read-write all-except ip`

If privileges for specific families need to be applied, then remove the existing privilege using the `no` command, and re-apply the required family privilege.

- `no aaa switch-access priv-mask telnet read-write all`
- `aaa switch-access priv-mask telnet read-write vlan aaa`

**Release History**

Release 8.3.1; command introduced.
Related Commands

- **aaa switch-access mode**
  Globally sets the access mode as enhanced or default.

- **show aaa switch-access priv-mask**
  Displays the privilege details for the access types.

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- The command is applicable only when ASA enhanced mode is enabled.
- When the IP management station is disabled, switch access from any IP address shall be allowed. If there is a login failure (based on the ip-lockout threshold value), the IP address will be banned/ blocked and added to the banned IP address list.
- When the IP management station is enabled, the switch access will be allowed only from those IPs configured in the management station list and only if those are not in banned list.
- It is recommended to enable this command from console since this may terminate the existing session, if enabled through telnet or SSH.

Example

- -> aaa switch-access management-stations admin-state enable
- -> aaa switch-access management-stations admin-state disable

Release History

Release 8.3.1; command introduced.
Related Commands

- **aaa switch-access mode**
  Globally sets the access mode as enhanced or default.

- **aaa switch-access management-stations**
  Configure the management station in the switch, with or without mask value for the corresponding IP of the management station.

- **show aaa switch-access management-stations**
  Displays the list of configured management stations.

MIB Objects

- **aaaSwitchAccessMgmtStationTable**
- **aaaSwitchAccessMgmtStationRowStatus**
aaa switch-access management-stations

Configure the management station in the switch, with or without mask value for the corresponding IP of the management station. The remote access is allowed only from these IP addresses if management station feature is enabled.

aaa switch-access management-stations [ip_address | ip_address /mask]

no aaa switch-access management-stations ip_address

Syntax Definitions

ip_address

IP address and the mask of the management station.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- The command is configurable when `aaa switch-access management-stations admin-state` is enabled.
- A maximum of 64 management stations can be configured.
- Removing an IP address from the management station list will not remove the IP from the banned list.
- Whenever an IP address is removed from the management station, switch will stop responding to that IP. However, the existing sessions are not terminated automatically.

Example

`-> aaa switch-access management stations 100.15.9.8`
`-> aaa switch-access management stations 100.15.9.9 255.255.255.0`

Release History

Release 8.3.1; command introduced.
**Related Commands**

- `aaa switch-access management-stations admin-state`
  Enables or disables the IP management station feature in a switch.

- `show aaa switch-access management-stations`
  Displays the list of configured management stations.

Usage Guidelines

N/A

Examples

`-> show aaa common-criteria config`
Admin State: Enabled,
Operational State: Enabled

Release History

Release 8.3.1; command introduced.

Related Commands

`aaa common-criteria admin-state` Enables or disables common criteria mode on the switch.

MIB Objects

N/A
aaa certificate update-ca-certificate

Updates the CA-bundle with the custom CA server certificate provided by CA.

`aaa certificate update-ca-certificate ca_file`

**Syntax Definitions**

`ca_file` The custom CA server certificate (in PEM format) provided by the CA.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- The custom CA server certificate should be copied in PEM format to the `/flash/switch/cert.d` directory via SFTP.
- This command appends the existing CA bundle (`certs.pem`) and the custom CA server certificate provided as input.
- The update of custom CA server certificates needs to be done before corresponding server configurations are done on the switch. If the update is done post server configuration, then a switch reboot needs to be done for the changes to take effect.

**Examples**

```
-> aaa certificate update-ca-certificate ca.pem
```

**Release History**

Release 8.3.1; command introduced.
Related Commands

**aaa certificate update-crl**  Updates the CRL list with the custom CRL provided by CA.

MIB Objects

N/A
aaa certificate update-crl

Updates the CRL list with the custom CRL provided by CA.

```bash
aaa certificate update-crl crl_file
```

### Syntax Definitions

**crl_file**

The custom CRL file (in PEM format) provided by the CA.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- The custom CRL file should be copied in PEM format to the `/flash/switch/cert.d` directory via SFTP.
- This command appends the existing CRL file (`crl.pem`) and the custom CRL provided as input.
- The update of the custom CRL needs to be done before corresponding server configurations are done on the switch. If the update is done post server configuration, then a switch reboot needs to be done for the changes to take effect.

### Examples

```bash
-> aaa certificate update-crl crl.pem
```

### Release History

Release 8.3.1; command introduced.

### Related Commands

- **aaa certificate update-ca-certificate**
  
  Updates the CA-bundle with the custom CA server certificate provided by CA.

### MIB Objects

N/A
aaa certificate generate-rsa-key key-file

Generates the RSA 2048 bit key with the file name provided as input.

**Syntax Definitions**

`key_file` The name of the key file under which the RSA 2048 bit key is stored.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 6900</th>
<th>6900 6900</th>
</tr>

<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Generates RSA 2048 bit key in `/flash/switch/cert.d` directory with the file name as the input key file.

**Examples**

```
-> aaa certificate generate-rsa-key key-file myCliPrivate.key
```

**Release History**

Release 8.3.1; command introduced.

**Related Commands**

- `aaa certificate generate-self-signed` Generates the X.509 self-signed certificate for TLS client authentication.
- `aaa certificate view` Displays the contents of the X.509 certificate.
- `aaa certificate delete` Deletes the X.509 certificate.

**MIB Objects**

N/A
aaa certificate generate-self-signed

Generates the X.509 self-signed certificate for TLS client authentication.

```
aaa certificate generate-self-signed {cert_file} key {key_file} [days valid_period] {cn common_name} {on org_name} {ou org_unit} {l locality} {st state} {c country}
```

### Syntax Definitions

- **cert_file**
  - The name of the X.509 certificate file to be created.

- **key_file**
  - The name of the key file under which the RSA 2048 bit key is stored.

- **valid_period**
  - Validity period (in days) of the X.509 certificate.

- **common_name**
  - Common Name used in X.509 certificate.

- **org_name**
  - The Organization Name used in X.509 certificate.

- **org_unit**
  - The Organization Unit used in X.509 certificate.

- **locality**
  - The Locality used in X.509 certificate.

- **state**
  - The State used in X.509 certificate.

- **country**
  - The Country used in X.509 certificate.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- This command generates the file in `/flash/switch/cert.d` directory.

- Default values will be taken for all other optional parameters while generating the X.509 certificate.

- The X.509 certificate needs to be done before corresponding server configurations are done on the switch. If the certificate is created post server configuration, then a switch reboot needs to be done for the changes to take effect.

### Examples

```
-> aaa certificate generate-self-signed myCliCert.pem key clientkey.key days 3650 cn client.ale.com on ALE ou ESD l BAN st KAR c IN
```
**Release History**

Release 8.3.1; command introduced.

**Related Commands**

---

**Release History**

Release 8.3.1; command introduced.

---

**Related Commands**

- **aaa certificate generate-self-signed** Generates the X.509 self-signed certificate for TLS client authentication.
- **aaa certificate view** Displays the contents of the X.509 certificate.

---

**MIB Objects**

- N/A
aaa certificate generate-csr

Generates the CSR (Certificate Signing Request) to be sent to get a CA signed certificate for TLS client authentication.

```bash
aaa certificate generate-csr {csr_file} key {key_file} [dn domain_name] {cn common_name} {on org_name} {ou org_unit} {l locality} {st state} {c country}
```

**Syntax Definitions**

- `csr_file` The name of the CSR certificate file to be created.
- `key_file` The name of the key file under which the RSA 2048 bit key is stored.
- `domain_name` Domain name to be used in the CSR.
- `common_name` Common Name used in X.509 certificate.
- `org_name` The Organization Name used in X.509 certificate.
- `org_unit` The Organization Unit used in X.509 certificate.
- `locality` The Locality used in X.509 certificate.
- `state` The State used in X.509 certificate.
- `country` The Country used in X.509 certificate.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Generates `<csr_file>.pem` file in `/flash/switch` directory. The `<csr_file>.pem` file created should be sent to CA signing authority to get the CA certificate.
- Default values will be taken for all other optional parameters while generating the CSR.
- The CSR needs to be created, sent to CA authority and the corresponding CA certificate (obtained from CA authority) should be uploaded to the `/flash/switch` directory before corresponding server configurations are done on the switch. If the CA certificate is uploaded post server configuration, then a switch reboot needs to be done for the changes to take effect.

**Examples**

```bash
-> aaa certificate generate-csr myCliCert.pem key clientkey.key cn client.ale.com
```
AAA Commands

**aaa certificate generate-csr**

**Release History**

Release 8.3.1; command introduced.

**Related Commands**

- `show aaa common-criteria config`
  Displays the common criteria status on the switch.

**MIB Objects**

- **N/A**
ssl pki client validate-certificate admin-state

Enables or disables the server’s certification validation when the application on the switch acts as TLS client.

ssl pki client validate-certificate admin-state {enable | disable}

**Syntax Definitions**

**enable**
Enables the server’s certification validation for the client application on the switch.

**disable**
Disables the server’s certification validation for the client application on the switch.

**Defaults**
By default, the feature is disabled.

**Platforms Supported**
This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900 V72/C32 | 6900 X48C6/T48C6/ | 9900 |
|------|------|------|-------|------|-------|------|------|-------------| X48C8/C32/ |       |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes         | T48C8/     | Yes   |
|      |      |      |       |      |       |      |      |             | C32E/T24C2/ |       |
|      |      |      |       |      |       |      |      |             | X24C2      |       |

**Usage Guidelines**

- When the feature is enabled or disabled, the switch must be rebooted for the changes to be applied.
- When the feature is enabled, TLS client (LDAP, RADIUS, and SYSLOG) applications validate server certificate based on:
  - TLS mutual authentication using X.509 certificates.
  - The presented identifier must match the reference identifier as per RFC 6125 Section 6.
  - X.509 certificate validation using OCSP and CRL.

**Examples**

-> ssl pki client validate-certificate admin-state enable
-> ssl pki client validate-certificate admin-state disable

**Release History**

Release 8.6R1; command introduced.
Related Commands

show ssl pki config
   Displays the Public Key Infrastructure (PKI) configuration.

MIB Objects

systemSslPki
   systemSslPkiClientCertificateValidation
ssl pki client mutual-authentication admin-state

Enables or disables the mutual authentication for the TLS client applications on the switch.

ssl pki client mutual-authentication admin-state {enable | disable}

---

### Syntax Definitions

- **enable**: Enables the mutual authentication for the TLS client applications on the switch. When mutual-authentication is enabled, TLS client applications will need to load `myCliCert.pem`, `myCliPrivate.key` files in `/flash/switch/cert.d` and provide the certificate to server.

- **disable**: Disables the mutual authentication for the TLS client applications on the switch.

---

### Defaults

By default, the feature is disabled.

---

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

### Usage Guidelines

- When the feature is enabled or disabled, the switch must be rebooted for the changes to be applied.

- Enable this feature when the TLS client (LDAP, RADIUS, SYSLOG) applications needs to load the certificate `myCliCert.pem` and `myCliPrivate.key` file in `/flash/switch/cert.d` directory and provide the certificate file to server while establishing TLS connection.

- If the server certificate does not meet the validation criteria, the TLS client application connection is terminated.

---

### Examples

```
-> ssl pki client mutual-authentication admin-state enable
-> ssl pki client mutual-authentication admin-state disable
```

---

### Release History

Release 8.6R1; command introduced.
**Related Commands**

- `show ssl pki config`  
  Displays the Public Key Infrastructure (PKI) configuration.

- `ssl pki server mutual-authentication admin-state`  
  Enables or disables the mutual authentication for the TLS server applications on the switch.

- `aaa certificate update-ca-certificate`  
  Updates the CA-bundle with the custom CA server certificate provided by CA.

**MIB Objects**

- `systemSslPkiClientMutualAuthentication`
**ssl pki server mutual-authentication admin-state**

Enables or disables the mutual authentication for the TLS server applications on the switch.

`ssl pki server mutual-authentication admin-state {enable | disable}`

---

**Syntax Definitions**

- **enable**
  
  Enables the mutual authentication for the TLS server applications on the switch. When mutual-authentication is enabled, the TLS server (SNMP) application will require clients to provide their certificate to server while establishing TLS connection.

- **disable**
  
  Disables the mutual authentication for the TLS server applications on the switch.

---

**Defaults**

By default, the feature is disabled.

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- When the feature is enabled or disabled, the switch must be rebooted for the changes to be applied.
- Enable this feature when the TLS server (SNMP) application must require clients to provide their certificate to server while establishing TLS connection.
- When the feature is enabled, TLS server (SNMP) application validates client certificate based on:
  - TLS mutual authentication using X.509 certificates.
  - The presented identifier must match the reference identifier as per RFC 6125 Section 6.
  - X.509 certificate validation using OCSP and CRL.
- If the client certificate does not meet the validation criteria, the TLS server application connection is terminated.

---

**Examples**

- `-> ssl pki server mutual-authentication admin-state enable`
- `-> ssl pki server mutual-authentication admin-state disable`
**Release History**

Release 8.6R1; command introduced.

**Related Commands**

- `show ssl pki config` Displays the Public Key Infrastructure (PKI) configuration.
- `ssl pki client mutual-authentication admin-state` Enables or disables the mutual authentication for the TLS client applications on the switch.

**MIB Objects**

- `systemSslPki`
- `systemSslPkiServerMutualAuthentication`
**ssl pki tls version**

Configures the TLS version for both TLS client and server applications.

ssl pki tls version {1.0 | 1.1 | 1.2}

---

**Syntax Definitions**

1.0  
Sets the TLS version for client and server to 1.0.

1.1  
Sets the TLS version for client and server to 1.1.

1.2  
Sets the TLS version for client and server to 1.2.

**Defaults**

By default, the SSL PKI TLS version is 1.0.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- The switch must be rebooted for the changes to be applied.
- When the TLS version is configured, TLS client and server applications will deny all SSL and TLS versions which are lower than the configured version.
- The command is applicable only for LDAP, RADIUS, SYSLOG and SNMP applications.

**Examples**

- `ssl pki tls version 1.0`
- `ssl pki tls version 1.2`

**Release History**

Release 8.6R1; command introduced.

### ssl cipher

Selects the cipher security level for the applications using the OpenSSL.

```
ssl cipher {[level {all | high | medium | low}] | [custom {string | file string}]}
```

#### Syntax Definitions

- **all**
  - Includes all the cipher suites, including NULL-SHA.

- **high**
  - Includes only AES-256 with SHA-2 ciphers (Applicable only for TLSv1.2).

- **medium**
  - Includes all ciphers suites, except NULL-SHA, DES-CBC-SHA, and RC4-MD5.

- **low**
  - Includes all cipher suites, except NULL-SHA.

- **string**
  - Name of the cipher suite. It can be list of ciphers or a collective cipher file name. The custom cipher can have a maximum length of 255 characters in CLI and the cipher file can be of maximum 1024 bytes in size.

#### Defaults

By default, the SSL cipher security level is set to medium in default switch operation mode and high in common criteria mode.

#### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Support</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

#### Usage Guidelines

- To apply the new SSL cipher security level, switch must be rebooted.

- The command is applicable only for LDAP, Syslog, RADIUS, SNMP, and Captive Portal applications.

- Custom ciphers cannot be more than 255 characters. Hence, the cipher files can be used to configure ciphers more than 255 characters.

- The cipher file can be created by copying the required ciphers in the notepad and saving it as a cipher file with “.cipher” as the file extension.

- The ciphers for the custom cipher and cipher file must be from the supported list of ciphers. To view the supported ciphers, use the `show ssl ciphers all` command.

- The cipher file must be copied to the flash directory of the switch before using this command.
• In chassis based model, the cipher file needs to be copied in both the primary and secondary unit flash directory. In VC based models, the cipher file must be copied to all the flash directory of all the modules.

Examples

-> ssl cipher level all  
-> ssl cipher level low  
-> ssl cipher level medium  
-> ssl cipher level high  
-> ssl cipher custom AECDH-AES256-SHA  
-> ssl cipher custom file /flash/abc.cipher

  - systemSslCipherSuite
**kerberos inactivity-timer**

Configures global inactivity timer on the switch for Kerberos users.

`kerberos inactivity-timer num`

---

**Syntax Definitions**

`num` Time interval in minutes.

---

**Defaults**

By default, inactivity timer is set to 300 minutes.

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- The valid range of inactivity timer is 10–600 minutes.
- Whenever a Kerberos user becomes inactive, then the inactivity timer will be started for that user. If Kerberos user becomes active before inactivity timer expiry, then timer will be stopped. User entry will be removed from the Kerberos user database on timer expiry.
- On OS6465 and OS6900, Kerberos is supported only in bridge mode.
- On OS6860N, Kerberos is supported in bridge mode and access port on SPB.

---

**Examples**

`-> kerberos inactivity-timer 30`

---

**Release History**

Release 8.6R2; command introduced.
Related Commands

**kerberos server-timeout**
Configures global server reply time-out timer value on the switch for Kerberos users.

**show kerberos configuration**
Displays Kerberos global configuration.

MIB Objects

alaDaKerberosGlobalConfig

alaDaKerberosGlobalInactivityTimer
**kerberos ip-address**

Configures IP address of the Kerberos server (Key Distribution Centre - KDC) and UDP or TCP port number.

```
kerberos ip-address ip_address [port num]
no kerberos ip-address ip_address
```

**Syntax Definitions**

`ip_address`  
The IP address of the Kerberos server. (KDC)

`num`  
UDP or TCP port number of the Kerberos application running on the Kerberos server. UDP port range is 1–65535.

**Defaults**

Default value of the port is 88.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- At least one Kerberos server and one Kerberos enabled port must be configured on the switch for Kerberos snooping to function.
- A maximum of two Kerberos server IP addresses can be configured on a switch
- Server IP address cannot be configured as 0.0.0.0, and the octet value in the IP address cannot be greater than 255 (for example, 1.256.2.3).
- Use the `port` keyword to configure both UDP and TCP protocol port number.
- Use the `no` form of this command to delete the Kerberos server IP address. Only one server can be deleted at a time.
- The UDP/TCP port number is not required to remove the Kerberos server IP address configuration.
- If all the authentication servers are removed from the switch, then all the Kerberos users learned so far on all the ports are not removed from the database.
- On OS6465 and OS6900, Kerberos is supported only in bridge mode.
- On OS6860N, Kerberos is supported in bridge mode and access port on SPB.
**Examples**

-> kerberos ip-address 172.21.160.102 port 2001  
-> kerberos ip-address 172.21.160.103 port 2003  
-> no kerberos ip-address 172.21.160.102

**Release History**

Release 8.6R2; command introduced.

**Related Commands**

- **kerberos inactivity-timer**: Configures a global inactivity timer on the switch for Kerberos users.

- **kerberos server-timeout**: Configures a global server reply time-out timer value on the switch for Kerberos users.

- **show kerberos configuration**: Displays the Kerberos global configuration.

**MIB Objects**

- alaDaKerberosServerTable  
- alaKerberosIpAddress  
- alaDaKerberosUdpPort  
- alaDaKerberosRowStatus
**kerberos server-timeout**

Configures global server reply time-out timer value on the switch for Kerberos users.

```
kerberos server-timeout seconds
```

**Syntax Definitions**

- `seconds` Server reply time-out time interval in seconds in the range 1 second to 30 seconds.

**Defaults**

By default, reply-timeout is 2 seconds.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- All the users trying to get authenticated from a specific server will have the same value for reply-timeout timer.
- Whenever a Kerberos request packet is sent to the server, the server reply time-out starts. If the timer expires before receiving the reply from the server, the user authentication is marked as server-time-out and a trap is generated.
- On OS6465 and OS6900, Kerberos is supported only in bridge mode.
- On OS6860N, Kerberos is supported in bridge mode and access port on SPB.

**Examples**

```
-> kerberos server-timeout 20
```

**Release History**

Release 8.6R2; command introduced.

alaDaKerberosGlobalServerTimeoutTimer
**kerberos authentication-pass policy-list-name**

Configures a global classification QoS policy list on the switch for Kerberos users.

```
kerberos authentication-pass policy-list-name policy_list
no kerberos authentication-pass policy-list-name
```

### Syntax Definitions

- `policy_list`: Name of the QoS policy list.

### Defaults

By default, there is no Kerberos global QoS policy list configured.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- The QoS policy list must be created prior to this configuration.
- Per-user Kerberos policy list configuration is not supported.
- Use the `no` form of this command to remove the global classification QoS policy list from the switch.
- There is no validation done for QoS policy list in Kerberos. It is the user’s responsibility to associate the correct QoS policy list with Kerberos.
- If the QoS policy list is deleted from the system, then the corresponding configuration in Kerberos will be removed and no error message will be thrown.
- If a domain level policy list is configured in the switch and any user belonging to that domain gets authenticated from the Kerberos server, then the domain level policy list is applied to the user over the global policy list.
- If a user gets authenticated from the Kerberos server and the domain level policy list is not configured on the switch for the authenticated user, then the global policy list is applied to the user if the global policy list is configured on the switch.
- If a user gets authenticated from the Kerberos server and neither the domain level policy list (for that user domain) nor the global policy list is configured, then the user traffic is classified on the basis of already applied non-supplicant authentication classification.
- On OS6465 and OS6900, Kerberos is supported only in bridge mode.
• On OS6860N, Kerberos is supported in bridge mode and access port on SPB.

**Examples**

-> kerberos authentication-pass policy-list-name p2

The following example shows that the p2 is configured as the global classification QoS policy list on the switch for Kerberos users.

-> show kerberos configuration

Inactivity Timer :30 (mins),
Server Timeout :20 (secs),
**Global QoS Policy List** :p2,

Servers :
IP-Address UDP Port
------------------+----------------
1.1.1.1           88

Per Domain QoS policy List :
Domain-Name Policy-List-Name
---------------------------------+--------------------------+--
EXAMPLE.COM       p11

When the QoS policy list p2 is removed from the system, the corresponding configuration in Kerberos is shown as below.

-> no policy list p2
-> qos apply

-> show kerberos configuration

Inactivity Timer :30 (mins),
Server Timeout :20 (secs),

Servers :
IP-Address UDP Port
------------------+----------------
1.1.1.1           88

Per Domain QoS policy List :
Domain-Name Policy-List-Name Status
---------------------------------+--------------------------+----------
EXAMPLE.COM       p11 active

The following command removes the global classification QoS policy list from the switch:

-> no kerberos authentication-pass policy-list-name

**Release History**

Release 8.6R2; command introduced.
Related Commands

**kerberos ip-address**

Configures IP address of the Kerberos server (Key Distribution Centre - KDC) and UDP or TCP port number.

**kerberos authentication-pass domain**

Configures "per domain" classification policy for the Kerberos users.

**show kerberos configuration**

Displays Kerberos global configuration.

MIB Objects

<table>
<thead>
<tr>
<th>Object Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>alaDaKerberosGlobalConfig</td>
</tr>
<tr>
<td>alaDaKerberosGlobalPolicy</td>
</tr>
</tbody>
</table>
**kerberos authentication-pass domain**

Configures a per-domain classification policy for the Kerberos users.

```bash
kerberos authentication-pass domain domain_name policy-list-name policy_list
```

```bash
no kerberos authentication-pass domain domain_name
```

**Syntax Definitions**

- **domain_name**: Domain name on which the QoS policy is applied. Domain name length can be a maximum of 32 characters. Domain name is case sensitive.

- **policy_list**: Name of the QoS policy list already configured.

**Defaults**

By default, there is no Kerberos global QoS policy list configured.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6/</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove the per-domain classification policy for Kerberos users.
- Domain name is case sensitive.
- On OS6465 and OS6900, Kerberos is supported only in bridge mode.
- On OS6860N, Kerberos is supported in bridge mode and access port on SPB.

**Examples**

```bash
-> kerberos authentication-pass domain EXAMPLE.COM policy-list-name p11
```

The following example shows that the `p11` is configured as the policy list associated with the domain `EXAMPLE.COM`:

```bash
-> show kerberos configuration
Inactivity Timer :30 (mins),
Server Timeout   :20 (secs),

Servers:
IP-Address UDP Port
------------------------+----------
1.1.1.1              88
```

---

OmniSwitch AOS Release 8 CLI Reference Guide   April 2023   page 39-199
Per Domain QoS policy List :
Domain-Name                                      Policy-List-Name
---------------------------------------------------------------
EXAMPLE.COM                                        p11

When the QoS policy list **p11** is removed from the system, the corresponding configuration in Kerberos is shown as below.

-> no policy list p11
-> qos apply
-> show kerberos configuration
Inactivity Timer :30 (mins),
Server Timeout   :20 (secs),

Servers :
IP-Address        UDP Port
-----------------+----------------
1.1.1.1           88

Per Domain QoS policy List :
Domain-Name                                      Policy-List-Name
---------------------------------------------------------------
EXAMPLE.COM                                        p11

The following command removes the per-domain classification policy for Kerberos users:

-> no kerberos authentication-pass domain EXAMPLE.COM

**Release History**

  alaKerberosPolicyName
**show kerberos users**

Displays the learned Kerberos users information.

```
show kerberos users [port chassis/slot/port | linkagg agg_id | mac-address mac_address | count]
```

### Syntax Definitions

- **chassis**: The Chassis Identifier.
- **slot/port**: The slot number for the module and the physical port number on that module (for example, 3/1 specifies port 1 on slot 3).
- **agg_id**: Enter a link aggregate ID number.
- **mac_address**: MAC address of the Kerberos user.
- **count**: Displays the number of Kerberos users.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- If a **chassis/slot/port** is specified, the Kerberos users learned on that port are displayed.
- If **agg_id** is specified, the Kerberos users learned on that link aggregate are displayed.
- If a MAC address is specified, then the information related to that Kerberos user is displayed.
- If none of the parameters are specified (chassis/slot/port, MAC address), then the information related to all the Kerberos users learned on the switch is displayed.
- On OS6465 and OS6900, Kerberos is supported only in bridge mode.
- On OS6860N, Kerberos is supported in bridge mode and access port on SPB.

### Examples

```
-> show kerberos users
<table>

aaa jitc admin-state

Enables or disables Joint Interoperability Test Command (JITC) mode on the switch.

```
aaa jitc admin-state {enable | disable}
```

**Syntax Definitions**

```
enable | disable
```

Enables or disables the JITC (Joint Interoperability Test Command) mode.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>disable</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

**Examples**

```
-> show aaa jitc config
Admin State: Enabled,
Operational State: Enabled
```

**output definitions**

- **Admin State**: Indicates configuration status of JITC mode (Enabled or Disabled).
- **Operational State**: Indicates operational status of JITC mode (Enabled or Disabled).

**Release History**

Release 8.4.1; command introduced.
Related Commands

**aaa jitc admin-state**
Enables or disables JITC mode on the switch.

MIB Objects

N/A
Access Guardian refers to a set of OmniSwitch security functions that work together to provide a dynamic, proactive network security solution. This chapter provides information about the commands that are used to configure the following Access Guardian features through the Command Line Interface (CLI):

- **Universal Network Profile (UNP)**—Access Guardian is configured and applied through the framework of the UNP feature. UNP is enabled on switch ports to activate Access Guardian functionality that is used to authenticate and classify users into UNP profiles. Each profile is mapped to a VLAN ID or Service Access Point (SAP) to which the user is dynamically assigned. Specific UNP port configurations help to simplify and easily replicate the same configuration across multiple ports.

- **Bring Your Own Device (BYOD) - OmniSwitch / UPAM or ClearPass Integration**: The OmniSwitch leverages Access Guardian functionality along with the OmniVista Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) to provide an overall BYOD solution.
  - Configurable UNP port and profile attributes are used to redirect traffic from the OmniSwitch to the UPAM or CPPM server.
  - Configurable GRE tunnels allow the OmniSwitch to intercept and tunnel Multicast Domain Name System (mDNS) and Simple Service Discovery Protocol (SSDP) packets to or from a WLAN controller in a BYOD network.

- **Captive Portal**—Internal and external Captive Portal Web-based authentication. Internal Captive Portal authentication is provided through an internal Web server on the OmniSwitch that presents default or customized Web pages to the user. A post-authentication and/or post-classification process to validate user credentials and dynamically assign a new role (policy list) to enforce user access to the network. External, guest Captive Portal authentication is provided through the OmniSwitch Access Guardian interaction with the OmniVista Unified Policy Access Manager or the ClearPass Policy Manager.

- **Quarantine Manager and Remediation (QMR)**—QMR is a switch-based application that restricts the network access of known quarantined users and provides a remediation path to allow quarantined users to regain their network access.

- **IoT Device Profiling IoT**—Device Profiling allows the network administrators to support and manage smart phones, Tablets and other devices connecting to the network. The IoT Device Profiling uses DHCP FingerPrinting and MAC OUI (MAC Vendors) to identify IoT devices.

For commands used to configure device authentication, authorization, and accounting parameters that are used to support Access Guardian functionality, see “Chapter 39, “AAA Commands.”

For commands used to configure Learned Port Security (LPS), which is used by Access Guardian to help ensure that only certain devices are allowed to connect to the switch, see “Chapter 47, “Learned Port Security Commands.”
MIB information for the UNP commands is as follows:

- **Filename**: ALCATEL-IND1-DA-MIB.mib
  - **Module**: alcatelIND1DaMIB

- **Filename**: ALCATEL-IND1-UDP-RELAY-MIB.mib
  - **Module**: alcatelIND1UDP RelayMIB

unp dynamic-vlan-configuration

Configures the UNP status for dynamic VLAN configuration. When this functionality is enabled and a VLAN mapping is configured with a VLAN ID that does not exist, the switch will dynamically create the necessary VLAN ID.

unp dynamic-vlan-configuration

no unp dynamic-vlan-configuration

Syntax Definitions

N/A

Defaults

By default, dynamic VLAN configuration is disabled.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Note. Dynamic VLANs are not saved in the VLAN section of the boot.cfg file. However, the unp commands to enable dynamic VLAN configuration and create a UNP are saved in the UNP section of the boot.cfg file. As a result, the VLAN is created again on the next switch bootup.

- Use the no form of this command to disable dynamic VLAN configuration.
- When dynamic VLAN configuration is disabled, configuring a VLAN mapping with a VLAN ID that does not exist in the switch configuration is not allowed.
- The VLAN status and other port (non-UNP port) assignments for a dynamic UNP VLAN are configurable using standard VLAN commands. In addition, the STP status is configurable and enabled by default when the dynamic VLAN is created.
- A dynamic VLAN cannot be deleted using standard VLAN commands (no vlan vlan_id).
- UNP dynamic VLANs are identified as a separate type of VLAN. The show vlan command will display this type with the default name of “UNP-DYN-VLAN” and the designated type as “UNP Dynamic Vlan”.

Examples

-> unp dynamic-vlan-configuration
-> no unp dynamic-vlan-configuration

**Release History**

Release 7.2.1; command was introduced.

**Related Commands**

- **unp profile**  
  Configures a UNP in the switch configuration.

- **show unp global configuration**  
  Displays the dynamic VLAN configuration status for the switch.

**MIB Objects**

alaDaUNPGlobalConfiguration
  alaDaUNPDynamicVlanConfigFlag
**unp dynamic-profile-configuration**

Configures the UNP status for dynamic profile configuration. When this functionality is enabled, a UNP profile is dynamically created based on specific traffic conditions.

```
unp dynamic-profile-configuration
no unp dynamic-profile-configuration
```

**Syntax Definitions**

N/A

**Defaults**

By default, dynamic profile configuration is disabled.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to disable dynamic profile configuration.
- When dynamic profile configuration is enabled, a UNP profile is dynamically created when the trust VLAN tag option is enabled on the UNP port or link aggregate and one of the following conditions occurs:
  - A tagged packet received on the UNP port contains a VLAN tag that matches an existing MVRP VLAN in the switch configuration that is not assigned to a profile.
  - There is no matching VLAN in the switch configuration.
- Dynamically created profiles are saved in the `boot.cfg` file for the switch.
- By default, dynamically created profiles are automatically named `dynamic_profile_vlan_id`, where the VLAN ID is the ID of the VLAN contained in the packet tag.
- After the dynamic profile is created, changing the profile name, the associated VLAN ID, or the QoS policy list is allowed. To avoid any confusion, change the profile name if the VLAN ID associated with the profile has changed.
- If the dynamic profile configuration option is enabled along with the dynamic VLAN configuration option and a dynamically created profile refers to a VLAN that is an MVRP VLAN, then the MVRP VLAN is automatically converted to a dynamic UNP VLAN (UNP-DYN-VLAN).
Examples

-> unp dynamic-profile-configuration
-> no unp dynamic-profile-configuration

Release History

Release 7.2.1.R02; command was introduced.

Related Commands

- **unp profile**
  Configures a UNP in the switch configuration.

- **unp dynamic-vlan-configuration**
  Configures the status of dynamic VLAN configuration. When enabled, UNP will create a VLAN at the time a VLAN mapping for a profile is created that specifies a VLAN ID that does not exist in the switch configuration.

- **show unp global configuration**
  Displays the dynamic profile configuration status for the switch.

MIB Objects

- **alaDaUNPGlobalConfiguration**
- **alaDaUNPDynamicProfileConfigFlag**
**unp delay-learning**

Configures the UNP delay learning time interval. This specifies the amount of time, in seconds, that UNP will delay learning packets received on UNP ports.

`unp delay-learning seconds`

---

**Syntax Definitions**

`seconds` The amount of time to wait before UNP learning starts. The valid range is 0–600 seconds.

---

**Defaults**

By default, the delay learning timer is disabled (timer value is set to 0).

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- To disable the delay learning timer, set the timer value to zero (the default).
- The configured time interval is triggered when the switch boots up. During this time, any packets received on all UNP ports are dropped until the timer expires.
- Configuring a delay learning interval gives the switch time to bring up IP interfaces and for route convergence to complete before any attempt to reach an authentication server is made.

---

**Examples**

```
-> unp delay-learning 250
-> unp delay-learning 600
-> unp delay-learning 0
```

---

**Release History**

Release 8.5R2; command was introduced.
Related Commands

**unp auth-server-down**  Configures a UNP to which a device is classified if MAC or 802.1X authentication fails because the RADIUS server is not reachable.

**show unp global configuration**  Displays the UNP delay learning timer value for the switch.

MIB Objects

alaDaUNPGlobalConfiguration
alaDaUNPDelayLearning
unp auth-server-down

Configures a UNP profile to which a device is classified if authentication fails because the RADIUS server is unreachable.

`unp auth-server-down [voice] {profile1 profile_name [profile2 profile_name] [profile3 profile_name]}`

`no unp auth-server-down [voice] [profile1] [profile2] [profile3]`

---

**Syntax Definitions**

- **profile_name**
  The name of an existing profile to which the device is assigned when the authentication server is unreachable.

- **voice**
  Classifies the IP phone traffic from the data traffic when the authentication server is down.

---

**Defaults**

N/A

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- Use the `no` form of this command to remove an authentication server down UNP profile.

- When a device is classified into the specified profile, a configurable authentication down timer is started for that device. When the timer runs out, the authentication process is performed again. If authentication fails again, the device is classified back into the authentication server down profile. The switch will repeat this process until the device authentication is completed.

- Configuring an authentication server down UNP is highly recommended when MAC or 802.1X authentication is enabled on any UNP port or link aggregate. This is because after a switch reload, the traffic from devices connected to UNP ports and link aggregates reaches the switch and triggers the authentication process before route convergence has completed and the server can be reached.
  - If an authentication server down UNP is configured, devices are temporarily learned in that profile and authentication is automatically attempted again after the timeout period expires. This allows time for the server to become reachable from the switch after a reload.
  - If an authentication server down UNP is not configured, devices are learned as filtering and will remain in that state. There is no further attempt to authenticate these devices again.

- If the authentication server down UNP is removed, the authentication server down timer is also removed.
Up to three different profile names are configurable as authentication server down UNP profiles. The profile applied to the traffic is based on the order of precedence and mapping of each profile. For example:

- Profiles mapped to a VLAN are applied only to device traffic received on UNP bridge ports.
- Profiles mapped to a service (SPB, VXLAN, or static) are only applied to device traffic received on UNP access ports.
- When multiple profiles are configured, each profile is checked in the order of precedence (profile1 first, profile2 second, and profile3 third) to determine which profile is applied to the device traffic.

Configuring both a VLAN profile and a service profile ensures that an authentication server down UNP is available for device traffic received on both types of UNP ports (bridge and access).

**Examples**

- `-> unp auth-server-down profile1 unp1-vlan`
- `-> no unp auth-server-down profile1`
- `-> unp auth-server-down profile1 unp1-vlan profile2 unp2-vxlan`
- `-> no unp auth-server-down profile1 profile2`

**Release History**

Release 7.2.1; command was introduced.
Release 7.3.4; command syntax changed; `vxlan-profile` parameter added.
Release 8.3.1; `vlan-profile` and `vxlan-profile` parameters replaced with `profile1`, `profile2`, and `profile3` parameters.
Release 8.5R2; `voice` parameter added.

**Related Commands**

- `unp auth-server-down-timeout` Configures the value for the authentication server down timer.
- `show unp global configuration` Displays the profiles designated as the authentication server down UNP for the switch.

**MIB Objects**

alaDaUNPGlobalConfiguration
alaDaUNPAuthServerDownUnp
unp auth-server-down port-bounce

Configures the port-bounce feature for all authentication server down users globally on all the UNP ports. The port-bounce command forces a re-authentication or a reset of the port when the device gets moved to the new profile.

```
unp auth-server-down port-bounce
no unp auth-server-down port-bounce
```

Syntax Definitions
N/A

Defaults
N/A

Platforms Supported
This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines
- Use the no form of this command to disable the port-bounce feature for Auth-server-down users.
- The port bounce action only applies to a MAC authenticated non-suppliant (non-802.1x device). If the device is a suppliant (802.1x device), then an EAP-Fail frame is sent instead. In both cases, re-authentication is triggered for both types of devices.

Examples
```
-> unp auth-server-down port-bounce
-> no unp auth-server-down port-bounce
```

Release History
Release 8.5R2; command was introduced.
Related Commands

**show unp global configuration** Displays the profiles designated as the authentication server down UNP for the switch.

MIB Objects

alaDaUNPGlobalConfiguration
  alaDaUNPAuthServerDownPortBounce
**unp auth-server-down-timeout**

Configures the authentication server down timer value. This timer value is applied to devices that are learned in the authentication server down UNP.

`unp auth-server-down-timeout seconds`

`no unp auth-server-down-timeout`

**Syntax Definitions**

`seconds` The number of seconds the authentication server down timer is active. The valid range is 10–43200 seconds.

**Defaults**

By default, the timeout value is set to 60 seconds.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to set the timer value back to the default value (60 seconds).
- When this timer expires, devices learned in the authentication server down UNP are cleared from that UNP. The authentication and classification process is attempted again.
- When the authentication server down UNP is removed, the authentication server down timer is also cleared.

**Examples**

```
-> unp auth-server-down-timeout 500
-> unp auth-server-down-timeout 120
-> no unp auth-server-down-timeout
```

**Release History**

Release 7.2.1; command was introduced.
Release 7.3.4; command syntax changed; `vxlan-profile` parameter added.
Release 8.3.1; `vlan-profile` and `vxlan-profile` parameters deprecated.
Release 8.7R3; timeout value range increased to 43200 seconds.
Related Commands

**unp auth-server-down**  
Configures a UNP to which a device is classified if MAC or 802.1X authentication fails because the RADIUS server is not reachable.

**show unp global configuration**  
Displays the authentication server down timeout value for the switch.

MIB Objects

alaDaUNPGlobalConfiguration
  alaDaUNPAuthServerDownTimeout
**unp policy validity-period**

Configures a UNP validity period policy that specifies the days and times during which a device can access the network. This type of policy is assigned to a UNP profile and applied to devices classified into the profile. A device must match all of the policy criteria.

```
unp policy validity-period policy_name [days days] [months months] [hours hh:mm to hh:mm] [interval mm:dd:yy hh:mm to mm:dd:yy hh:mm] [timezone zones]
```

```
no unp policy validity-period policy_name [days days | months months | hours | interval | timezone]
```

---

**Syntax Definitions**

- **policy_name**
  The name of the validity period policy (up to 31 alphanumeric characters).

- **days**
  The day(s) of the week this validity period is active. Enter the actual day of the week (e.g., *monday*, *tuesday*, *wednesday*, etc.).

- **months**
  The month(s) in which the validity period is active. Enter the actual month (e.g., *january*, *february*, *march*, etc.).

- **hh:mm**
  The time of day, specified in hours and minutes, the validity period starts and the time of day the validity period ends (e.g., 10:30 to 11:30).

- **mm:dd:yy hh:mm**
  An interval of time during which the validity period is active. Specify a start and end to the interval period by entering a beginning date and time followed by an end date and time (e.g., 11:01:17 12:01 to 11:02:17 12:01).

- **zones**
  The timezone in which the validity period is active (for example, *pst*, *est*, *gmt*, etc.)
Defaults

<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the `no` form of the command to remove a UNP period policy from the configuration, or to remove parameters from a particular validity period policy.

- Any combination of the `days`, `months`, `hours`, `interval`, and `timezone` parameters is allowed. The validity period is only in effect when all specified parameters are true.

- Use the `unp profile period-policy` command to associate a period policy with a UNP profile.

Examples

-> unp policy validity-period Office-Time
-> no unp policy validity-period Office-Time

-> unp policy validity-period Office-Time days monday
-> unp policy validity-period Office-Time days monday time-zone IST
-> no unp policy validity-period Office-Time time-zone
-> no unp policy validity-period Office-Time days monday

-> unp policy validity-period Office-Time days all
-> unp policy validity-period Office-Time days all time-zone PST
-> no unp policy validity-period Office-Time days saturday sunday

-> unp policy validity-period Office-Time hours 9:00 to 17:00
-> unp policy validity-period Office-Time hours 9:00 to 17:00 time-zone IST
-> no unp policy validity-period Office-Time hours

-> unp policy validity-period Holiday months december january
-> no unp policy validity-period Holiday months january

-> unp policy validity-period Holiday months december time-zone IST
-> no unp policy validity-period Holiday time-zone
-> no unp policy validity-period Holiday months december

-> unp policy validity-period Seminar interval 02/01/13 10:30 to 02/05/13 16:00
-> no unp policy validity-period Seminar interval

-> unp policy validity-period Seminar interval 02/01/13 10:30 to 02/05/13 16:00
time-zone PST
-> no unp policy validity-period Seminar time-zone
-> no unp policy validity-period Seminar interval

**Release History**

Release 8.1.1; command introduced.

**Related Commands**

- **unp profile period-policy** Assigns a UNP period policy to a profile.
- **show unp policy validity-period** Displays information about the UNP period policy configuration.

unp policy validity-location

Configures a UNP validity location policy that defines a specific location from which a device can access the network. This type of policy is assigned to a UNP profile and applied to devices classified into the profile. A device must match all of the policy criteria defined.

```
unp policy validity-location policy_name [port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2] [system-name system_name] [system-location system_location]]
```

```
no unp policy validity-location policy_name [port | linkagg | system-name | system-location]
```

**Syntax Definitions**

- `policy_name` The name of the validity location policy (up to 31 alphanumeric characters).
- `chassis` The chassis identifier.
- `slot/port[-port2]` The slot and port number (3/1) of a UNP port. Use a hyphen to specify a range of ports (3/1-8).
- `agg_id[-agg_id2]` The link aggregate ID number of a UNP link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).
- `system_name` The configured system name for the switch from which the device can access the network.
- `system_location` The configured system location for the switch from which the device can access the network.

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>

<td>Yes</td>
</tr>
</tbody>
</table>
Usage Guidelines

- Use the `no` form of the command to remove a UNP location policy from the configuration, or to remove parameters from a particular location policy.

- Any combination of the `port`, `linkagg`, `system-name`, and `system-location` parameters is allowed. The location policy is only in effect when all specified parameters are true.

- Use the `unp profile location-policy` command to associate a location policy with a UNP profile.

Examples

```bash
-> unp policy validity-location ALU-NA
-> no unp policy validity-location ALU-NA

-> unp policy validity-location ALU-NA port 1/1/10
-> unp policy validity-location ALU-NA port 1/1/1-5
-> no unp policy validity-location ALU-NA port

-> unp policy validity-location ALU-NA linkagg 10
-> unp policy validity-location ALU-NA linkagg 1-5
-> no unp policy validity-location ALU-NA linkagg

-> unp policy validity-location ALU-NA system-name OS6860
-> no unp policy validity-location ALU-NA system-name OS6860

-> unp policy validity-location ALU-NA system-location US-West
-> no unp policy validity-location ALU-NA system-location
```

Release History

Release 8.1.1; command introduced.

Related Commands

- `unp profile location-policy`: Assigns a UNP location policy to a profile.
- `show unp policy validity-location`: Displays information about the UNP location policy configuration.

MIB Objects

```bash
alaDaUNPLocationPolicyTable
   alaDaUNPLocationPolicyName
   alaDaUNPLocationPolicyPort
   alaDaUNPLocationPolicyPortHigh
   alaDaUNPLocationPolicyPortStatus
   alaDaUNPLocationPolicySystemName
   alaDaUNPLocationPolicySystemLocation
```
**unp domain description**

Configures a customer domain ID to which UNP ports and classification rules are assigned.

```
unp domain domain_id [description domain_description]
no unp domain domain_id description domain_description
```

**Syntax Definitions**

- `domain_id` A numerical customer domain ID.
- `domain_description` An alphanumeric string (1–128 characters).

**Defaults**

By default, customer domain ID zero (0) is assigned to all UNP ports.

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>domain_description</td>
<td>Domain ID</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove the customer domain ID from the switch configuration. When a domain ID is removed, the following actions are triggered:
  - All UNP ports assigned to that domain are moved to the default domain ID 0.
  - Any classification rules assigned to that domain are removed.
- Customer domains are used to group physical UNP ports or link aggregates into one logical domain.
- Once a port is assigned to a specific customer domain (see the `unp domain` command page), classification rules associated with the same customer domain ID are applied only to UNP ports associated with the same domain ID.

**Examples**

```
-> unp domain 1
-> unp domain 2 description CustomerA
```
Release History

Release 8.3.1; command was introduced.

Related Commands

- **unp domain** Assigns a UNP port or link aggregate to the specified customer domain (UNP group) ID.
- **show unp domain** Displays the customer domain ID configuration for the switch.

MIB Objects

- alaDaUnpCustomerDomainTable
  - alaDaUnpCustomerDomainId
  - alaDaUnpCustomerDomainDesc
**unp redirect pause-timer**

Configures the global pause timer value for the switch. Use this command to configure the amount of time the switch filters traffic from a non-suppliant (non-802.1X device) on a UNP port. This is done to allow enough time for the switch to clear the authentication state of the non-suppliant, at which time the device is re-authenticated.

```
unp redirect pause-timer seconds
no redirect pause-timer
```

**Syntax Definitions**

`seconds`  
The pause timer value. The valid range is 60–65535

**Defaults**

By default, the pause timer is set to zero.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to reset the pause time back to the default (timer no set).
- The pause timer is triggered when a Change of Authorization (COA) request is received that requires a VLAN change for a non-suppliant (non-802.1X device) and the port bounce action is not triggered for the device.
- During the pause time period, it is expected that the DHCP lease of the client IP in the old VLAN will expire and the client device will re-initiate DHCP resulting in new authentication and a UNP VLAN assignment.
- This command is used when configuring the switch to interact with the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) as part of the OmniSwitch Bring Your Own Devices (BYOD) solution.

**Examples**

```
-> unp redirect pause-timer 180
-> no unp redirect pause-timer
```
**Release History**

Release 8.1.1; command was introduced.

**Related Commands**

- `unp redirect port-bounce` CONFIGURES the port bounce action for a port or globally for the switch.
- `unp redirect proxy-server-port` CONFIGURES the HTTP proxy port number to use for redirection.
- `unp redirect allowed-name` CONFIGURES a list of additional IP addresses to which a host can access.
- `unp redirect server` CONFIGURES an IP network address to allow HTTP traffic redirection.
- `show unp global configuration` DISPLAYS the global UNP parameter settings for the switch.

**MIB Objects**

- `alaDaUNPGlobalConfiguration`
- `alaDaUNPRedirectPauseTimer`
unp redirect proxy-server-port

Configures the HTTP proxy port number to use for redirection to the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) server.

unp redirect proxy-server-port proxy_port

no unp redirect proxy-server-port

Syntax Definitions

proxy_port The HTTP proxy port number. The valid range is 1024–49151.

Defaults

By default, the redirect proxy port number is set to 8080 (traps HTTP 80, 8080, and 443).

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the no form of this command to set the proxy port number back to the default (8080).
- Configuring the switch to interact with the UPAM or CPPM is done as part of the OmniSwitch implementation of the Bring Your Own Devices (BYOD) solution.

Examples

-> unp redirect proxy-server-port 8887
-> no unp redirect proxy-server-port

Release History

Release 8.1.1; command was introduced.

</tr>
</tbody>
</table>

### MIB Objects

- `alaDaUNPGlobalConfiguration`
- `alaDaUNPRedirectServerIP`
**unp redirect server**

Configures an IP network address or a Fully Qualified Domain Name (FQDN) to allow redirection of HTTP traffic to the Unified Policy Access Manager (UPAM) server or the ClearPass Policy Manager (CPPM) server. Specify the address or domain name that is associated with the dynamic URL returned from the UPAM or CPPM server.

```
unp redirect server {ip_address | domain_name}

no unp redirect server
```

**Syntax Definitions**

- `ip_address`: The IPv4 network address (e.g., 171.15.0.0) to which HTTP traffic is redirected.
- `domain_name`: An FQDN (e.g., upam.com) to which HTTP traffic is redirected.

**Defaults**

By default, no redirect server IP address or FQDN is specified.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove the redirect server IP or FQDN from the switch configuration.
- If the redirect server IP address or FQDN does not match the UPAM or CPPM server configuration, then redirection to the URL will not work. This provides additional security.
- Configuring the switch to interact with UPAM or CPPM is done as part of the OmniSwitch implementation of the Bring Your Own Devices (BYOD) solution.

**Examples**

```
-> unp redirect server 10.0.0.20
-> no unp redirect server
-> unp redirect server upam.com
-> no unp redirect server
```
**Release History**

Release 8.1.1; command was introduced.
Release 8.5R1; `domain_name` parameter added.

**Related Commands**

- `unp redirect port-bounce` Configures the port bounce action for a port or globally for the switch.
- `unp redirect pause-timer` Configures the global pause timer value for the switch.
- `unp redirect proxy-server-port` Configures the HTTP proxy port number to use for redirection.
- `unp redirect allowed-name` Configures a list of additional IP addresses to which a host can access.
- `show unp global configuration` Displays the global UNP configuration for the switch.

**MIB Objects**

- `alaDaUNPGlobalConfiguration`
- `alaDaUNPRedirectServerIPType`
- `alaDaUNPRedirectServerIP`
**unp redirect allowed-name**

Configures an additional IP subnet to which a host can access. This allows traffic to reach an additional subnet other than that of the Unified Policy Access Manager (UPAM) server or the ClearPass Policy Manager (CPPM) server.

```
unp redirect allowed-name name ip-address ip_address ip-mask ip_mask
no unp redirect allowed-name name
```

**Syntax Definitions**

- **name** Specify a name to assign to the allowed IP network address.
- **ip_address** An IPv4 network address (e.g., 10.0.0.0, 171.15.0.0, 196.190.254.0).
- **ip_mask** The IP subnet mask for the allowed IP network address.

**Defaults**

By default, no allowed IP addresses are configured.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove an IP address from the allowed list.
- Explicitly configure and append the allowed IP list to the built-in "restrictedPolicylist" policy list.
- Only one IP subnet can be added.

**Examples**

```
-> unp redirect allowed-name server2 ip-address 10.0.0.20 ip-mask 255.0.0.0
-> no unp redirect allowed-name server2
```

**Release History**

Release 8.1.1; command was introduced.
**Related Commands**

- **unp redirect proxy-server-port**: Configures the HTTP proxy port number to use for redirection.
- **unp redirect server**: Configures an IP network address to allow HTTP traffic redirection.
- **show unp global configuration**: Displays the global UNP configuration for the switch.

**MIB Objects**

- `alaDaUNPRedirectAllowedServerTable`
- `alaDaUNPRedirectAllowedServerName`
- `alaDaUNPRedirectAllowedServerIP`
- `alaDaUNPRedirectAllowedMaskIP`
**unp force-l3-learning**

Configures the status of UNP Layer 3 learning on the specified UNP port or globally on all UNP ports. When this functionality is enabled and IP-based classification rules are configured on the switch, only Layer 3 packets are used to learn devices connected to UNP ports. Layer 2 packets are not used for learning devices.

```
unp [port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]] force-l3-learning [port-bounce]
```

```
no unp [port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]] force-l3-learning [port-bounce]
```

**Syntax Definitions**

- `chassis/slot/port[-port2]` The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).
- `agg_id[-agg_id2]` The link aggregate ID number for a specific UNP link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).
- `port-bounce` Resets the context in which the user device is learned after the device is re-classified with a new IP address. This option is not supported on UNP link aggregates.

**Defaults**

By default, UNP Layer 3 learning is disabled and the port bounce action is enabled.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- To disable Layer 3 learning for a specific port or link aggregate, use the `no` form of this command with the `port` or `linkagg` parameter. To globally disable Layer 3 learning, use the `no` form of this command without the `port` or `linkagg` parameter.

- When UNP Layer 3 learning is enabled and there is at least one IP-based classification rule configured, the first packet of the following types of packets is used to learn the device:
  - An IP packet with a non-zero source IP address.
  - A valid ARP/GARP request/reply.
  - DHCP packets, even if the source IP address is 0.0.0.0.

  However, the first packet of the following types of packets is *dropped* and not used to learn the device:
  - Layer 2 frames.
  - Invalid ARP/GARP request/reply (one with sender IP address 0.0.0.0 or 169.254.0.0/16).
- IP packet with a source IP address of 0.0.0.0, except for DHCP packets where the source IP address is 0.0.0.0.

- When Layer 3 learning is enabled and a device is learned and assigned to a UNP profile, any subsequent change to the IP address for that device (for example, the device is assigned a leased IP address) will trigger UNP to re-classify the device based on the new IP address.

- When Layer 3 learning is enforced, the following users learned on a UNP port or link aggregate would not undergo IP reclassification:
  - 802.1x (supplicant) and MAC authenticated (non-supplicant).
  - Users learned through a non-IP-based classification rule that has a higher precedence over IP-based classification rules (such as any UNP extended classification rule, binding rule, MAC address rule, or MAC address range rule).

- When Layer 3 learning is enforced, the following users learned on a UNP port or link aggregate might undergo IP reclassification:
  - Users learned through a non-IP-based classification rule that has a lower precedence than IP-based classification rules (such as a VLAN rule).
  - IP-based classification rule.

- If the port bounce action is enabled for Layer 3 learning, IP reclassification for a user might result in obtaining a new UNP profile based on an IP-based classification rule, and the new UNP profile may assign a VLAN that is different from the initial UNP profile VLAN. If this occurs, the port would be toggled causing the user context to get flushed, and the subsequent packet from the user would then be used to relearn the user. It is assumed that user in this case would subsequently send either a valid ARP packet or an IP packet with a valid source IP address as the first packet, which would be used for re-learning the user directly into the final UNP profile.

- Note that the IP address update/change for an already learned UNP user can happen only when a valid ARP packet is sent from the user after the user is initially learned. As a result, Layer 3 enforcement relies on an ARP packet from the user.

- Whenever an additional port is configured as a UNP port, the Layer 3 learning status is derived from the global setting for the switch.

- When Layer 3 learning is changed at the global level, all port-level configurations are also changed unless a custom port template that configures this function is assigned to the port. For example, when Layer 3 learning is globally disabled, it is automatically disabled on any port that has Layer 3 learning enabled. However, if a port is assigned to a custom port template that enables this function, then the Layer 3 learning status for that port is not changed.

- The port-level setting of the Layer 3 learning function overrides the global setting for the switch. For example, if Layer 3 learning is globally disabled but enabled on port 1/1/20, then Layer 3 learning is active only on port 1/1/20.

Examples

- `unp force-l3-learning`
- `unp force-l3-learning port-bounce`
- `no unp force-l3-learning port-bounce`
- `no unp force-l3-learning`

- `unp port 1/1/20 force-l3-learning`
- `unp port 1/1/20 force-l3-learning port-bounce`
- `no unp port 1/1/20 force-l3-learning port-bounce`
- `no unp port 1/1/20 force-l3-learning`
**Release History**

Release 8.3.1; command was introduced.
Release 8.3.1.R02; `port`, `linkagg`, and `port-bounce` parameters added.

**Related Commands**

- `show unp global configuration` Displays the status of UNP Layer 3 learning for the switch.
- `show unp port config` Displays the status of port-level UNP Layer 3 learning.

**MIB Objects**

alaDaUNPGlobalConfiguration
- alaDaUNPForceL3Learning
- alaDaUNPForceL3LearningPortBounce
alaDaUNPPortTable
- alaDaUNPPortForceL3Learning
- alaDaUNPPortForceL3LearningPortBounce
unp 802.1x-pass-through

Configures the global status of 802.1x pass through for the switch. When this functionality is enabled, 802.1x packets from supplicants attempting to authenticate are not processed on the local switch. Instead, the packets are passed along to another switch for authentication.

unp 802.1x-pass-through

no unp 802.1x-pass-through

Syntax Definitions

N/A

Defaults

By default, 802.1x pass through is disabled for the switch.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the no form of this command to disable 802.1x pass through for the switch.
- Enabling 802.1x pass through on a switch that has an existing UNP or LPS configuration is not recommended. This functionality is intended for a local or intermediate switch when the supplicant device requires authentication through an upstream switch.
- If 802.1x pass through is enabled on a switch that has an existing UNP or LPS configuration, consider the following:
  - 802.1x authentication, 802.1x authentication bypass, and MAC authentication allow EAP functionality is not supported on UNP ports.
  - The initial frame for unknown 802.1x traffic is learned on the switch. If the frame is learned in the forwarding mode, subsequent frames with the same source MAC address are passed through to the next switch. If the frame is learned in the filtering mode, subsequent frames with the same source MAC address are dropped and not passed through.

Examples

- -> unp 802.1x-pass-through
- -> no unp 802.1x-pass-through
Release History

Release 8.4.1.R02; command was introduced.

Related Commands

show unp global configuration  Displays the status of 802.1x pass through for the switch.

MIB Objects

alaDaUNPGlobalConfiguration
alaDaUNP8021XPassThrough
unp ipv6-drop

Configures whether IPv6 packets received on UNP ports are learned or dropped. When this functionality is enabled, IPv6 packets are dropped by UNP on the local switch.

unp ipv6-drop
no unp ipv6-drop

Syntax Definitions

N/A

Defaults

By default, IPv6 packet drop is disabled. IPv6 packets are learned and processed by UNP.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

Use the no form of this command to disable IPv6 packet drop for the switch.

Examples

-> unp ipv6-drop
-> no unp ipv6-drop

Release History

Release 8.5R2; command was introduced.

Related Commands

show unp global configuration Displays the status of IPv6 packet drop for the switch.

MIB Objects

alaDaUNPGlobalConfiguration
alaDaUNPIpv6Drop
unp ap-mode

Configures the global status of the Access Point (AP) mode. The global AP mode status determines the
default AP mode status that is applied when a port or link aggregate is configured as a UNP port. For
example, if the global status is disabled, the port-level status defaults to disabled; if the global status is
enabled, the port-level status defaults to enabled.

unp ap-mode {enable | disable}{secure [enable | disable]}

Syntax Definitions

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>Sets the AP mode default status to enabled.</td>
</tr>
<tr>
<td>disable</td>
<td>Sets the AP mode default status to disabled.</td>
</tr>
<tr>
<td>secure</td>
<td>Sets the secure ap-mode configuration.</td>
</tr>
</tbody>
</table>

Defaults

By default, the AP mode is enabled for the switch.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Changing the global AP mode status at any given time is allowed but does not change the port-level
  status set for any existing UNP ports. If the AP mode is disabled for the port, it remains disabled after
  the global status change; if the AP mode is enabled for the port, it remains enabled after the global
  status change and any devices or clients learned on the port are not disrupted.
- To change the AP mode status for a specific UNP port, use the `unp port ap-mode` command.
- Use `secure` parameter to enable or disable the secure ap-mode.

Examples

- -> unp ap-mode disable
- -> unp ap-mode enable
- -> unp ap-mode enable secure enable
- -> unp ap-mode enable secure disable

Release History

Release 8.4.1.R02; command was introduced.
Release 8.8.R1; `secure` parameter added
Related Commands

- **unp port ap-mode** Configures AP mode functionality for a UNP bridge port.

MIB Objects

- alaDaUNPGlobalConfiguration
- alaDaUNPApMode
- alaDaUNPPortApModeSecurity
**unp mac-mobility**

Configures the global status of MAC address mobility; any new UNP service profiles will inherit the global MAC mobility status when the profile is created. Enabling MAC address mobility for a UNP service profile supports VRRP router communication over a Shortest Path Bridging (SPB) service domain.

`unp mac-mobility`

`no unp mac-mobility`

---

**Syntax Definitions**

N/A

**Defaults**

By default, the global MAC address mobility status is disabled.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to globally disable UNP MAC address mobility.

- Although the MAC mobility status is configured for UNP profiles, it’s functionality is supported only on profiles mapped to SPB services. SPB service-mapped profiles generate Service Access Points (SAPs) on which a VRRP router can communicate with other VRRP routers across the SPB service domain.

- When a new UNP service profile is created, the MAC mobility status for the profile defaults to the global value. For example, if the global status is enabled, then the new service profile status is set to enabled by default; if the global status is disabled, then the new service profile status is set to disabled by default.

- If the global MAC mobility status is changed at any given time, it will not affect the MAC mobility status of any existing UNP service profiles; the global setting only applies at the time a service profile is created. Any subsequent profiles created will default to the new global MAC mobility status.

- To change the MAC mobility status for a specific UNP service profile, use the `unp profile mac-mobility` command.

**Examples**

```
-> unp mac-mobility
-> no unp mac-mobility
```
**Release History**

Release 8.6R1; command was introduced.

**Related Commands**

- **unp profile mac-mobility**  
  Configures the MAC mobility status for the specified UNP service profile.

- **show unp global configuration**  
  Displays the status of MAC mobility for the switch.

**MIB Objects**

- alaDaUNPGlobalConfiguration
- alaDaUNPMacMobility
unp user flush

Performs a MAC address flush of Access Guardian users (devices learned on UNP ports) based on the specified port, link aggregate, authentication type, or MAC address.

```
unp user flush [port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]] [sap-id [linkagg] sap_id] [service-id service_id] [authentication-type {mac | 802.1x | none} [profile profile_name] [mac-address mac_address]]
```

### Syntax Definitions

- **chassis**
  - The chassis identifier.

- **slot/port[-port2]**
  - The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).

- **agg_id[-agg_id2]**
  - Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).

- **[linkagg] sap_id**
  - A Service Access Point (SAP) ID. Use the optional `linkagg` parameter if the SAP ID is for a link aggregate.

- **service_id**
  - A service ID.

- **mac**
  - Clears only the MAC authenticated users.

- **802.1x**
  - Clears only the 802.1X authenticated users.

- **none**
  - Clears only the users that have not been authenticated.

- **mac_address**
  - A MAC address (e.g., 00:00:39:59:f1:0c).

- **profile_name**
  - The name of an existing UNP profile.

### Defaults

By default, all MAC addresses learned on all UNP ports are flushed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `port` or `linkagg` parameter to flush users on a specific port or link aggregate.

- Use the `sap-id` parameter to flush users learned on a specific SAP. A SAP ID is comprised of a device-facing port or link aggregate (referred to as a service access port) and an encapsulation value that is used to identify the type of device traffic to map to the associated service.

- Use the `service-id` parameter to flush users learned on a specific service.
Use the **authentication-type** parameter with the **mac**, **802.1x**, or **none** options to flush users that were authenticated (MAC or 802.1X) or users that were not authenticated.

Use the **mac-address** parameter to flush a specific device.

Use the **profile** parameter to flush all users associated with the specified profile name. Combine this parameter with the **mac-address** parameter to flush a specific user associated with the specified profile name.

Combine the **sap-id** or **service-id** parameter with the **profile** parameter option to flush only users on the SAP or service that were classified into the specified profile.

Combine the **sap-id** or **service-id** parameter with the **authentication-type** parameter option to flush only users on the SAP or service that were authenticated with the specified authentication type.

**Examples**

```
-> unp user flush
-> unp user flush port 1/1/6
-> unp user flush linkagg 10
-> unp user flush sap-id 1/1/2:50
-> unp user flush service-id 10
-> unp user flush authentication-type mac
-> unp user flush mac-address 00:11:22:33:44:55
-> unp user flush profile unp1-vlan
-> unp user flush profile unp1-vlan mac-address 00:da:95:11:22:01
```

**Release History**

Release 8.3.1; command was introduced.

**Related Commands**

* **show unp user**
  
  Displays information about the devices learned on a UNP port.

**MIB Objects**

```

  alaDaUNPUserFlushPortEnd
  alaDaUNPUserFlushSapIDIfIndex
  alaDaUNPUserFlushSapIDEncapVal
  alaDaUNPUserFlushServiceID
```
**unp 802.1x eapol-version**

Configures EAPoL version V1 or V3 globally on the switch for 802.1x authentication of users on UNP port.

```
unp 802.1x eapol-version {v1 | v3}
```

### Syntax Definitions

**v1**  
Configures EAPoL version V1 for 802.1x authentication.

**v3**  
Configures EAPoL version V3 for 802.1x authentication.

### Defaults

By default, EAPoL version V1 is configured for 802.1x authentication.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- The EAPoL version V3 must be configured on the switch only to authenticate 802.supplicants, which could co-operate with NAS switch using EAPoL version V3.
- When the switch is configured with EAPoL version as V1 or V3, the EAPoL header would carry version 802.1X-2001 (1) or 802.1X-2010 (3) respectively.

### Examples

```
-> unp 802.1x eapol-version v3
```

### Release History

Release 8.7R1; command was introduced.

### Related Commands

- **show unp global configuration**  
  Displays the switch configuration for the global Universal Network Profile (UNP) parameter settings.

### MIB Objects

- **alaDaUNPEapolVersion**
**unp multi-untag-sap**

Enable or disable the multiple untagged user association for UNP dynamic SAP with different services.

```plaintext
unp multi-untag-sap
no unp multi-untag-sap
```

**Syntax Definitions**

N/A

**Defaults**

By default, multiple untagged SAP association is disabled.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- This command allows classification of different untagged users to the same UNP dynamic untagged SAP, which can be associated to different services (like SPB, L2GRE, and VXLAN). For example, MAC-1 on port 1/1/1 gets classified into service with ISID mapping to 1000. Another user MAC-2 on same port 1/1/1 will be allowed to classify into different service with ISID mapping to 2000. This way, SAP 1/1/1:0 would be associated to both ISID 1000 and ISID 2000.
- The untagged SAP creation on different services is supported only for UNP dynamic SAPs.

**Examples**

```
-> unp multi-untag-sap
-> no unp multi-untag-sap
```

**Release History**

Release 8.9R1; command introduced.
**Related Commands**

*show unp global configuration*  Displays the switch configuration for the global Universal Network Profile (UNP) parameter settings.

**MIB Objects**

alaDaUNPMultiUntagSap
**unp profile**

Configures a classification profile that is used to provide role-based access to the switch. This type of profile determines the VLAN or service to which a device can join and applies any additional profile-defined attributes to the device.

When a profile is created with this command, the base command (`unp profile profile_name`) may be used with other command keywords to define attributes for the specified profile. These keywords are listed here and described as separate commands later in this chapter. In addition, some keywords have a `no` form to remove the parameter or return it to its default.

```plaintext
unp profile profile_name
  [qos-policy-list list_name]
  [location-policy policy_name]
  [period-policy policy_name]
  [captive-portal-authentication]
  [captive-portal-profile profile_name]
  [kerberos-authentication]
  [authentication-flag]
  [mobile-tag]
  [maximum ingress-bandwidth bps[k | m]]
  [maximum egress-bandwidth bps[k | m]]
  [maximum ingress-depth bps]
  [maximum egress-depth bps]
  [inactivity-interval seconds]
  [mac-mobility]
  [saa-profile profile_name]

no unp profile profile_name
```

**Syntax Definitions**

- `profile_name`: The name to assign to the UNP classification profile.

**Defaults**

When a profile is created without specifying any parameter values, the profile parameters are set to the following default values:

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>qos-policy-list list_name</td>
<td>No list assigned</td>
</tr>
<tr>
<td>location-policy</td>
<td>No policy assigned</td>
</tr>
<tr>
<td>period-policy</td>
<td>No policy assigned</td>
</tr>
<tr>
<td>captive-portal-authentication</td>
<td>disabled</td>
</tr>
<tr>
<td>captive-portal-profile profile_name</td>
<td>No profile assigned</td>
</tr>
<tr>
<td>kerberos-authentication</td>
<td>disabled</td>
</tr>
<tr>
<td>authentication-flag</td>
<td>disabled</td>
</tr>
</tbody>
</table>
Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the `no` form of this command to remove a profile from the switch configuration.
- Profiles are applied only to traffic received on UNP bridge and access ports or link aggregates.
- After a profile is created, use the `unp profile map` command to map the profile to a VLAN or service.
  - If the profile is mapped to a VLAN, the profile is used to classify traffic received on UNP bridge ports.
  - If the profile is mapped to service parameters, the profile is used to classify traffic received on UNP access ports.
- Any configuration change to a profile will flush all MAC addresses learned on that profile.

Examples

- `-> unp profile unp-profl`
- `-> no unp profile unp-profl`

Release History

Release 8.3.1; command was introduced.
Related Commands

- `unp profile qos-policy-list`: Assigns a QoS policy list to an existing profile.
- `unp profile location-policy`: Assigns a UNP location policy to the specified profile.
- `unp profile period-policy`: Assigns a UNP time-based policy to the specified profile.
- `unp profile captive-portal-authentication`: Configures the status of Captive Portal authentication for the specified profile.
- `unp profile captive-portal-profile`: Assigns a Captive Portal configuration to the specified profile.
- `unp profile kerberos-authentication`: Configures the status of Kerberos snooping for the specified profile.
- `unp profile authentication-flag`: Configures whether the specified profile only allows authenticated devices into the profile.
- `unp profile mobile-tag`: Configures whether a tagged VLAN-port association is created for a device port that is classified into the specified profile.
- `unp profile maximum-ingress-bandwidth`: Configures a maximum ingress bandwidth value that is applied to UNP ports associated with the specified profile.
- `unp profile maximum-egress-bandwidth`: Configures a maximum egress bandwidth value that is applied to UNP ports associated with the specified profile.
- `unp profile maximum-ingress-depth`: Configures a maximum ingress depth value that is applied to UNP ports associated with the specified profile.
- `unp profile maximum-egress-depth`: Configures a maximum egress depth value that is applied to UNP ports associated with the specified profile.
- `unp profile inactivity-interval`: Configures the inactivity interval timer for the specified profile.
- `unp profile mac-mobility`: Configures the MAC address mobility status for the specified UNP service profile to support VRRP router communication over an SPB service domain.
- `unp profile saa-profile`: Assigns an existing Service Assurance Agent (SAA) profile to the specified profile.
- `show unp profile`: Displays the profile configuration for the switch.

MIB Objects

- `alaDaUNPProfileTable`
- `alaDaUNPProfileName`
unp profile qos-policy-list

Configures the QoS policy list attribute for the specified profile. Use this command to assign the name of an existing QoS policy list to the profile. A policy list contains QoS policy rules/ACLs that are applied to devices classified with the associated profile.

unp profile profile_name qos-policy-list list_name

no unp profile profile_name qos-policy-list

Syntax Definitions

profile_name The name of a UNP profile.
list_name The name of a QoS policy list to associate with the specified UNP.

Defaults

By default, no profile attributes are enabled or defined when the profile is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the no form of this command to remove the QoS list name from the profile configuration.
- Specifying a QoS policy list name that is inactive or does not already exist in the switch configuration is allowed. However, the list will remain inactive for the UNP until the list is enabled or configured using the QoS policy list command.
- The QoS policy list is used to define the initial role for any UNP user learned in the profile.

Examples

-> unp profile unp-prof1 qos-policy-list unp-list1
-> no unp profile unp-prof1 qos-policy-list unp-list2

Release History

Release 8.3.1; command was introduced.
Related Commands

- **unp profile**
  Configures a UNP classification profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.

- **policy list**
  Configures a QoS policy list.

- **show unp profile**
  Displays the profile configuration for the switch.

MIB Objects

- **alaDaUNPProfileTable**
- **alaDaUNPProfileName**
- **alaDaUNPProfileQoSPolicy**
unp profile location-policy

Configures the location policy attribute for the specified profile. Use this command to assign the name of an existing UNP location policy to a profile. This type of policy defines criteria (such as the slot/port, system name and location) to determine if a device is accessing the network from a valid location.

**unp profile** *profile_name* **location-policy** *policy_name*

**no unp profile** *profile_name* **location-policy**

---

**Syntax Definitions**

*profile_name* The name of a UNP profile.

*policy_name* The name of an existing UNP location policy.

---

**Defaults**

By default, no profile attributes are enabled or defined when the profile is created.

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove the location policy name from the profile configuration.
- The location policy name specified with this command must already exist in the switch configuration.
- Profile location and time period policies are configurable on the switch or on the RADIUS server. If the policies are configured on both the switch and the RADIUS server, then the switch policies take precedence.
- If a UNP device does not meet the criteria applied through the location policy, the device role is changed to unauthorized.

**Examples**

- `-> unp profile unp-prof1 location-policy alu-na`
- `-> no unp profile unp-prof1 location-policy`

**Release History**

Release 8.3.1; command was introduced.
Related Commands

Configures a UNP location policy.

**show unp profile**  
Displays the profile configuration for the switch.

MIB Objects

alaDaUNPProfileTable
  alaDaUNPProfileName
  alaDaUNPProfileLocationPolicy
**unp profile period-policy**

Configures the period policy attribute for the specified profile. Use this command to assign the name of an existing UNP period policy to a profile. This type of policy specifies the days and times during which a device can access the network.

```
unp profile profile_name period-policy policy_name
no unp profile profile_name period-policy
```

**Syntax Definitions**

- `profile_name`  
The name of a UNP profile.
- `policy_name`  
The name of an existing UNP period policy.

**Defaults**

By default, no profile attributes are enabled or defined when the profile is created.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Model</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900 V72/C32</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove the period policy name from the profile configuration.
- The period policy name specified with this command must already exist in the switch configuration.
- Profile location and time period policies are configurable on the switch or on the RADIUS server. If the policies are configured on both the switch and the RADIUS server, then the switch policies take precedence.
- If a UNP device does not meet the criteria applied through the period policy, the device role is changed to unauthorized.

**Examples**

```
-> unp profile unp-prof1 period-policy office-time
-> no unp profile unp-prof1 period-policy
```

**Release History**

Release 8.3.1; command was introduced.
Related Commands

unp profile
Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.

unp policy validity-period
Configures a UNP period policy.

show unp profile
Displays the profile configuration for the switch.

MIB Objects

alaDaUNPProfileTable
  alaDaUNPProfileName
  alaDaUNPProfilePeriodPolicy
**unp profile captive-portal-authentication**

Configures the status of Captive Portal (CP) authentication for the specified UNP profile. When enabled, the Captive Portal authentication process is triggered for devices classified into the profile.

```
unp profile profile_name captive-portal-authentication
no unp profile profile_name captive-portal-authentication
```

**Syntax Definitions**

`profile_name`  
The name of a UNP profile.

**Defaults**

By default, Captive Portal authentication is disabled for the profile.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to disable Captive Portal authentication for the profile configuration.
- When CP authentication is enabled, the UNP user is assigned an implicit CP pre-login role to facilitate the CP authentication process with the configured CP RADIUS server.
- The CP profile associated with the UNP profile defines the CP RADIUS server to use for the CP authentication process. If a CP profile is not associated with the UNP profile, then the server defined in the global CP configuration for the switch is used instead.
- If CP authentication for the device is successful, the user role is automatically changed according to the CP pass policy list returned from the RADIUS server if it is the highest precedence role known for the user.
- If CP authentication for the device fails, the user role will be changed to the last known highest precedence role for the user.
- When successful CP authentication results in assigning the UNP user to a different profile, CP authentication does not need to be enabled for that profile. For example, if the user is initially assigned to a “Guest” profile and successful CP authentication assigns the user to the “Admin” profile, CP authentication must be enabled on the “Guest” profile but does not have to be enabled on the “Admin” profile.
When CP authentication is disabled for the profile, BYOD redirection is automatically made available to devices assigned to the profile. When CP authentication is enabled, CP is enforced and BYOD redirection is not available.

**Examples**

-> unp profile unp-prof1 captive-portal-authentication
-> no unp profile unp-prof1 captive-portal-authentication

**Release History**

Release 8.3.1; command was introduced.

**Related Commands**

- `unp profile` Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.
- `show unp profile` Displays the profile configuration for the switch.

**MIB Objects**

- `alaDaUNPProfileTable`  
  - `alaDaUNPProfileName`  
  - `alaDaUNPProfileCPortalAuthentication`
unp profile captive-portal-profile

Configures the Captive Portal (CP) profile attribute for the specified profile. Use this command to assign the name of an existing CP profile to a profile. This type of profile defines a CP configuration that is applied to devices when CP authentication is enabled for the profile.

```
unp profile profile_name captive-portal-profile cp_profile_name
```

```
no unp profile profile_name captive-portal-profile
```

**Syntax Definitions**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>profile_name</td>
<td>The name of a UNP profile.</td>
</tr>
<tr>
<td>cp_profile_name</td>
<td>The name of an existing UNP Captive Portal profile.</td>
</tr>
</tbody>
</table>

**Defaults**

By default, no CP profile is assigned to a profile.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the *no* form of this command to remove the CP profile name from the profile configuration.
- The CP profile name specified with this command must already exist in the switch configuration.
- The configuration defined in the CP profile overrides the global CP configuration for the switch.

**Examples**

- `-> unp profile unp-prof1 captive-portal-profile cp-prof`
- `-> no unp profile unp-prof1 captive-portal-profile`

**Release History**

Release 8.3.1; command was introduced.
**Related Commands**

- **unp profile**  
  Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.

- **captive-portal-profile**  
  Configures a Captive Portal profile.

- **show unp profile**  
  Displays the profile configuration for the switch.

**MIB Objects**

alaDaUNPProfileTable
  - alaDaUNPProfileName
  - alaDaUNPProfileCPortalProfile
**unp profile kerberos-authentication**

Enables or disables Kerberos snooping on UNP profile.

**unp profile profile_name kerberos-authentication**

**no unp profile profile_name kerberos-authentication**

**Syntax Definitions**

*profile_name*  
The name of a UNP profile.

**Defaults**

By default, Kerberos is disabled on UNP profile.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6/</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to disable Kerberos snooping on the UNP profile.
- When Kerberos is disabled on the UNP profile, all users learned in that profile are deleted.
- Although the status of Kerberos snooping is configurable for UNP profiles, it’s functionality is supported only on profiles mapped to a VLAN.
- Kerberos is an L3 authentication. It will be available only after successful L2 authentication.
- Kerberos snooping will work only when the switch has at least one Kerberos server IP address configured.

**Examples**

- `-> unp profile pl kerberos-authentication`
- `-> no unp profile pl kerberos-authentication`

**Release History**

Release 8.6R2; command introduced.
Related Commands

- **kerberos inactivity-timer**: Configures the global inactivity timer for Kerberos users.
- **show kerberos configuration**: Displays the Kerberos global configuration.
- **show unp profile**: Displays the profile configuration for the switch.

MIB Objects

- **alaDaUNPProfileTable**
  - **alaDaUNPProfileKerberosAuthentication**
  - **alaDaUNPProfileRowStatus**
**unp profile authentication-flag**

Configures the authentication flag status for the specified UNP profile. When enabled, only devices successfully authenticated are classified into the profile.

```
unp profile profile_name authentication-flag
no unp profile profile_name authentication-flag
```

**Syntax Definitions**

`profile_name` The name of a UNP profile.

**Defaults**

By default, the authentication flag is disabled for the profile.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to disable the authentication flag for the profile configuration.

- When the authentication flag is enabled for a profile, devices that did not pass L2 authentication (802.1X or MAC) are not allowed into the profile. However, other configured classification options are applied to such devices to determine the appropriate network access control for that device.

**Examples**

```
-> unp profile unp-prof1 authentication-flag
-> no unp profile unp-prof1 authentication-flag
```

**Release History**

Release 8.3.1; command was introduced.
Related Commands

**unp profile**
Confirms a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.

**show unp profile**
Displays the profile configuration for the switch.

MIB Objects

alaDaUNPProfileTable
  alaDaUNPProfileName
  alaDaUNPProfileAuthenticationFlag
**unp profile mobile-tag**

Configures the mobile tag status for the specified UNP profile. When enabled, the first user that is learned on a UNP port and classified into the specified UNP profile will cause the UNP port to be added as a tagged member of the VLAN associated with the profile. If the profile is mapped to a service, a tagged virtual port association is created.

```
unp profile profile_name mobile-tag
no unp profile profile_name mobile-tag
```

**Syntax Definitions**

`profile_name`  
The name of a UNP profile.

**Defaults**

By default, the mobile tag status is disabled for the profile.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>

</tr>
<tr>
<td>X24C2</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to disable the mobile tag status for the profile configuration.
- When the mobile tag status is disabled for a profile, any user device classified into the profile will remain learned in that profile. In this case, the tagged/untagged VLAN-port association would be determined based on the user traffic which was learned as tagged or untagged, respectively.
- If the device port is already an untagged member of the VLAN associated with the profile, then a tagged association is not created.

**Examples**

```
-> unp profile unp-prof1 mobile-tag
-> no unp profile unp-prof1 mobile-tag
```

**Release History**

Release 8.3.1; command was introduced.
Related Commands

unp profile  Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.

show unp profile  Displays the UNP profile configuration for the switch.

MIB Objects

alaDaUNPProfileTable
  alaDaUNPProfileName
  alaDaUNPProfileMobileTag
**unp profile maximum-ingress-bandwidth**

Configures the maximum bandwidth limit allocated for ingress traffic on UNP ports assigned to the specified profile.

`unp profile profile_name maximum-ingress-bandwidth bps [k | m]`

`no unp profile profile_name maximum-ingress-bandwidth`

### Syntax Definitions

- `profile_name` The name of a UNP profile.
- `bps[k | m]` The maximum amount of bandwidth, in bits-per-second. The valid range is 0–10485760. The value may be entered as an integer (for example, **10**) or with abbreviated units (for example, **10k, 5m**).

### Defaults

By default, the maximum ingress bandwidth value is not defined for the profile.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of this command to remove the maximum ingress bandwidth value for the specified profile. If a maximum ingress depth value is set for the same profile, then both the maximum ingress bandwidth and depth values must be removed together (on the same command line).

- If the maximum ingress bandwidth value is specified as an integer without an abbreviated unit designation, the value is applied in Kbps by default. For example, if the number **10** is specified, **10K** is the value applied.

- If the maximum ingress bandwidth value is set to zero, then all ingress traffic is allowed on the UNP port.

- The maximum ingress bandwidth, egress bandwidth, and depth values are applied to the port of a user device that is classified into the specified profile.
  - If multiple user devices are classified into different profiles but learned on the same UNP port, the bandwidth parameter values obtained for the last user learned are applied on the port. Parameter values applied through previously learned users are overwritten.
  - Bandwidth parameter values are not applied to UNP link aggregates that are assigned to the profile.
**Examples**

-> unp profile unp-prof1 maximum-ingress-bandwidth 100
-> unp profile unp-prof1 maximum-ingress-bandwidth 10m
-> no unp profile unp-prof1 maximum-ingress-bandwidth
-> unp profile unp-prof1 maximum-ingress-bandwidth 100
-> unp profile unp-prof1 maximum-ingress-depth 50
-> no unp profile unp-prof1 maximum-ingress-bandwidth maximum-ingress-depth

**Release History**

Release 8.3.1; command was introduced.

**Related Commands**

**MIB Objects**

alaDaUNPProfileTable
- alaDaUNPProfileName
- alaDaUNPProfileMaxEgressBandwidth
unp profile maximum-ingress-depth

Configures the maximum ingress queue depth or bucket size assigned to each port that is associated with the specified UNP profile. The depth value is configured in bytes and is used for traffic metering. The queue depth or bucket size determines the amount of buffers allocated to the UNP port. When the queue or bucket size is reached, the switch starts dropping packets.

`unp profile profile_name maximum-ingress-depth bytes`

`no unp profile profile_name maximum-ingress-depth`

Syntax Definitions

(profile_name) The name of a UNP profile.

(bytes) The maximum ingress depth value in bytes. The valid range is 0–16384.

Defaults

By default, the maximum ingress depth value is determined by dividing the maximum ingress bandwidth value by 25. If the result of this calculation is 0 or 1, then 2K is used as the ingress depth value.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the `no` form of this command to remove the maximum ingress depth value from the profile.

- The maximum ingress depth value is configured in conjunction with the maximum ingress bandwidth parameter. When the ingress depth value is reached, the switch starts to drop packets.

- Configure the maximum ingress bandwidth rate (`unp profile maximum-ingress-bandwidth`) before attempting to set the maximum ingress depth value.

- The maximum ingress bandwidth and depth values are applied to the port of a user device that is classified into the specified profile.
  - If multiple user devices are classified into different profiles but learned on the same UNP port, the bandwidth parameter values obtained for the last user learned are applied on the port. Parameter values applied through previously learned users are overwritten.
  - Bandwidth parameter values are not applied to UNP link aggregates that are assigned to the profile.

Examples

- `-> unp profile unp-prof1 maximum-ingress-bandwidth 10`
- `-> unp profile unp-prof1 maximum-ingress-depth 5`
-> no unp profile unp-prof1 maximum-ingress-depth

**Release History**

Release 8.3.1; command was introduced.

**unp profile maximum-egress-depth**

Configures the maximum ingress queue depth or bucket size assigned to each port that is associated with the specified UNP profile. The depth value is configured in bytes and is used for traffic metering. The queue depth or bucket size determines the amount of buffers allocated to the UNP port. When the queue or bucket size is reached, the switch starts dropping packets.

```
unp profile profile_name maximum-egress-depth bytes
no unp profile profile_name maximum-egress-depth
```

**Syntax Definitions**

- **profile_name**: The name of a UNP profile.
- **bytes**: The maximum egress depth value in bytes. The valid range is 0–16384.

**Defaults**

By default, the maximum egress depth value is determined by dividing the maximum ingress bandwidth value by 25. If the result of this calculation is 0 or 1, then 2K is used as the ingress depth value.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>

**Usage Guidelines**

- Use the `no` form of this command to remove the maximum egress depth value from the profile.
- The maximum egress depth value is configured in conjunction with the maximum egress bandwidth parameter. When the egress depth value is reached, the switch starts to drop packets.
- Configure the maximum egress bandwidth rate (unp profile maximum-egress-bandwidth) before attempting to set the maximum egress depth value.
- The maximum egress bandwidth and depth values are applied to the port of a user device that is classified into the specified profile.
  - If multiple user devices are classified into different profiles but learned on the same UNP port, the bandwidth parameter values obtained for the last user learned are applied on the port. Parameter values applied through previously learned users are overwritten.
  - Bandwidth parameter values are not applied to UNP link aggregates that are assigned to the profile.

**Examples**

```
-> unp profile unp-prof1 maximum-egress-bandwidth 10
-> unp profile unp-prof1 maximum-egress-depth 5
```
-> no unp profile unp-prof1 maximum-egress-depth

**Release History**

Release 8.3.1; command was introduced.

**Related Commands**

- **unp profile**
  Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.

- **unp profile maximum-egress-bandwidth**
  Configures the maximum bandwidth limit allocated for egress traffic on UNP ports assigned to the specified UNP profile.

- **show unp profile**
  Displays the profile configuration for the switch.

- **show unp port bandwidth**
  Displays the bandwidth parameter values applied to a UNP port or link aggregate.

**MIB Objects**

- **alaDaUNPPProfileTable**
  - **alaDaUNPPProfileName**
  - **alaDaUNPPProfileMaxEgressDepth**
**unp profile inactivity-interval**

Configures whether or not an authenticated device is automatically logged out of the network after a specific period of inactivity (MAC address for the device has aged out). This timer value applies only to devices learned in the specified profile.

```
unp profile profile_name inactivity-interval seconds
```

**Syntax Definitions**

- `profile_name`: The name of a UNP profile.
- `seconds`: The inactivity timer value. The valid range is 10 to 600 seconds.

**Defaults**

By default, the inactivity interval value is set to 10 seconds.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Make sure the configured inactivity interval time is set to a value greater than the MAC address aging time for the switch.
- When a specific time is configured for the inactivity interval timer, the device is not logged out of the network if the MAC address aging time expires before the configured timer value.
- When the inactivity interval time is changed for the profile, the new value does not apply to existing authenticated users until the user is flushed out or when the user is authenticated again.
- If a user undergoes MAC authentication and then secondary Captive Portal authentication, the higher of the two inactivity logout timer values returned is applied to the device.
- An inactivity logout timer value is also configurable through authentication, authorization, and accounting (AAA) commands. The value set through the AAA commands takes precedence over the inactivity interval value set for the UNP.

**Examples**

- `-> unp profile unp-prof1 inactivity-interval 500`
- `-> unp profile unp-prof1 inactivity-interval 10`
**Release History**

Release 8.3.1; command was introduced.

**Related Commands**

- **unp profile**  
  Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.

- **show unp profile**  
  Displays the profile configuration for the switch.

**MIB Objects**

- **alaDaUNPProfileTable**
  - **alaDaUNPProfileName**
  - **alaDaUNPProfileInactivityInterval**
unp profile mac-mobility

Configures the MAC address mobility status for the specified UNP service profile. Enable MAC address mobility for a UNP service profile to support VRRP router communication over an SPB service domain.

**unp profile profile_name mac-mobility**

**no unp profile profile_name mac-mobility**

**Syntax Definitions**

*profile_name*  
The name of a UNP profile that is mapped to SPB service parameters.

**Defaults**

By default, the MAC mobility status for the SPB service-mapped profile is set to the global MAC mobility status when the profile is created.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the *no* form of this command to disable the MAC mobility status for the profile configuration.
- When the MAC mobility status is disabled for a profile, VRRP MAC address movement that is required for the VRRP master/slave election process is disrupted. This may cause a VRRP configuration to generate two VRRP masters within the SPB service domain.
- Although the MAC mobility status is configured for UNP profiles, it’s functionality is supported only on profiles mapped to SPB services. SPB service-mapped profiles generate Service Access Points (SAPs) on which a VRRP router can communicate with other VRRP routers across the SPB service domain.
- To support VRRP router communication over an SPB service domain, the following configuration is required before the VRRP routers are configured:
  - Enable MAC address mobility for the SPB service-mapped UNP profile.
  - Assign the service profile to a UNP access port to create a persistent UNP SAP on which a VRRP router will communicate. A persistent SAP does not age out and will ensure an uninterrupted flow of VRRP advertisements between the VRRP master and slave routers.

**Examples**

- `-> unp profile unp-prof1 mac-mobility`
- `-> no unp profile unp-prof1 mac-mobility`
**Release History**

Release 8.6R1; command was introduced.

**Related Commands**

- **unp mac-mobility**
  Configures the global MAC mobility status for the switch.

- **unp profile**
  Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.

- **unp profile map service-type spb**
  Configures the mapping of SPB service parameters to the specified UNP profile. The service parameter values are used to define an SPB SAP on which profile traffic is forwarded.

- **show unp profile**
  Displays the UNP profile configuration for the switch.

**MIB Objects**

- **alaDaUNPProfileTable**
  - **alaDaUNPProfileMacMobility**
**unp profile saa-profile**

Assigns a Service Assurance Agent (SAA) profile to the specified UNP profile. Although an SAA profile can be assigned to a UNP profile with this command, an SAA profile is mainly used by the OmniVista network management application to monitor connections between virtual machines (VMs) in a data center network.

```
unp profile profile_name saa-profile profile_name
```

```
no unp profile profile_name saa-profile
```

**Syntax Definitions**

- **profile profile_name**: The name of a UNP profile.
- **saa-profile profile_name**: The name of the SAA profile to assign to the UNP profile.

**Defaults**

By default, no SAA profile is assigned to a UNP profile.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove an SAA profile assignment from a UNP profile configuration.
- The SAA profile specified with this command must already exist in the switch configuration.

**Examples**

```
-> unp profile unp-prof1 saa-profile saa1
```

```
-> no unp profile unp-prof1 saa-profile
```

**Release History**

Release 8.3.1; command was introduced.
Related Commands

**unp profile**  Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.

**unp saa-profile**  Configures an SAA profile.

**show unp saa-profile**  Displays the SAA profile configuration for the switch.

**show unp profile**  Displays the profile configuration for the switch.

MIB Objects

alaDaUNPProfileTable
  alaDaUNPProfileName
  alaDaUNPProfileSaaProfile
**unp profile map vlan**

Configures the mapping of a standard VLAN to a UNP profile. When a device is assigned to a profile through authentication or classification, the device and the port on which the device was learned are dynamically assigned to the VLAN that is mapped to the profile.

**unp profile profile_name map vlan vlan_id**

---

**Syntax Definitions**

- `profile_name`: The name of an existing UNP profile.
- `vlan_id`: The VLAN ID number to associate with the specified profile name. Devices assigned to the profile are assigned to the associated VLAN.

---

**Defaults**

By default, no mapping configuration is applied to a profile.

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

---

**Usage Guidelines**

- Removing a VLAN mapping configuration requires deleting the entire profile from the switch configuration (`no unp profile profile_name`).
- The VLAN associated with a profile must already exist in the switch configuration, unless one of the following conditions occur:
  - The dynamic VLAN configuration functionality is enabled for the switch.
  - The VLAN mapping to a profile is done when the switch boots up.
- Configuring a new VLAN mapping for a profile will overwrite the existing VLAN mapping for that profile. Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.
- Only one type of profile mapping (VLAN or service) is associated with a profile at any given time.
  - If a profile is mapped to a VLAN, then the profile is applied to traffic received on UNP bridge ports.
  - If a profile is mapped to service parameters, then the profile is applied to traffic received on UNP access ports.

---

**Examples**

- `-> unp profile unpl-vlan map vlan 10`
Access Guardian Commands

MIB Objects

alaDaUNPProfileTable
  alaDaUNPProfileName
alaDaUNPProfileMapVlanTable
  alaDaUNPProfileMapVlanVlanID
unp profile map service-type spb

Configures the mapping of Shortest Path Bridging (SPB) parameters to the specified UNP profile. When a device is dynamically assigned to the profile through authentication or classification, an SPB service access point (SAP) is automatically created using the specified profile parameters. Traffic from the device is then forwarded on the SAP.

```
unp profile profile_name map service-type spb tag-value {0 | ALL | outer_qtag:all | qtag | outer_qtag:inner_qtag} isid instance_id bvlan bvlan_id [multicast-mode {headend | tandem}] [vlan-translation] [igmp-snooping [profile {default | ipms_profile}]] [mld-snooping [profile {default | ipms_profile}]] [remove-ingress-tag]
```

```
no unp profile profile_name map service-type spb [vlan-translation] [igmp-snooping [profile]] [mld-snooping [profile]] [remove-ingress-tag]
```

<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to disable VLAN translation, IGMP snooping, MLD snooping, or removing the ingress tag for the UNP service profile. To remove any other SPB mapping parameter requires deleting the entire profile from the switch configuration (`no unp profile profile_name`).

- Configuring a new SPB mapping for a profile will overwrite the existing SPB mapping for that profile.

- Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.

- Only one type of profile mapping (VLAN or service) is associated with a profile at any given time.
  - If a profile is mapped to service parameters, then the profile is applied to traffic received on UNP access ports.
  - If a profile is mapped to a VLAN, then the profile is applied to traffic received on UNP bridge ports.

- The `tag-value` parameter specifies the VLAN tag values that are used to create the SAP to which profile traffic is mapped. The SAP is then bound to the SPB service that is dynamically created based on the specified I-SID and BVLAN values.

- Consider the following when configuring the profile tag value:
  - If the tag value is set to zero, the SAP for the classified traffic is created using the VLAN tags of the traffic. For example, a SAP with an encapsulation value set to 1/12:5 is created when classified traffic received on port 1/12 is single-tagged with VLAN ID 5.
  - Enabling the trust VLAN tag option for the UNP service port triggers the same functionality as setting the service profile tag value to zero. In both cases, the VLAN tags of the classified traffic are used to specify the encapsulation value of the SAP to which the traffic is mapped.
If the trust VLAN tag option is disabled for the UNP port and the service profile tag value is not set to zero (for example, `tag-value 10`), the VLAN tag values of the classified traffic are compared to the configured profile tag value. If the traffic tag values match the profile tag value, the traffic is mapped to the appropriate SAP. If the traffic tags do not match, traffic is not mapped to a SAP.

- If the trust VLAN tag option is disabled for the UNP port and the service profile tag value is not set to zero (for example, `tag-value 10`), the VLAN tag values of the classified traffic are compared to the configured profile tag value. If the traffic tag values match the profile tag value, the traffic is mapped to the appropriate SAP. If the traffic tags do not match, traffic is not mapped to a SAP.

- UNP first checks the switch configuration to see if a SAP already exists for the expected VLAN tag value (CVLAN tags) and I-SID. If a SAP already exists, the MAC addresses are learned on that SAP. If the SAP does not exist, the switch dynamically creates one for the profile traffic.

- If the I-SID specified with this command does not exist in the switch configuration, the switch will dynamically create the expected service and then the SAP as needed.

- The BVLAN ID specified with this command must already exist in the switch configuration.

- Dynamically creating services and related SAPs is subject to available switch resources. If an attempt to dynamically create a service or SAP fails, the MAC addresses classified for the service profile are learned as filtering.

- When an SPB service is configured to use the head-end multicast mode, a non-unicast packet received on an SPB access port is replicated once for each receiver in the provider backbone bridge (PBB) network using its unicast base MAC (BMAC) address.

- When an SPB service is configured to use the tandem multicast mode, a non-unicast packet received on an SPB access port is replicated once at each node using the multicast group address.

- Enabling VLAN translation at the service level is only applicable if the corresponding access ports for the SAPs also have VLAN translation enabled. The exception to this is on an OmniSwitch 9900, where VLAN translation is configured only at the service level.

- When configuring the IGMP and MLD snooping mapping parameters, it is necessary to also configure the VLAN translation and multicast mode status for the profile mapping.

**Examples**

```
-> unp profile unp1-spb map service-type spb tag-value 10 isid 1510 bvlan 4001
-> unp profile unp2-spb map service-type spb tag-value 20 isid 1520 bvlan 4002
  multicast-mode tandem vlan-xlation remove-ingress-tag
-> unp profile unp3-spb map service-type spb tag-value 30 isid 1530 bvlan 4003

unp profile map service-type vxlan

Configures the mapping of Virtual eXtensible LAN (VXLAN) parameters to the specified UNP profile. When a device is dynamically assigned to the profile through authentication or classification, a VXLAN service access point (SAP) is automatically created using the specified profile parameters. Traffic from the device is then forwarded on the SAP.

unp profile profile_name map service-type vxlan tag-value {0 | ALL | outer_qtag:all | qtag | outer_qtag:inner_qtag} vnid vxlan_id {far-end-ip-list ip_list_name [multicast-group mc_group_address] | multicast-group mc_group_address [far-end-ip-list ip_list_name]} [multicast-mode {tandem | headend | hybrid}] [vlan-xlation] [mac-orchestration] [remove-ingress-tag]

no unp profile profile_name map service-type vxlan [far-end-ip-list | multicast-group] [vlan-xlation] [mac-orchestration] [remove-ingress-tag]

Syntax Definitions

profile_name The name of an existing UNP profile.
0 Use VLAN tag information from classified traffic to create the Service Access Point (SAP) for the traffic. If the traffic is untagged, the SAP is created with 0 as the encapsulation value (for example, 1/12:0).
qtag The outer VLAN ID tag to use when creating a SAP for single-tagged traffic.
outer_qtag:inner_qtag An outer VLAN ID tag and an inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
ALL Any outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
outer_qtag:all An outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
vxlan_id The VXLAN network identifier that identifies the VLAN segment form where the frames originate. This value is used to create the VXLAN service that is required to dynamically create the SAP.
ip_list_name The name of an existing list that contains the IP addresses for the far-end VXLAN Tunnel End Points (VTEPs). The valid range is 1–32 characters. The IP addresses in this list are used to dynamically create service distribution points (SDPs) for the VXLAN service.
mc_group_address The multicast IP address of the group to which this service will join.
tandem Specifies the tandem replication mode for the service associated with this UNP. This mode uses PIM routing and sends traffic through multicast SDPs.
headend Specifies the head-end replication mode for the service associated with this UNP. This mode sends traffic through unicast SDPs.
hybrid Specifies the hybrid replication mode for the service associated with this UNP. This mode uses both the head-end and tandem methods.
vlan-translation Configures egress VLAN translation for the VXLAN service associated with this UNP.
mac-orchestration
This parameter is automatically configured through OmniSwitch integration with Open vSwitch Database (OVSD) protocols. See the "Web Services, CLI Scripting, OpenFlow, and AOS Micro Services (AMS)" chapter in the OmniSwitch AOS Release 8 Switch Management Guide for more information.

remove-ingress-tag
Configures whether or not the customer VLAN tag is removed from ingress packets. Removing the customer VLAN tag is useful when forwarding packets to third-party devices that require untagged packets.

Defaults
By default, no mapping configuration is applied to a profile. When the VXLAN mapping is configured, the following default values are applied for the optional parameters:

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>multicast-mode {headend</td>
<td>tandem</td>
</tr>
<tr>
<td>vlan-xlation {enable</td>
<td>disable}</td>
</tr>
<tr>
<td>mac-orchestration</td>
<td>disabled</td>
</tr>
<tr>
<td>remove-ingress-tag</td>
<td>disabled</td>
</tr>
</tbody>
</table>

Platforms Supported
This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>X72/Q32</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

Usage Guidelines
- Use the no form of this command to disable VLAN translation, remove a far-end IP list, remove a multicast group IP address, or disable removing the ingress tag for the profile. To remove any other VXLAN mapping parameter requires deleting the entire profile from the switch configuration (no unp profile profile_name).
- Configuring a new VXLAN mapping for a profile will overwrite the existing VXLAN mapping for that profile.
- Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.
- Only one type of profile mapping (VLAN or service) is associated with a profile at any given time.
  - If a profile is mapped to service parameters, then the profile is applied to traffic received on UNP access ports.
  - If a profile is mapped to a VLAN, then the profile is applied to traffic received on UNP bridge ports.
The `tag-value` parameter specifies the VLAN tag values that are used to create the SAP to which profile traffic is mapped. The SAP is then bound to the VXLAN service that is dynamically created based on the specified VXLAN ID value.

Consider the following when configuring the profile tag value:

- If the tag value is set to zero, the SAP for the classified traffic is created using the VLAN tags of the traffic. For example, a SAP with an encapsulation value set to 1/12:5 is created when classified traffic received on port 1/12 is single-tagged with VLAN ID 5.
- Enabling the trust VLAN tag option for the UNP service port triggers the same functionality as setting the service profile tag value to zero. In both cases, the VLAN tags of the classified traffic are used to specify the encapsulation value of the SAP on which the traffic is forwarded.
- If the trust VLAN tag option is disabled for the UNP port and the service profile tag value is not set to zero (for example, `tag-value 10`), the VLAN tag values of the classified traffic are compared to the configured profile tag value. If the traffic tag values match the profile tag value, the traffic is forwarded on the SAP. If the traffic tags do not match, traffic is not forwarded on the SAP.

UNP first checks the switch configuration to see if a SAP already exists for the expected VLAN tag value (CVLAN tags). If a SAP already exists, the MAC addresses are learned on that SAP. If the SAP does not exist, the switch dynamically creates one based on the profile attributes for the profile traffic.

If the VXLAN ID specified with this command does not exist in the switch configuration, the switch will dynamically create the expected service and then the SAP as needed.

Dynamically creating services and related SAPs is subject to available switch resources. If an attempt to dynamically create a service or SAP fails, the MAC addresses classified for the service profile are learned as filtering.

The same far-end IP list can be used for multiple services that have to reach the same set of far-end VTEPs.

Configuring both a far-end IP list and a multicast group IP address is allowed for the same profile.

The following multicast modes are supported for a VXLAN service:

- **Tandem**: In this mode, PIM multicast routing is required to discover the neighbor nodes and assign membership to VTEP nodes that desire to be in the same multicast group. This also requires the manual configuration of a multicast SDP object to tunnel traffic to the other VTEP nodes that belong to the same multicast group.
- **Headend**: In this mode, unicast SDP objects are manually configured to tunnel traffic to the far-end nodes. In this case, PIM multicast routing is not required. Any BUM traffic is replicated and one copy is sent to each VTEP node as specified by the unicast SDP object.
- **Hybrid**: In this mode, traffic is tunneled from this service instance to both a group of VTEPs that belong to the same multicast group address and to the VTEP nodes that are not associated with the same multicast group address.

Configuring a VXLAN service on an OmniSwitch 6900-V72/C32 or OmniSwitch 6900-X48C6/T48C6 is supported only when the service is configured to use the head-end multicast mode; tandem mode services are not supported. If the hybrid mode is selected, only the head-end mode is active.

Enabling VLAN translation at the service level is only applicable if the corresponding access ports for the SAPs also have VLAN translation enabled. The exception to this is on an OmniSwitch 9900, where VLAN translation is configured only at the service level.
Examples

-> unp profile unp1-vxlan map service-type vxlan tag-value 10:12 vnid 100 multicast-group 225.1.1.1

unp vxlan far-end-ip-list

Configures a list of IP addresses, each of which is assigned to the Loopback0 interface of a far-end VXLAN node. The list name is assigned to a profile through the mapping of VXLAN service parameters to the profile. This allows multiple far-end nodes to be associated with the service created for the VXLAN Network ID (VNID) specified in the VXLAN profile.

unp vxlan far-end-ip-list ip_list_name ip_address [ip_address]

no unp vxlan far-end-ip-list ip_list_name [ip_address [ip_address]]

Syntax Definitions

<table>
<thead>
<tr>
<th>ip_list_name</th>
<th>The name of the list that contains the IP addresses for the far-end VXLAN Tunnel End Points (VTEP). The valid range is 1–32 characters.</th>
</tr>
</thead>
<tbody>
<tr>
<td>ip_address</td>
<td>The IP address of the Loopback0 interface for the far-end VTEP node. The Loopback0 address is required on every VXLAN node that serves as a VTEP. Use a space to specify a list of IP addresses to assign to the list name.</td>
</tr>
</tbody>
</table>

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>X72/Q32</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the no form of this command to remove the far-end list from the switch configuration or to remove an individual IP address from the list.
- The reachability of a far-end IP address is not tested. Make sure the addresses are valid before adding them to the list.
- There is no limit to the number of IP addresses that can be assigned to a single list.
- The same far-end IP list can be used for multiple services that have to reach the same set of far-end VTEPs.
- The far-end IP list is used to build service distribution points (SDPs) for VXLAN services.
- When there is any change to the VXLAN profile, all users associated with that profile are flushed.
• Configuring VXLAN service on an OmniSwitch 6900-V72/C32 is supported only when the service is configured to use the head-end multicast mode; tandem mode services are not supported. If the hybrid mode is selected, only the head-end mode is active.

**Examples**

- `unp vxlan far-end-ip-list vtep-list1 10.1.1.1 11.1.1.1 12.1.1.1 13.1.1.1`
- `no unp vxlan far-end-ip-list vtep-list1 10.1.1.1`
- `no unp vxlan far-end-ip-list vtep-list1`

**Release History**

Release 7.3.4; command was introduced.

**Related Commands**

- `unp profile` Configures a UNP profile.
- `unp profile map service-type vxlan` Maps VXLAN parameters, such as a far-end IP list, to a UNP profile.
- `show unp profile` Displays the profile configuration for the switch.
- `show unp vxlan far-end-ip-list` Displays the contents of VXLAN far-end IP address lists.

**MIB Objects**

  - `alaDaUNPVxlanFarEndIPListIPAddressCount`
  - `alaDaUNPVxlanFarEndIPListRemove`
**unp profile map service-type l2gre**

Configures the mapping of a Layer 2 Generic Routing Encapsulation (L2 GRE) tunnel to the specified UNP profile. When a device is dynamically assigned to the profile through authentication or classification, an L2 GRE Service Access Point (SAP) is dynamically created using the specified service parameters. Traffic from the device is then encapsulated and forwarded through an L2 GRE tunnel to a tunnel aggregation switch.

```
unp profile profile_name map service-type l2gre tag-value {0 | ALL | outer_qtag:all | qtag | outer_qtag:inner_qtag} vpnid vpn_id {far-end-ip-list ip_list_name | far-end-ip ip_address} [vlan-xlation] [remove-ingress-tag]
```

```
no unp profile profile_name map service-type l2gre [far-end-ip-list | far-end-ip] [vlan-xlation] [remove-ingress-tag]
```

**Syntax Definitions**

- **profile_name**
  - The name of an existing UNP profile.
- **0**
  - Use VLAN tag information from classified traffic to create the Service Access Point (SAP) for the traffic. If the traffic is untagged, the SAP is created with 0 as the encapsulation value (for example, 1/12:0).
- **qtag**
  - The outer VLAN ID tag to use when creating a SAP for single-tagged traffic.
- **outer_qtag:inner_qtag**
  - An outer VLAN ID tag and an inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
- **ALL**
  - Any outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
- **outer_qtag:all**
  - An outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
- **vpn_id**
  - A GRE tunnel Virtual Private Network (VPN) ID. This is a unique value that is used in the header of a GRE encapsulated packet and should be the same at both ends of a Guest Tunnel.
- **ip_list_name**
  - The name of an existing list that contains the IP address of the Loopback0 interface configured on the far-end tunnel aggregation switch. The valid range is 1–32 characters. The IP address in this list is used to dynamically create the L2 GRE tunnel from the edge switch to the tunnel aggregation switch.
- **ip_address**
  - The IP address of the Loopback0 interface configured on the far-end tunnel aggregation switch.
- **vlan-xlation**
  - Configures egress VLAN translation for the service associated with this UNP.
- **remove-ingress-tag**
  - Configures whether or not the customer VLAN tag is removed from ingress packets. Removing the customer VLAN tag is useful when forwarding packets to third-party devices that require untagged packets.
**Defaults**

By default, no mapping configuration is applied to a profile. When the L2 GRE tunnel service mapping is configured, the following default values are applied for the optional parameters:

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>vlan-xlation</td>
<td>disabled</td>
</tr>
<tr>
<td>remove-ingress-tag</td>
<td>disabled</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to do the following;
  - remove a far-end IP list or a far-end IP address for the profile.
  - disable VLAN translation for the dynamic SAP.
  - disable removing the ingress tag.

- To remove any other L2 GRE mapping parameters requires deleting the entire profile from the switch configuration (**no unp profile profile_name**).

- The **tag-value** parameter specifies the VLAN tag values that are used to create the SAP to which profile traffic is mapped. The SAP is then bound to the L2 GRE tunnel that is dynamically created based on the specified VPN ID value.

- The same far-end IP address can be used for multiple L2 GRE tunnels that have to reach the same far-end tunnel aggregation switch.

- When L2GRE and VXLAN both are configured on a switch, these services must not use the same gateway.

- Configuring a new L2 GRE tunnel mapping for a profile will overwrite the existing tunnel mapping for that profile.

- Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.

- Only one type of profile mapping (VLAN or service) is associated with a profile at any given time.

- A UNP L2 GRE profile is applied to users learned on UNP bridge and access ports.
  - Classifying users learned on UNP access ports into an L2 GRE profile is not supported on the OmniSwitch 6560; only users learned on UNP bridge ports are classified.
  - Classifying users learned on UNP bridge ports into an L2 GRE profile is not supported on the OmniSwitch 6900-T20/T40, OmniSwitch 6900-X20/X40, OmniSwitch 6900-V72/C32,
OmniSwitch 6900-X48C6/T48C6/X48C4E/V48C8/C32E, OmniSwitch 6860N; only users learned on UNP access ports are classified. Port-isolation is also not supported on these platforms.

- Only one UNP L2 GRE profile (one L2 GRE service) can be applied to users learned on UNP bridge ports. The exception to this is on an OmniSwitch 6560 where up to eight UNP L2 GRE profiles (eight L2 GRE services) can be applied to users learned on UNP bridge ports.
- Multiple UNP L2 GRE profiles (multiple L2 GRE services) can be applied to users learned on UNP access ports.
- When users are learned on UNP bridge ports and classified into an L2 GRE profile, the VLAN translation status is not applied. VLAN translation only applies to user traffic learned on UNP access ports.
- The mobile tag functionality is supported on UNP L2 GRE profiles and is applied when users learned on UNP access ports are dynamically assigned to the profile; this functionality is not supported for users learned on UNP bridge ports. Use the `unp profile mobile-tag` command to configure the mobile tag status for the profile.
- There is no VLAN association with the SAP created for the L2 GRE tunnel, so all traffic egressing on the UNP bridge port will be untagged.

- Make sure that only one SAP is associated with the specified VPN ID for this profile.

- UNP first checks the switch configuration to see if an L2 GRE tunnel SAP already exists for the expected VPN ID. If a SAP already exists, the MAC addresses are learned on that SAP. If the SAP does not exist, the switch dynamically creates one based on the profile attributes for the profile traffic.

- If the GRE tunnel VPN ID specified with this command does not exist in the switch configuration, the switch will dynamically create the expected service and then the SAP as needed.

- Dynamically creating services and related SAPs is subject to available switch resources. If an attempt to dynamically create a service or SAP fails, the MAC addresses classified for the UNP GRE tunnel profile are learned as filtering.

- When a Guest Tunnel is established on an underlying physical port, there can be only one gateway supported on that port for carrying the GRE encapsulated traffic.

- When L2GRE is used to tunnel guest traffic from edge switch to tunnel aggregation switch, configure only one L2GRE service on the edge switch. In other scenarios of L2GRE service, it is advised that the auto-discovery is disabled, and all required services and binds are manually configured.

**Examples**

```
-> unp profile guest-profile map service-type l2gre tag-value 0 vpnid 100 far-end-ip 192.168.10.1
-> unp profile guest-profile map service-type l2gre tag-value 0 vpnid 100 far-end-ip-list l2greEndpoint
-> unp profile guest-profile map service-type l2gre tag-value 0 vpnid 200 far-end-ip 192.168.10.1 vlan-xlation remove-ingress-tag
-> no unp profile guest-profile map service-type l2gre far-end-ip-list
-> no unp profile guest-profile map service-type l2gre vlan-xlation
-> no unp profile guest-profile map service-type l2gre remove-ingress-tag
-> no unp profile guest-profile map service-type l2gre
-> no unp profile guest-profile
```

**Release History**

Release 8.4.1.R02; command was introduced.
Release 8.6R1; `vlan-xlation` parameter added.
Release 8.7R2: **remove-ingress-tag** parameter added.
Release 8.8.R1: **ALL** and **outer_qtag:all** parameters added.

**Related Commands**

- **unp profile**
  Configures a UNP profile.

- **unp profile mobile-tag**
  Configures the mobile tag status for the specified profile.

- **unp l2gre far-end-ip-list**
  Configures a list of IP addresses that represent far-end Guest Tunnel Termination Switch.

**unp l2gre far-end-ip-list**

Configures an IP address list that contains the IP address of the Loopback0 interface configured on the far-end L2 GRE tunnel aggregation switch. The list name is assigned to a profile through the mapping of L2 GRE tunnel parameters to the profile.

**unp l2gre far-end-ip-list** *ip_list_name ip_address*

**no unp l2gre far-end-ip-list** *ip_list_name [ip_address]*

---

**Syntax Definitions**

- **ip_list_name**
  The name of the list that contains the IP address for the far-end tunnel aggregation switch. The valid range is 1–32 characters.

- **ip_address**
  The IP address of the Loopback0 interface for the far-end tunnel aggregation switch.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>

    alaDaUNPL2GreFarEndIPList IPAddress Count
    alaDaUNPL2GreFarEndIPList Remove
unp profile map service-type static

Configures the mapping of an existing Shortest Path Bridging (SPB), Virtual eXtensible LAN (VXLAN), or Layer 2 Generic Routing Encapsulation (L2 GRE) service ID to the specified UNP profile. This type of profile mapping is only valid if the specified SPB, VXLAN, or L2 GRE service is already configured; the switch does not dynamically create the service. The specified service ID is then used to dynamically create a service access point (SAP) based on the specified tag value.

```
unp profile profile_name map service-type static tag-value {0 | ALL | outer_qtag:all | qtag | outer_qtag:inner_qtag |} service-id service_id
```

Syntax Definitions

- `profile_name`: The name of an existing UNP profile.
- `0`: Use VLAN tag information from classified traffic to create the Service Access Point (SAP) for the traffic. If the traffic is untagged, the SAP is created with 0 as the encapsulation value (for example, 1/12:0).
- `qtag`: The outer VLAN ID tag to use when creating a SAP for single-tagged traffic.
- `outer_qtag:inner_qtag`: An outer VLAN ID tag and an inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
- `ALL`: Any outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
- `outer_qtag:all`: An outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
- `service_id`: An existing (statically configured) numerical value that identifies a specific SPB, VXLAN, or L2 GRE service. The valid service ID range is 1–32767. Specifying a VXLAN service ID is supported only on the OmniSwitch 6900-X72/Q32 and OmniSwitch 6900-V72/C32.

Defaults

By default, no mapping configuration is applied to a profile.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Removing a static service mapping configuration requires deleting the entire profile from the switch configuration (no unp profile profile_name).
- Configuring a new static service mapping for a profile will overwrite the existing static service mapping for that profile.

- Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.

- Only one type of profile mapping (VLAN or service) is associated with a profile at any given time.
  - If a profile is mapped to service parameters, then the profile is applied to traffic received on UNP access ports.
  - If a profile is mapped to a VLAN, then the profile is applied to traffic received on UNP bridge ports.

- The **tag-value** parameter specifies the VLAN tag values that are used to create the SAP to which profile traffic is mapped. The SAP is then bound to the service ID value specified with this command.

- Consider the following when configuring the profile tag value:
  - If the tag value is set to zero, the SAP for the classified traffic is created using the VLAN tags of the traffic. For example, a SAP with an encapsulation value set to 1/12:5 is created when classified traffic received on port 1/12 is single-tagged with VLAN ID 5.
  - Enabling the trust VLAN tag option for the UNP service port triggers the same functionality as setting the service profile tag value to zero. In both cases, the VLAN tags of the classified traffic are used to specify the encapsulation value of the SAP to which the traffic is mapped.
  - If the trust VLAN tag option is disabled for the UNP port and the service profile tag value is not set to zero (for example, **tag-value** 10), the VLAN tag values of the classified traffic are compared to the configured profile tag value. If the traffic tag values match the profile tag value, the traffic is mapped to the appropriate SAP. If the traffic tags do not match, traffic is not mapped to a SAP.

- UNP first checks the switch configuration to see if a SAP already exists for the expected VLAN tag value (CVLAN tags) and service ID. If a SAP already exists, the MAC addresses are learned on that SAP. If the SAP does not exist, the switch dynamically creates one for the profile traffic.

- When there is a MAC flush for all UNP users learned and forwarded on the static service ID:
  - UNP triggers the removal of all dynamic SAPs associated with the service ID.
  - The service ID is not removed because the service was statically created; not dynamically generated through UNP.

- A static service ID cannot be removed until all the UNP users learned and forwarded on that service and associated SAPs are deleted.

**Examples**

- `-> unp profile unpl-static map service-type static tag-value 10 service-id 1`
- `-> unp profile unpl2-static map service-type static tag-value 20 service-id 2`
- `-> no unp profile unpl-static`

**Release History**

Release 8.3.1; command was introduced.
Release 8.8.R1; **ALL** and **outer_qtag:all** parameters added.
**Related Commands**

**unp system-default service-mod**

Specifies the modulo number that the switch will use to dynamically calculate an SPB Service Instance Identifier (I-SID) value or a VXLAN Network Identifier (VNID) value for a System Default profile. System Default profiles are dynamically created to accommodate device traffic received on UNP access ports that is not classified into a user-defined UNP service profile.

**unp system-default service-mod {mod_number | default}**

---

**Syntax Definitions**

- **mod_number**
  - The modulo number to use for calculating an SPB I-SID or VNID value.
  - The valid range is 1–4096.

- **default**
  - Sets the modulo number value back to the default value.

---

**Defaults**

By default, modulo 512 is used for the System Default profile calculation.

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>

<td>No</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- A System Default profile is defined to carry traffic for an SPB service or for a VXLAN service based on the dynamic service setting for the UNP access port on which the traffic is received (see the **unp dynamic-service** command). For example:
  - If the dynamic service value is set to SPB, then the System Default profile is dynamically created with attributes to define an SPB SAP.
  - If the dynamic service value is set to VXLAN, then the System Default profile is dynamically created with attributes to define a VXLAN SAP. A System Default profile for a VXLAN SAP is supported only on the OmniSwitch 6900-X72/Q32 and OmniSwitch 6900-V72/C32.

- One of the attributes defined for a System Default profile is an SPB I-SID or VXLAN VNID. This value is dynamically calculated using the base service number, modulo number, VLAN tag of the UNP port traffic, and the UNP port domain value. For example, if the base service number is 10000000, the modulo number is 512, the VLAN tag is 30, and the domain is 10, then the following calculation is used to determine the SPB I-SID or VXLAN VNID number:

  \[10000000 + (10 \times 10000) + (30 \mod 512) = 10100030\]

  Based on the above calculation, “10100030” is the resulting service instance value.
Once the SPB I-SID or VXLAN VNID number is determined, that number is used to derive the System Default profile name. For example:

- The name of an SPB System Default profile is “SystemDefaultISID”, where ISID is the calculated attribute value for the profile. For example, if the calculated I-SID number is 10100030, then the SPB profile “SystemDefault10100030” is created.

- The name of a VXLAN System Default profile is “SystemDefaultVNID”, where VNID is the calculated attribute value for the profile. For example, if the calculated VNID number is 10000100, then the VXLAN profile “SystemDefault10001000” is created.

When the modulo number value is changed, all users learned in System Default profiles are flushed (logged out of the network) and dynamic SAPs created for the profiles are cleared.

**Examples**

-> unp system-default service-mod 800  
-> unp system-default service-mod default

**Release History**

Release 8.5R1; command was introduced.

**Related Commands**

- **unp system-default service-base**: Specifies the base service number that the switch will use to dynamically calculate an SPB I-SID value or a VXLAN VNID value for a System Default profile.
- **unp system-default multicastmode**: Specifies the multicast replication mode configuration to use for dynamic services that are created for System Default profiles.
- **unp system-default vlan-translation**: Specifies the VLAN translation configuration to use for dynamic services that are created for System Default profiles.
- **unp system-default multicastgroup**: Specifies the multicast group IP address to use for dynamic VXLAN services that are created for System Default profiles.
- **unp system-default far-end-ip-list**: Specifies the name of a far-end IP list to associate with dynamic VXLAN services that are created for System Default profiles.
- **show unp global configuration**: Displays the configurable System Default profile values for the switch.
- **unp dynamic-service**: Configures whether the System Default service profile dynamically creates an SPB SAP or a VXLAN SAP based on the traffic received on the UNP access port.

**MIB Objects**

alaDaUNPGlobalConfiguration  
alaDaUNPServiceModule
unp system-default service-base

Specifies the base service number that the switch will use to dynamically calculate an SPB Service Instance Identifier (I-SID) value or a VXLAN Network Identifier (VNID) value for a System Default profile. System Default profiles are dynamically created to accommodate device traffic received on UNP access ports that is not classified into a user-defined UNP service profile.

```
unp system-default service-base {base_number | default}
```

**Syntax Definitions**

- **base_number**: The base service number to use for calculating an SPB I-SID or VNID value. The valid range is 1–1000000.
- **default**: Sets the base service number value back to the default value.

**Defaults**

By default, base service number 10,000,000 is used for the System Default profile calculation.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>

</tbody>
</table>

**Usage Guidelines**

- A System Default profile is defined to carry traffic for an SPB service or for a VXLAN service based on the dynamic service setting for the UNP access port on which the traffic is received (see the `unp dynamic-service` command). For example:
  - If the dynamic service value is set to SPB, then the System Default profile is dynamically created with attributes to define an SPB SAP.
  - If the dynamic service value is set to VXLAN, then the System Default profile is dynamically created with attributes to define a VXLAN SAP. A System Default profile for a VXLAN SAP is supported only on the OmniSwitch 6900-X72/Q32 and OmniSwitch 6900-V72/C32.
- One of the attributes defined for a System Default profile is an SPB I-SID or VXLAN VNID. This value is dynamically calculated using the base service number, modulo number, VLAN tag of the UNP port traffic, and the UNP port domain value. For example, if the base service number is 10,000,000, the modulo number is 512, the VLAN tag is 30, and the domain is 10, then the following calculation is used to determine the SPB I-SID or VXLAN VNID number:

  \[
  10,000,000 + (10 * 10,000) + (30 \% 512) = 10,100,030
  \]

  Based on the above calculation, “10,100,030” is the resulting service instance value.
Once the SPB I-SID or VXLAN VNID number is determined, that number is used to derive the System Default profile name. For example:

- The name of an SPB System Default profile is “SystemDefaultISID”, where ISID is the calculated attribute value for the profile. For example, if the calculated I-SID number is “10,100,030”, then the SPB profile “SystemDefault10100030” is created.

- The name of a VXLAN System Default profile is “SystemDefaultVNID”, where VNID is the calculated attribute value for the profile. For example, if the calculated VNID number is “10,001,000”, then the VXLAN profile “SystemDefault10001000” is created.

When the base service number value is changed, subsequent System Default profiles are created with the new value while profiles created with the previous base value are retained.

**Examples**

```
-> unp system-default service-base 5000
-> unp system-default service-base default
```

**Release History**

Release 8.5R1; command was introduced.

**Related Commands**

- `unp system-default service-base-mod` Specifies the modulo number that the switch will use to dynamically calculate an SPB I-SID value or a VXLAN VNID value for a System Default profile.

- `unp system-default multicastmode` Specifies the multicast replication mode configuration to use for dynamic services that are created for System Default profiles.

- `unp system-default vlan-translation` Specifies the VLAN translation configuration to use for dynamic services that are created for System Default profiles.

- `unp system-default multicastgroup` Specifies the multicast group IP address to use for dynamic VXLAN services that are created for System Default profiles.

- `unp system-default far-end-ip-list` Specifies the name of a far-end IP list to associate with dynamic VXLAN services that are created for System Default profiles.

- `show unp global configuration` Displays the configurable System Default profile values for the switch.

- `unp dynamic-service` Configures whether the System Default service profile dynamically creates an SPB SAP or a VXLAN SAP based on the traffic received on the UNP access port.

**MIB Objects**

- `alaDaUNPGlobalConfiguration` alaDaUNPServiceBase
unp system-default multicastmode

Specifies the multicast replication mode configuration to use for dynamic services that are created for System Default profiles.

unp system-default multicastmode {tandem | headend | hybrid}

Syntax Definitions

tandem
Specifies the tandem replication mode for services dynamically created for System Default profiles.

headend
Specifies the head-end replication mode for services dynamically created for System Default profiles.

hybrid
Specifies the hybrid replication mode for services dynamically created for System Default profiles.

Defaults

By default, System Default profile services are configured to use the head-end mode.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- The multicast mode selection specified with this command is a global setting that is applied to all of the dynamic services that are created for System Default profiles.

- The following multicast modes are supported for an SPB service:
  - **Tandem**: In this mode, a non-unicast packet received on an SPB access port is replicated once at each node using the multicast group address.
  - **Headend**: In this mode, a non-unicast packet received on an SPB access port is replicated once for each receiver in the provider backbone bridge (PBB) network using its unicast base MAC (BMAC) address.

- The following multicast modes are supported for a VXLAN service:
  - **Tandem**: In this mode, PIM multicast routing is required to discover the neighbor nodes and assign membership to VTEP nodes that desire to be in the same multicast group. This also requires the manual configuration of a multicast SDP object to tunnel traffic to the other VTEP nodes that belong to the same multicast group.
  - **Headend**: In this mode, unicast SDP objects are manually configured to tunnel traffic to the far-end nodes. In this case, PIM multicast routing is not required. Any BUM traffic is replicated and one copy is sent to each VTEP node as specified by the unicast SDP object.
- **Hybrid**: In this mode, traffic is tunneled from this service instance to both a group of VTEPs that belong to the same multicast group address and to the VTEP nodes that are not associated with the same multicast group address.

- A System Default profile for a dynamic VXLAN service is supported only on the OmniSwitch 6900-X72/Q32 and OmniSwitch 6900-V72/C32.

**Examples**

- `unp system-default multicastmode tandem`
- `unp system-default multicastmode headend`
- `unp system-default multicastmode hybrid`

**Release History**

Release 8.5R1; command was introduced.
Release 8.6R2; **hybrid** parameter added.

**MIB Objects**

- `alaDaUNPGlobalConfiguration`  
  - `alaDaUNPServiceMulticastMode`
**unp system-default vlan-xlation**

Specifies the VLAN translation configuration to use for dynamic services that are created for System Default profiles.

`unp system-default vlan-translation {enable | disable}

### Syntax Definitions

<table>
<thead>
<tr>
<th>enable</th>
<th>Enables egress translation of VLAN tags.</th>
</tr>
</thead>
<tbody>
<tr>
<td>disable</td>
<td>Disables egress translation of VLAN tags.</td>
</tr>
</tbody>
</table>

### Defaults

By default, VLAN translation is enabled for System Default profile services.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- The VLAN translation status specified with this command is a global setting that is applied to all of the dynamic services that are created for System Default profiles.

- When VLAN translation is enabled for a service, the VLAN tags for outgoing frames on SAPs associated with that service are processed according to the local SAP configuration (the SAP on which the frames will egress) and not according to the configuration of the SAP on which the frames were received.

- When VLAN translation is disabled, frames simply egress without any modification of the VLAN tags. In other words, the frames are transparently bridged without tag modification.

- A System Default profile for a dynamic VXLAN service is supported only on the OmniSwitch 6900-X72/Q32 and OmniSwitch 6900-V72/C32.

### Examples

- `-> unp system-default vlan-xlation disable`
- `-> unp system-default vlan-xlation enable`

### Release History

Release 8.5R1; command was introduced.
**Related Commands**

- **unp system-default multicastmode**
  Specifies the multicast replication mode configuration to use for dynamic services that are created for System Default profiles.

- **unp system-default multicastgroup**
  Specifies the multicast group IP address to use for dynamic VXLAN services that are created for System Default profiles.

- **unp system-default far-end-ip-list**
  Specifies the name of a far-end IP list to associate with dynamic VXLAN services that are created for System Default profiles.

- **show unp global configuration**
  Displays the configurable System Default profile values for the switch.

- **show unp profile map**

**MIB Objects**

- alaDaUNPGlobalConfiguration
- alaDaUNPServiceVlanXlation
**unp system-default multicastgroup**

Specifies a multicast group IP address to associate with dynamic VXLAN services that are created for System Default profiles.

```
unp system-default multicastgroup {mc_group_address | default}
```

**Syntax Definitions**

- `mc_group_address` The multicast IP address of the group to which this service will join.
- `default` Sets the multicast group IP address back to the default value (239.0.0.0).

**Defaults**

By default, a VXLAN service associated with a System Default profile will join the 239.0.0.0 multicast group.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>X72/Q32</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>X72/Q32</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- The multicast group IP address specified with this command is a global setting that is applied to all of the dynamic VXLAN services that are created for System Default profiles.

- When a dynamic VXLAN service is created for a System Default profile, the specified multicast group IP address is used to build a VXLAN Service Distribution Point (SDP) tunnel for the VXLAN service traffic. VXLAN nodes that subscribe to the same multicast group will receive traffic through the associated SDP tunnel from all the other VXLAN nodes that belong to the same multicast group.

**Examples**

- `unp system-default multicastgroup 225.1.1.2`
- `unp system-default multicastgroup 239.0.0.0`
- `unp system-default multicastgroup default`

**Release History**

Release 8.5R1; command was introduced.
Related Commands

- `unp system-default multicastmode` Specifies the multicast replication mode configuration to use for dynamic services that are created for System Default profiles.
- `unp system-default vlan-translation` Specifies the VLAN translation configuration to use for dynamic services that are created for System Default profiles.
- `unp system-default far-end-ip-list` Specifies the name of a far-end IP list to associate with dynamic VXLAN services that are created for System Default profiles.
- `show unp global configuration` Displays the configurable System Default profile values for the switch.
- `show unp profile map` Displays the VLAN or service mapping configuration for the profile.

MIB Objects

`alaDaUNPGlobalConfiguration`  
`alaDaUNPServiceMulticastGroup`
unp system-default far-end-ip-list

Specifies the name of a far-end IP list to associate with dynamic VXLAN services that are created for System Default profiles. The list contains IP addresses assigned to the Loopback0 interfaces of far-end VXLAN nodes. This allows multiple far-end nodes to be associated with the dynamic service created for the VXLAN Network ID (VNID) specified in a VXLAN System Default profile.

`unp system-default far-end-ip-list {ip_list_name | default}`

**Syntax Definitions**

- **ip_list_name**
  - The name of the list that contains the IP addresses for the far-end VXLAN Tunnel End Point (VTEP) nodes. The valid range is 1–32 characters.

- **default**
  - Sets the far-end list name to the default value (no list name is specified).

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>X72/Q32</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- The far-end IP list name specified with this command is a global setting that is applied to all of the dynamic VXLAN services that are created for System Default profiles.

- When a dynamic VXLAN service is created for a System Default profile, the specified IP address list name is used to build VXLAN Service Distribution Point (SDP) tunnels between the VXLAN nodes. Traffic associated with the dynamic VXLAN service is encapsulated and sent through an SDP tunnel to the destined far-end node.

**Examples**

- `-> unp system-default far-end-ip-list vtep-list1`
- `-> unp system-default far-end-ip-list default`

**Release History**

Release 8.5R1; command was introduced.
Release 8.6R2; **default** parameter added.
**Related Commands**

- `unp system-default multicastmode` Specifies the multicast replication mode configuration to use for dynamic services that are created for System Default profiles.
- `unp system-default vlan-translation` Specifies the VLAN translation configuration to use for dynamic services that are created for System Default profiles.
- `unp system-default multicastgroup` Specifies the multicast group IP address to use for dynamic VXLAN services that are created for System Default profiles.
- `show unp global configuration` Displays the configurable System Default profile values for the switch.
- `show unp profile map` Displays the VLAN or service mapping configuration for the profile.

**MIB Objects**

- `alaDaUNPGlobalConfiguration` alaDaUNPServiceFarEndIpList
**unp saa-profile**

Configures a Service Assurance Agent (SAA) performance monitoring profile. This type of profile is assigned to UNP profiles to specify jitter and latency threshold values for SAA sessions that apply to the assigned UNP profile.

```
unp saa-profile profile_name [jitter-threshold jitter_thresh] [latency-threshold latency_thresh]
```

```
no unp saa-profile profile_name
```

**Syntax Definitions**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>profile_name</td>
<td>The name to assign to the SAA profile.</td>
</tr>
<tr>
<td>jitter_thresh</td>
<td>The jitter threshold value, in microseconds. A trap is generated when this value is crossed. The valid range is 0–1000000.</td>
</tr>
<tr>
<td>latency_thresh</td>
<td>The latency threshold value, in microseconds. A trap is generated when this value is crossed. The valid range is 0–1000000.</td>
</tr>
</tbody>
</table>

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>jitter_thresh</td>
<td>0 (disabled)</td>
</tr>
<tr>
<td>latency_thresh</td>
<td>0 (disabled)</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>No</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove the SAA profile from the switch configuration.
- Although SAA profiles can be configured and assigned to a UNP through the CLI, these profiles are mainly used by the OmniVista network management application to trigger SAA sessions that monitor connections between virtual machines (VMs) in a data center network.
- Assigning SAA profiles is supported only with UNP profiles that are assigned to UNP bridge ports. UNP access ports do not support this functionality.

**Examples**

- `-> unp saa-profile unp_saa1 jitter-threshold 100 latency-threshold 500`
- `-> unp saa-profile unp_saa2 jitter-threshold 150`
- `-> unp saa-profile unp_saa3 latency-threshold 250`
**Release History**

Release 7.3.2; command was introduced.

**Related Commands**

- `unp profile saa-profile` Assigns an SAA profile to the specified UNP profile.
- `show unp saa-profile` Displays the SAA profile configuration for the switch.
- `show unp profile` Displays the profile configuration for the switch.

**MIB Objects**

alaDaSaaProfileTable
  alaDaSaaProfileName
  alaDaSaaProfileLatencyThreshold
  alaDaSaaProfileJitterThreshold
**unp port-type**

Configures UNP functionality for the specified port or link aggregate. This includes configuring the UNP port type (bridge or access). Traffic received on a UNP bridge port is classified using VLAN profiles and port attributes. Traffic received on a UNP access port is classified using service profiles and port attributes.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id1[-agg_id2]} port-type {access | bridge}
```

```
no unp {port chassis/slot/port1[-port2] | linkagg agg_id1[-agg_id2]}
```

---

**Syntax Definitions**

- **chassis**: The chassis identifier.
- **slot/port1[-port]**: The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
- **agg_id1[-agg_id2]**: The link aggregate ID number. Use a hyphen to specify a range of link aggregate ID numbers (5-10).
- **access**: Configures the specified port or link aggregate as a service access port. This port type is used for classifying traffic into service-based profiles. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560 or OmniSwitch 6570M.*
- **bridge**: Configures the specified port or link aggregate as a standard bridge port. This port type is used for classifying traffic into VLAN-based profiles.

---

**Defaults**

By default, UNP is disabled on all ports and link aggregates.

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

---

**Usage Guidelines**

- Use the **no** form of this command to remove the UNP configuration from a port or link aggregate.
- Any configuration change to a UNP-enabled port will flush all MAC addresses learned on that port. This applies only to CLI commands used to configure UNP port parameters.
- Only one UNP port type is configurable for a specific port or link aggregate. To change the port type of an existing UNP port, remove the current UNP configuration first using the **no unp port** or **no unp linkagg** command then use the **unp port-type** command to set the new port type.
- There is no limit to the number of switch ports that can have UNP enabled.
Enabling UNP is not supported on the following switch ports:
- 802.1q-tagged ports.
- MVRP ports.
- Port Mirroring destination ports (MTP).
- Port Mapping network ports.
- STP and ERP ports.
- Ports on which a static MAC address is configured.
- Ports on which dynamic Source Learning is disabled.
- VLAN Stacking (Ethernet Services NNI or UNI) ports.
- Service Manager access and network ports.
- Ethernet OAM ports.

UNP and Learned Port Security (LPS) are supported on the same port with the following conditions:
- LPS is not supported on link aggregates.
- The LPS learning window is set globally but not on a per-port basis. So the window applies to all UNP ports.
- When LPS is enabled or disabled on a UNP bridge port (LPS is not supported on UNP access ports), MAC addresses already learned on that port are flushed.
- Configuring a static MAC address is not allowed on a UNP port unless LPS is also enabled on the same port.
- When both LPS and UNP are enabled on the same port, UNP first authenticates and classifies any MAC addresses received, then LPS rules are applied. If a MAC address violates any of the LPS rules for the port, the address may get filtered or the port violated even if UNP initially determined the address was valid. In other words, LPS rules take precedence over UNP to determine if a MAC address is bridged or filtered on the port.
- If UNP classifies a MAC address as learning but LPS learns the address as filtering, an untagged packet will show as filtering in the default VLAN for the port and a tagged packet MAC will show as filtering in the specific tagged VLAN.
- When a MAC address is filtered by LPS, the show unp user command will display “LPS-Blocked” as the classification source for that MAC address.

UNP ports support both tagged and untagged packets. If the VLAN ID of a tagged packet matches the VLAN associated with a UNP into which the packet was classified, the packet is learned as forwarding and a tagged VLAN-port association is created. However, if the VLAN ID tag does not match the VLAN ID associated with the profile, the packet is filtered.

UNP bridge and access ports support single-tagged and double-tagged packets with the following conditions:
- Double-tagged packets are treated the same as single-tagged packets in that UNP will only use the outer VLAN tag to determine how the packet is processed on the UNP bridge port.
- UNP access ports use the inner VLAN tag of double-tagged packets received on the port to determine the service access port (SAP) to use or create for forwarding the traffic on the network backbone.
Access Guardian Commands

**Examples**

- unp port 1/1 port-type access
- unp port 1/1-3 port-type bridge
- unp port 1/10 port-type access
- no unp port 1/10
- unp linkagg 5 port-type access
- unp linkagg 8 port-type bridge
- unp linkagg 2 port-type access
- no unp linkagg 2

**Release History**

Release 8.3.1; command was introduced.

**Related Commands**

- **unp admin-state**  
  Configures the administrative status of the UNP configuration for the specified port or link aggregate.

- **unp profile**  
  Configures a UNP profile that is used to classify traffic received on UNP ports.

- **show unp port**  
  Displays the UNP configuration for the port.

**MIB Objects**

- alaDaUNPPortTable
- alaDaUNPPortIfIndex
- alaDaUNPPortType
**unp l2-profile**

Assigns an existing Layer 2 profile to the specified UNP access port. This profile determines how Layer 2 protocol frames received on the access port are processed.

```
unp {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} l2-profile l2profile_name
no unp {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} l2-profile
```

**Syntax Definitions**

- **chassis**
  - The chassis identifier.

- **slot/port[-port2]**
  - The chassis number and the slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).

- **agg_id[-agg_id2]**
  - The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).

- **l2profile_name**
  - The name of an existing Layer 2 profile.

**Defaults**

By default, the Layer 2 profile “unp-def-access-profile” is assigned when a port is configured as a UNP access port.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove the Layer 2 profile configuration from the UNP port.

- Specify only ports or link aggregates that are configured as UNP access ports. This command does not apply to UNP bridge ports.

- Specify a Layer 2 profile name that already exists in the switch configuration. Layer 2 profiles are created using the **service l2profile** command.

**Examples**

- `-> unp port 1/1/3 l2-profile sap_1_profile`
- `-> unp linkagg 10 l2-profile sap_1_profile`
- `-> unp port 1/1/3 l2-profile unp-def-access-profile`
- `-> unp linkagg 10 l2-profile unp-def-access-profile`
- `-> no unp port 1/1/3 l2-profile`
- `-> no unp linkagg 10 l2-profile`
**Release History**

Release 8.4.1; command was introduced.

**Related Commands**

- `unp port-type` Configures UNP functionality on a port or link aggregate.
- `service l2profile` Configures a Layer 2 profile that is used to specify how to process Layer 2 control frames ingressing on the access port.
- `show service l2profile` Displays the Layer 2 profile configuration information for the bridge.
- `show unp port config` Displays the UNP configuration for the port.

**MIB Objects**

- `alaDaUNPPortTable`
  - `alaDaUNPPortIfIndex`
  - `alaDaUNPPortL2Profile`
unp redirect port-bounce

Enables or disables the port bounce action on the specified UNP bridge port or globally on all UNP bridge ports. When enabled, a port bounce is triggered upon receipt of a RADIUS Change of Authorization (COA) or a Disconnect request (DM) message from a redirection server to enforce a user role or terminate a user session.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} redirect port-bounce
```

```
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} redirect port-bounce
```

```
unp redirect port-bounce {enable | disable}
```

**Syntax Definitions**

- `chassis/slot/port1[-port2]`: The chassis ID, slot, and port number (3/1/1) for a specific UNP bridge port. Use a hyphen to specify a range of ports (3/1/1-8).
- `agg_id[-agg_id2]`: The link aggregate ID number for a specific UNP bridge link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).
- `enable`: Globally enables the port bounce function for all UNP bridge ports.
- `disable`: Globally disables the port bounce function for all UNP bridge ports.

**Defaults**

By default, port bounce is disabled on all UNP bridge ports.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `port` or `linkagg` parameter to enable port bounce for a specific UNP bridge port or link aggregate. Use the `no` form of this command to disable port bounce for a specific UNP bridge port or link aggregate. Note that port bounce is not supported on UNP access ports.
- Use the `enable` or `disable` parameters to globally enable or disable the port bounce status for all UNP bridge ports or link aggregates on the entire switch.
- The port bounce action only applies to a MAC authenticated non-suppliant (non-802.1X device). If the device is a supplicant (802.1X device), then an EAP-Fail frame is sent instead. In both cases, re-authentication is triggered for both types of devices.
The port-level setting of the port bounce action overrides the global setting for the switch. The following table indicates when a port is toggled based on the status of port bounce at the global and port level:

<table>
<thead>
<tr>
<th>Global Port Bounce</th>
<th>Per-Port Bounce</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enabled</td>
<td>Disabled</td>
<td>Port is not toggled</td>
</tr>
<tr>
<td>Enabled</td>
<td>Enabled</td>
<td>Port is toggled</td>
</tr>
<tr>
<td>Disabled</td>
<td>Enabled</td>
<td>Port is toggled</td>
</tr>
<tr>
<td>Disabled</td>
<td>Disabled</td>
<td>Port is not toggled</td>
</tr>
</tbody>
</table>

This command is used when configuring the switch to interact with the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) as part of the OmniSwitch Bring Your Own Devices (BYOD) solution.

**Examples**

Port-level configuration example:

```
-> unp port 1/1/6 redirect port-bounce
-> no unp port 1/1/6 redirect port-bounce
```

Global configuration example:

```
-> unp redirect port-bounce enable
-> unp redirect port-bounce disable
```

**Release History**

Release 8.1.1; command was introduced.
Release 8.3.1; no form of this command added for specific port or link aggregate configuration.

**Related Commands**

- `unp port-type` Configures UNP functionality on a port or link aggregate.
- `unp redirect pause-timer` Configures the global pause timer value for the switch
- `unp redirect proxy-server-port` Configures the HTTP proxy port number to use for redirection.
- `unp redirect server` Configures an IP network address to allow HTTP traffic redirection.
- `unp redirect allowed-name` Configures a list of additional IP addresses to which a host can access.
- `show unp port` Displays the UNP configuration for the port.
- `show unp global configuration` Displays the profile designated as the authentication server down UNP for the switch.

**MIB Objects**

- `alaDaUNPPortTable`  
  - `alaDaUNPPortIfIndex`  
  - `alaDaUNPPortRedirectPortBounce`  
- `alaDaUNPGlobalConfiguration`  
  - `alaDaUNPRedirectPortBounce`
**unp 802.1x-authentication**

Configures the status of 802.1X authentication for the specified UNP port. Enable this functionality to invoke 802.1X-based authentication for devices connected to the UNP port.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication
```

### Syntax Definitions

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>chassis</code></td>
<td>The chassis identifier.</td>
</tr>
<tr>
<td><code>slot/port[-port2]</code></td>
<td>The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).</td>
</tr>
<tr>
<td><code>agg_id[-agg_id2]</code></td>
<td>Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).</td>
</tr>
</tbody>
</table>

### Defaults

By default, 802.1X authentication is enabled on UNP ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the **no** form of this command to disable 802.1X authentication on a UNP port or link aggregate.
- This command is only allowed on UNP-enabled ports and link aggregates.
- If a range of ports or link aggregates is specified with this command, any non-UNP ports or aggregates within the range are skipped.
- An option exists to classify a device into an alternate UNP in the event successful 802.1X authentication does not return a UNP name. See the **unp 802.1x-authentication pass-alternate** command.
- If UNP MAC authentication, 802.1X authentication, and classification (see **unp classification** and **unp mac-authentication**) are disabled on the UNP port, all MAC addresses received on that port are blocked unless a default UNP is configured.
- Configuring an authentication server down UNP (see **unp auth-server-down**) is highly recommended when MAC or 802.1X authentication is enabled on VLAN bridge or SPB access ports or aggregates. This is because after a switch reload, traffic from devices connected to these types of ports and
aggregates reaches the switch and triggers the authentication process before route convergence has completed and the server can be reached.

- If an authentication server down UNP is configured, devices are temporarily learned in that profile and authentication is automatically attempted again after the timeout period expires. This allows time for the server to become reachable from the switch after a reload.
- If an authentication server down UNP is not configured, devices are learned as filtering and will remain in that state. There is no further attempt to authenticate these devices again.
- The authentication server down functionality is not supported on VXLAN access ports or aggregates.

**Examples**

- `unp port 1/1/5 802.1x-authentication`
- `no unp port 1/1/5 802.1x-authentication`

- `unp port 1/1/10-15 802.1x-authentication`
- `no unp port 1/1/10-15 802.1x-authentication`

- `unp linkagg 10 802.1x-authentication`
- `no unp linkagg 10 802.1x-authentication`

- `unp linkagg 10-50 802.1x-authentication`
- `no unp linkagg 10-50 802.1x-authentication`

**Release History**

Release 7.3.4; command was introduced.

**Related Commands**

- `unp port-type` Configures UNP functionality on a port or link aggregate.
- `unp 802.1x-authentication` Assigns the device to another profile when successful 802.1X authentication does not return a UNP name.
- `pass-alternate` Configures the MAC authentication status for the UNP port.
- `unp classification` Configures the classification status for the UNP port.
- `unp auth-server-down` Configures an authentication server down UNP for the switch.
- `show unp port` Displays the UNP configuration for the port.

**MIB Objects**

- `alaDaUNPPortTable` 
  - `alaDaUNPPortIfIndex` 
  - `alaDaUNPPort8021XAuthStatus`
unp 802.1x-authentication pass-alternate

Configures the name of an existing UNP to use as an alternate profile. A device is assigned to the alternate profile when successful 802.1X authentication does not return the name of a profile.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication pass-alternate profile_name

no unp {port chassis/slot/port1[-port2] | linkagg agg_id} 802.1X-authentication pass-alternate
```

**Syntax Definitions**

- `chassis` The chassis identifier.
- `slot/port[-port2]` The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
- `agg_id[-agg_id2]` Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
- `profile_name` The name of an existing VLAN, SPB, or VXLAN profile.

**Defaults**

By default, no alternate UNP is configured.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove the alternate profile from the UNP port configuration.
- This command is only allowed on UNP-enabled ports and link aggregates.
- If a range of ports or link aggregates is specified with this command, any non-UNP ports or aggregates within the range are skipped.
- The profile name specified with this command must already exist in the switch configuration.

**Examples**

- `unp port 1/1/1 802.1x-authentication pass-alternate Finance`
- `unp port 1/1/1-3 802.1x-authentication pass-alternate CustomerA`
- `no unp port 1/1/1-3 802.1x-authentication pass-alternate`
- `unp linkagg 5 802.1x-authentication pass-alternate AltUNP`
- `unp linkagg 10-15 802.1x-authentication pass-alternate CustomerB`
-> no linkagg 5 mac-authentication pass-alternate

**Release History**

Release 7.3.4; command was introduced.
Release 8.3.1; **vlan-profile**, **spb-profile**, and **vxlans-profile** parameters deprecated.

**Related Commands**

- **unp profile**
  Configures a UNP profile that is used to classify traffic received on UNP ports.

- **unp port-type**
  Configures UNP functionality on a port or link aggregate.

- **unp 802.1x-authentication**
  Configures the 802.1X authentication status for the UNP port.

- **show unp port**
  Displays the UNP port parameter configuration.

**MIB Objects**

- **alaDaUNPPortTable**
  - **alaDaUNPPortIfIndex**
  - **alaDaUNPPort8021XPassAltProfileName**
unp 802.1x-authentication tx-period

Configures the 802.1X authentication re-transmission time interval for the specified UNP port.

`unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication tx-period seconds`

`no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication tx-period`

**Syntax Definitions**

- **chassis**: The chassis identifier.
- **slot/port[-port2]**: The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
- **agg_id[-agg_id2]**: Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
- **seconds**: The amount of time before an EAP Request Identity is retransmitted. The valid range is 1–60 seconds.

**Defaults**

By default, the retransmission period is set to 30 seconds.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to set the re-transmission time interval back to the default value of 30 seconds.
- The re-transmission time period only applies to UNP ports on which 802.1X authentication is enabled.
- If a range of ports is specified with this command, any non-UNP ports within the range are skipped.

**Examples**

- `unp port 1/1/5 802.1x-authentication tx-period 60`
- `no unp port 1/1/6-10 802.1x-authentication tx-period 20`
- `unp linkagg 10 802.1x-authentication tx-period 60`
- `no unp linkagg 20-25 802.1x-authentication tx-period`
Release History

Release 7.3.4; command was introduced.

Related Commands

- `unp port-type` Configures UNP functionality on a port or link aggregate.

- `alaDaUNPPort8021XTxPeriod` Displays the UNP configuration for the port.
**unp 802.1x-authentication supp-timeout**

Configures the 802.1X authentication supplicant timeout for the specified UNP port. This value is the amount of time the switch will wait before timing out an 802.1X user that is attempting to authenticate.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication supp-timeout seconds
```

```
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication supp-timeout
```

**Syntax Definitions**

- `chassis` The chassis identifier.
- `slot/port1[-port2]` The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
- `agg_id[-agg_id2]` Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15)
- `seconds` The timeout value. The valid range is 1–120 seconds.

**Defaults**

By default, the supplicant timeout value is set to 30 seconds.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>

<tr>
<td>9900</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to set the supplicant timeout back to the default value of 30 seconds.
- Increase the supplicant timeout value if the authentication process requires additional steps by the user (for example, entering a challenge).
- The supplicant timeout is applied only to 802.1X users connected to a UNP port on which 802.1X authentication is enabled.
- If a range of ports is specified with this command, any non-UNP ports within the range are skipped.

**Examples**

```
-> unp port 1/1/5 802.1x-authentication supp-timeout 10
-> unp port 1/1/10-15 802.1x-authentication supp-timeout 60
-> no unp port 1/1/5 802.1x-authentication supp-timeout
```
-> unp linkagg 10 802.1x-authentication supp-timeout 40
-> unp linkagg 2-5 802.1x-authentication supp-timeout 40
-> no unp linkagg 10 802.1x-authentication supp-timeout

**Release History**

Release 7.3.4; command was introduced.

**Related Commands**

- **unp port-type**: Configures UNP functionality on a port or link aggregate.
- **unp 802.1x-authentication**: Configures the 802.1X authentication status for the UNP port.
- **show unp port**: Displays the UNP configuration for the port.

**MIB Objects**

- **alaDaUNPPortTable**
  - **alaDaUNPPort8021XSuppTimeOut**
**unp 802.1x-authentication max-req**

Configures the maximum number of times the switch will retransmit a request for authentication information (request identity, password, challenge) to an 802.1X user on the specified UNP port.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication max-req max_req
```

```
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication max-req
```

**Syntax Definitions**

- **chassis**
  - The chassis identifier.

- **slot/port[-port2]**
  - The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).

- **agg_id[-agg_id2]**
  - Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).

- **max_req**
  - The maximum number of times information requests are retransmitted. The valid range is 1–3.

**Defaults**

By default, the maximum number of requests is set to two.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Model</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900V72/C32</th>
<th>6900X48C6/T48C6</th>
<th>X48C6E/V48C8/C32E/T24C2</th>
<th>9900</th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to set the maximum number of times information requests are retransmitted back to the default value of two.

- The 802.1X requests are transmitted, up to the maximum number allowed, until the authentication session is shut down based on the supplicant timeout value configured for the 802.1X port.

- The maximum number of requests is applied only to 802.1X users connected to a UNP port on which 802.1X authentication is enabled.

- If a range of ports or link aggregates is specified with this command, any non-UNP ports within the range are skipped.

**Examples**

```
-> unp port 1/1/5 802.1x-authentication max-req 10
```
-> unp port 1/1/10-15 802.1x-authentication max-req 5
-> no unp port 1/1/5 802.1x-authentication max-req
-> unp linkagg 10 802.1x-authentication max-req 10
-> unp linkagg 2-5 802.1x-authentication max-req 5
-> no unp linkagg 10 802.1x-authentication max-req

Release History
Release 7.3.4; command was introduced.

Related Commands

unp 802.1x-authentication supp-timeout
Configures the number of seconds before the switch will time out an 802.1X user that is attempting to authenticate.

Displays the UNP configuration for the port.

MIB Objects
alaDaUNPPortTable

alaDaUNPPort8021XMaxReq
**unp 802.1x-authentication bypass-8021x**

Configures whether the 802.1X authentication process is bypassed on the specified UNP port. When enabled, the 802.1X device authentication process is skipped; only MAC authentication or rule-based classification is applied to device traffic on the UNP port.

```
unp {port chassis/slot/port1 [-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication bypass-8021x
```

```
no unp {port chassis/slot/port1 [-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication bypass-8021x
```

**Syntax Definitions**

- **chassis**
  - The chassis identifier.

- **slot/port[-port2]**
  - The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).

- **agg_id[-agg_id2]**
  - Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).

**Defaults**

By default, 801.1X authentication bypass is disabled on the UNP port; 802.1X authentication is attempted first.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- This command is only allowed on UNP-enabled ports and link aggregates.
- Enabling 802.1X authentication bypass is not allowed on UNP ports that are configured with an 802.1X authentication failure policy.

**Examples**

```
-> unp port 1/1/5 802.1x-authentication bypass-8021x
-> no unp port 1/1/5 802.1x-authentication bypass-8021x
-> unp port 1/1/10-15 802.1x-authentication bypass-8021x
-> no unp port 1/1/10-15 802.1x-authentication bypass-8021x
```

```
-> unp linkagg 10 802.1x-authentication bypass-8021x
-> no unp linkagg 10 802.1x-authentication bypass-8021x
-> unp linkagg 2-5 802.1x-authentication bypass-8021x
-> no unp linkagg 2-5 802.1x-authentication bypass-8021x
```
**Release History**

</tbody>
</table>
**unp 802.1x-authentication failure-policy**

Configures whether the switch attempts subsequent MAC authentication for a device after the initial 802.1X authentication process fails.

**Syntax**

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication failure-policy {mac}
```

```
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication failure-policy
```

**Syntax Definitions**

- `chassis`: The chassis identifier.
- `slot/port[-port2]`: The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
- `agg_id[-agg_id2]`: Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
- `mac`: Perform MAC authentication if 802.1X authentication fails.

**Defaults**

By default, device classification is performed after the initial 802.1X authentication process fails.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Configuring the 802.1X authentication failure policy is not allowed on UNP ports on which 802.1X authentication bypass is enabled.

- Device classification (the default) is performed based on the classification options configured for the UNP port.

**Examples**

```
-> unp port 1/1/5 802.1x-authentication failure-policy mac
-> no unp port 1/1/10-15 802.1x-authentication failure-policy
```

```
-> unp linkagg 10 802.1x-authentication failure-policy mac
-> no unp linkagg 2-5 802.1x-authentication failure-policy
```
**Release History**

alaDaUNPPortTable
- alaDaUNPPort8021XFailurePolicy
**unp mac-authentication**

Configures the status of MAC authentication for the specified UNP port. Enable this functionality to invoke MAC-based authentication for devices connected to the UNP port.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} mac-authentication
```

```
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} mac-authentication
```

**Syntax Definitions**

- `chassis` The chassis identifier.
- `slot/port[-port2]` The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
- `agg_id[-agg_id2]` The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).

**Defaults**

By default, MAC authentication is enabled.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to disable MAC authentication on a UNP port or link aggregate.
- This command is only allowed on UNP-enabled ports (both bridge and access port types).
- MAC-based authentication is supported only through a RADIUS server.
- An option exists to classify a device into an alternate UNP in the event successful MAC authentication does not return a UNP name.
- If MAC authentication fails, any classification rules configured for the UNP port are applied.
- If UNP MAC authentication, 802.1X authentication, and classification (see `unp classification` and `unp 802.1x-authentication`) are disabled on the UNP port, all MAC addresses received on that port are blocked unless a default UNP is configured and/or trust VLAN tag is enabled for the port.
- Configuring an authentication server down UNP (see `unp auth-server-down`) is highly recommended when MAC or 802.1X authentication is enabled on VLAN bridge or SPB access ports or aggregates. This is because after a switch reload, traffic from devices connected to these types of ports and
aggregates reaches the switch and triggers the authentication process before route convergence has
completed and the server can be reached.

– If an authentication server down UNP is configured, devices are temporarily learned in that profile
and authentication is automatically attempted again after the timeout period expires. This allows
time for the server to become reachable from the switch after a reload.

– If an authentication server down UNP is not configured, devices are learned as filtering and will
remain in that state. There is no further attempt to authenticate these devices again.

– The authentication server down functionality is not supported on VXLAN access ports or
aggregates.

Examples

-> unp port 1/1 mac-authentication
-> no unp port 1/1 mac-authentication
-> unp linkagg 2 mac-authentication
-> no unp linkagg 2 mac-authentication

Release History

Release 7.2.1; command was introduced.
Release 7.2.1.R02; linkagg parameter added.

Related Commands

unp port-type Configures UNP functionality on a port or link aggregate.
unp mac-authentication pass-
alternate Assigns the device to another VLAN-based or service-based UNP when successful MAC authentication does not return a UNP name.
unp classification Configures the classification status for the UNP port.
show unp port Displays the UNP configuration for the port.

MIB Objects

alaDaUNPPortTable
alaDaUNPPortIfIndex
alaDaUNPPortMacAuthFlag
**unp mac-authentication pass-alternate**

Configures the name of an existing VLAN-based or service-based UNP to use as an alternate profile. A device is assigned to the alternate profile when successful MAC authentication does not return a UNP name.

`unp {port chassis/slot/port1[{-port2}] | linkagg agg_id[-agg_id2]} mac-authentication pass-alternate profile_name`

`no unp {port chassis/slot/port1[{-port2}] | linkagg agg_id[-agg_id2]} mac-authentication pass-alternate`

### Syntax Definitions

- **chassis**
  The chassis identifier.

- **slot/port[{-port2}]**
  The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).

- **agg_id[-agg_id2]**
  The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).

- **profile_name**
  The name of an existing VLAN, SPB, or VXLAN profile.

### Defaults

By default, no alternate UNP is configured.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the **no** form of this command to remove the alternate profile from the UNP port configuration.

- Service-based profiles classify traffic received on UNP access ports; VLAN-based profiles classify traffic received on UNP bridge ports. Make sure the specified port is of the correct type for the specified profile.

- The UNP name specified with this command must already exist in the switch configuration.

### Examples

```
-> unp port 1/1 mac-authentication pass-alternate Finance
-> unp port 1/1-3 mac-authentication pass-alternate CustomerA
-> unp port 1/4-10 mac-authentication pass-alternate CustomerC
-> no unp port 1/1-3 mac-authentication pass-alternate
```
-> unp linkagg 5 mac-authentication pass-alternate AltUNP
-> unp linkagg 1-5 mac-authentication pass-alternate CustomerB
-> unp linkagg 10-12 mac-authentication pass-alternate CustomerD
-> no linkagg 5 mac-authentication pass-alternate

**Release History**

Release 7.2.1; command was introduced.
Release 7.2.1.R02; `linkagg` parameter added.
Release 7.3.1; `spb-profile` parameter added, `unp-name` parameter changed to `vlan-profile`.
Release 7.3.4; `vxlan-profile` parameter added.
Release 8.3.1; `vlan-profile`, `spb-profile`, and `vxlan-profile` parameters deprecated.

**Related Commands**

- **unp profile**
  - Configures a UNP profile that is used to classify traffic received on UNP ports.

- **unp port-type**
  - Configures UNP functionality on a port or link aggregate.

- **unp mac-authentication**
  - Configures the MAC authentication status for the UNP port.

- **show unp port**
  - Displays the UNP port parameter configuration.

**MIB Objects**

- `alaDaUNPPortTable`
  - `alaDaUNPPortIfIndex`
  - `alaDaUNPPortPassAltProfileName`
**unp mac-authentication allow-eap**

Configures whether the switch attempts subsequent 802.1X authentication for a device connected to a UNP port on which 802.1X authentication bypass is enabled. When 802.1X bypass is enabled on the port, MAC authentication is performed first on any device connected to that port. This command specifies the conditions under which 802.1X authentication is performed or bypassed after the initial MAC authentication process.

```
unp {port chassis/slot/port1 [-port2] | linkagg agg_id[-agg_id2]} mac-authentication allow-eap {pass | fail | noauth}
```

```
no unp {port chassis/slot/port1 [-port2] | linkagg agg_id[-agg_id2]} mac-authentication allow-eap
```

**Syntax Definitions**

- **chassis**
  
  The chassis identifier.

- **slot/port [-port2]**
  
  The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).

- **agg_id [-agg_id2]**
  
  Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).

- **pass**
  
  Perform 802.1X (EAP frame) authentication if the device passes MAC authentication.

- **fail**
  
  Perform 802.1X (EAP frame) authentication if the device fails MAC authentication.

- **noauth**
  
  Perform 802.1X (EAP frame) authentication if MAC authentication is not configured on the UNP port.

**Defaults**

By default, the allow 802.1X authentication option is not set.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to set the allow 802.1X authentication option back to the default value of none (option is not set).

- The port specified with this command must also have 802.1X bypass enabled (see the `unp 802.1x-authentication bypass-8021x` command). If bypass is not enabled, the option configured with this command does not apply.
This command is only allowed on UNP-enabled ports and link aggregates.

**Examples**

-> unp port 1/1/5 mac-authentication allow-eap pass
-> unp port 1/1/10-15 mac-authentication allow-eap fail
-> no unp port 1/1/5 mac-authentication allow-eap
-> unp linkagg 10 mac-authentication allow-eap noauth
-> unp linkagg 2-5 mac-authentication allow-eap none
-> no unp linkagg 10 mac-authentication allow-eap

**Release History**

Release 7.3.4; command was introduced.

**Related Commands**

- **unp port-type**
  - Configures UNP functionality on a port or link aggregate.

- **unp 802.1x-authentication bypass-8021x**
  - Configures the 802.1X bypass operation status for the UNP port.

- **show unp port**
  - Displays the UNP configuration for the port.

**MIB Objects**

- `alaDaUNPPortTable`
  - `alaDaUNPPortMacAllowEap`
**unp classification**

Configures the classification status for the specified UNP port. When classification is enabled but authentication is disabled or fails, UNP classification rules (such as MAC address, MAC address range, IP network address, or VLAN tag) are applied to the traffic received on the UNP port.

```
unp {port chassis/slot/port1 [-port2] | linkagg agg_id[-agg_id2]} classification

no unp {port chassis/slot/port1 [-port2] | linkagg agg_id[-agg_id2]} classification
```

**Syntax Definitions**

- `chassis` The chassis identifier.
- `slot/port[-port2]` The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
- `agg_id[-agg_id2]` The link aggregate ID number. Use a hyphen to specify a range of link aggregate ID numbers (10-20).

**Defaults**

By default, classification is enabled on the UNP port.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to disable the classification status for a UNP port or link aggregate.
- This command is allowed only on UNP-enabled ports (both bridge and access ports).
- UNP classification rules are applied if authentication is disabled on the port, is enabled on the port but the RADIUS server is not configured, or the authentication method fails.
- If untagged device traffic does not match any of the classification rules, the device is assigned to the default UNP configured for the port.
- If tagged device traffic does not match any of the classification rules and the trust VLAN tag option (see `unp trust-tag`) is enabled for the port, the device is classified based on the VLAN tag of the traffic if a VLAN matching the tag exists in the switch configuration.
- If all of the UNP authentication methods and UNP classification are disabled for the UNP port, then all MAC addresses received on that port are blocked unless a default VLAN is specified and/or trust VLAN tag is enabled for the port.
• When classification is enabled for the port, UNP classification rules are applied in the following order of precedence:
  – MAC address + VLAN tag
  – MAC address
  – MAC address range + VLAN tag
  – MAC address range
  – IP address + VLAN tag
  – IP address
  – VLAN tag

Examples
-> unp port 1/1 classification
-> no unp port 1/1 classification
-> unp port 1/1-4 classification
ERROR: Port 1/3 is not a unp-port
-> unp linkagg 5 classification
-> no unp linkagg 5 classification

Release History
Release 7.2.1; command was introduced.
Release 7.2.1.R02; linkagg parameter added.

Related Commands
show unp classification Displays the UNP classification rule configuration for the switch.
show unp port Displays the UNP configuration for the port.

MIB Objects
alaDaUNPPortTable
  alaDaUNPPortIfIndex
  alaDaUNPPortClassificationFlag
**unp trust-tag**

Configures the option of whether or not to trust the VLAN ID of a tagged packet to determine how the packet is classified.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} trust-tag
```

```
no {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} trust-tag
```

**Syntax Definitions**

- `chassis` - The chassis identifier.
- `slot/port[-port2]` - The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
- `agg_id[-agg_id2]` - The link aggregate ID number. Use a hyphen to specify a range of link aggregate ID numbers (10-20).

**Defaults**

By default, the trust VLAN tag option is disabled.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to disable the trust tag status for a UNP port or link aggregate.

- When this option is enabled, the device is classified into a VLAN or service access point (SAP) when one of the following conditions occur:
  - MAC or 802.1X authentication passes, but the RADIUS server returns a UNP that does not exist in the switch configuration.
  - MAC or 802.1X authentication passes, but the RADIUS server does not return a UNP and the alternate UNP option is disabled for the port.
  - Device traffic does not match any of the classification rules configured for the UNP port.
  - The UNP VLAN obtained from a matching classification rule does not exist in the switch configuration.
  - Auth-Server-Down UNP option is used, but the VLAN associated with that UNP does not exist in the switch configuration.

- When the trust tag option is triggered on a UNP bridge port and a VLAN exists in the switch configuration that matches the VLAN tag, a VLAN-port-association (VPA) is created between the UNP port and the matching VLAN even if the matching VLAN is _not_ associated with a UNP.
• When the trust tag option is triggered on a UNP access port, the VLAN tag information is used to create a dynamic SAP (virtual port) to which the access port is associated.

• Enabling the trust VLAN ID tag option provides an implicit method of VLAN tag classification that will accept tagged traffic matching any of the existing UNPs without the need to create specific classification rules for those profiles.

Examples

-> unp port 1/1 trust-tag
-> unp port 1/1-4 trust-tag
-> no unp port 1/1 trust-tag

-> unp linkagg 5 trust-tag
-> unp linkagg 6-10 trust-tag
-> no unp linkagg 5 trust-tag

Release History

Release 7.2.1; command was introduced.

Related Commands

MIB Objects

alaDaUNPPortTable
    alaDaUNPPortIfIndex
    alaDaUNPPortTrustTagStatus
**unp default-profile**

Configures the name of an existing UNP classification profile to serve as the default UNP for the specified UNP port or link aggregate.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} default-profile profile_name
no unp {port chassis/slot/port1[-port2] | linkagg agg_id} default-profile
```

**Syntax Definitions**

- `chassis` The chassis identifier when running in virtual chassis mode.
- `slot/port[-port2]` The slot and port number (3/1) of a UNP-enabled port. Use a hyphen to specify a range of ports (3/1-8).
- `agg_id[-agg_id2]` The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).
- `profile_name` The name of an existing UNP classification profile.

**Defaults**

By default, there is no default profile configured for UNP ports or link aggregates.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of the command to remove the default UNP from the port configuration.
- This command is allowed only on UNP-enabled ports.
- The UNP classification profile specified with this command must already exist in the switch configuration.
- The default UNP is used to classify devices on the port when one of the following conditions occur:
  - UNP authentication and classification are not enabled on the port.
  - MAC authentication fails.
  - Device traffic does not match any UNP classification rules.
  - The UNP trust VLAN tag option (see `unp trust-tag`) is enabled for the port, but the VLAN ID specified in the tag field of the device traffic does not exist in the switch configuration.
  - Untagged device traffic is not classified.
**Examples**

-> unp port 1/1 default-profile Sales  
-> no unp port 1/1 default-profile  
-> unp port 1/1-4 default-profile Sales  
ERROR: Port 1/2 is not a unp port  
ERROR: Port 1/3 is not a unp port  
-> unp port 1/1 default-profile BAD-UNP  
ERROR: UNP doesn't exist  
-> no unp port 1/1-4 default-profile  
-> unp linkagg 5 default-profile VM1-Server1  
-> no unp linkagg 5 default-profile

**Release History**

Release 8.3.1; command was introduced.

**Related Commands**

- **unp profile**  
  Configures a UNP profile that is used to classify traffic received on UNP ports.

- **unp port-type**  
  Configures the status of UNP functionality on the port.

- **unp trust-tag**  
  Configures whether or not a device is classified into an existing VLAN that matches the VLAN ID tag of the packets received from the device.

- **show unp port**  
  Displays the UNP configuration for the port.

**MIB Objects**

alaDaUNPPortTable
  - alaDaUNPPortIfIndex
  - alaDaUNPPortDefaultProfileName
**unp domain**

Assigns a UNP port or link aggregate to a customer domain (UNP group).

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} domain domain_id
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} domain domain_id
```

### Syntax Definitions

**chassis**

The chassis identifier.

**slot/port[-port2]**

The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).

**agg_id[-agg_id2]**

The link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).

**domain_id**

The numerical domain ID to which the specified port or link aggregate is assigned.

### Defaults

By default, all UNP ports are assigned to customer domain zero (0).

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- The domain ID specified with this command must already exist in the switch configuration.
- Customer domains are used to group physical UNP ports or link aggregates into one logical domain.
- Once a port is assigned to a specific customer domain, only classification rules associated with the same customer domain ID are applied to that port.

### Examples

- `-> unp port 1/1 domain 1`
- `-> unp port 1/1-3 domain 2`
- `-> no unp port 1/1 domain 1`
- `-> unp linkagg 5 domain 5`
- `-> unp linkagg 8-10 domain 6`
- `-> no unp linkagg 5 domain 5`
**Release History**

Release 8.3.1; command was introduced.

**Related Commands**

- `unp port-type`  
  Configures the status of UNP for the specified port or link aggregate.

- `unp domain description`  
  Creates a customer domain ID.

- `show unp domain`  
  Displays the available customer domain IDs.

- `show unp port`  
  Displays the UNP configuration for the port.

**MIB Objects**

- `alaDaUNPPortTable`  
  - `alaDaUNPPortIfIndex`
  - `alaDaUNPPortDomainId`
**unp aaa-profile**

Assigns the name of an existing authentication, authorization, and accounting (AAA) profile to the specified UNP port or link aggregate. This type of profile defines AAA configuration options (such as RADIUS servers and RADIUS client attributes) that are applied to device traffic received on the UNP port to which the profile is assigned.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} aaa-profile profile_name
```

```
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} aaa-profile
```

**Syntax Definitions**

- `chassis/slot/port1[-port2]`  
  The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).

- `agg_id[-agg_id2]`  
  The link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).

- `profile_name`  
  The name of an existing AAA profile.

**Defaults**

By default, there is no AAA profile assigned to UNP ports or link aggregates. The global AAA configuration for the switch is applied.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900V72/C32</th>
<th>6900X48C6/T48C6</th>
<th>6900X48C4E/V48C8</th>
<th>6900C32E/T24C2</th>
<th>X24C2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of the command to remove the AAA profile from the port configuration.
- The AAA profile specified with this command must already exist in the switch configuration.
- AAA profiles are configured using the `aaa profile` command. See the “AAA Commands” chapter in the *OmniSwitch AOS Release 8 CLI Reference Guide* for more information.

**Examples**

```
-> unp port 1/1/5 aaa-profile A1
-> no unp port 1/1/5 aaa-profile

-> unp port 1/1/1-5 aaa-profile A2
-> no unp port 1/1/1-5 aaa-profile

-> unp linkagg 10 aaa-profile A3
```
-> no unp linkagg 10 aaa-profile

**Release History**

Release 8.1.1; command was introduced.

**Related Commands**

- **unp port-type**  
  Configures UNP functionality for the specified port or link aggregate.

- **aaa profile**  
  Configures an AAA configuration profile.

- **show unp port**  
  Displays the UNP configuration for the port.

**MIB Objects**

- **alaDaUNPPortTable**
  - **alaDaUNPPortIfIndex**
  - **alaDaUNPPortAaaProfile**
**unp port port-template**

Assigns the name of an existing port template to the specified UNP port or link aggregate. A port template defines UNP port configuration options (such as the type of authentication, classification status, a default profile) that are applied to the UNP port to which the template is assigned.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} port-template template_name
```

```
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} port-template
```

**Syntax Definitions**

- `chassis/slot/port1[-port2]` The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).
- `agg_id[-agg_id2]` The link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
- `template_name` The name of an existing port template.

**Defaults**

By default, the “bridgeDefaultPortTemplate” port template is assigned to UNP bridge ports, and the “accessDefaultPortTemplate” port template is assigned to UNP access ports.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Support</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of the command to remove the port template from the port configuration.
- When a custom template is removed from a UNP port, the port reverts back to using the default template to define UNP port parameter options.
- The port template specified with this command must already exist in the switch configuration.
- When a port template is applied to a UNP port, the parameter values defined in the template will override any existing UNP port configuration. In addition, any attempt to explicitly configure a port that is associated with a template is not allowed.

**Examples**

```
-> unp port 1/1/5 port-template up1
-> unp port 1/1/1-5 port-template up2
-> no unp port 1/1/5 port-template
-> no unp port 1/1/1-5 port-template
```
-> unp linkagg 10 port-template up3
-> unp linkagg 10-50 port-template up4
-> no unp linkagg 10 port-template
-> no unp linkagg 10-50 port-template
-> unp port 1/10 802.1x-authentication
ERROR: Port Template already enforced on port, please remove it for manual config on Port

Release History
Release 8.3.1; command was introduced.

Related Commands

unp port-type
Configures the UNP status and port type for the specified port or link aggregate.

unp port-template
Configures a port template.

show unp port config
Displays the UNP configuration for the port.

MIB Objects
alaDaUNPPortTable
alaDaUNPPortIfIndex
alaDaUNPPortPortTemplate
**unp direction**

Configures whether network access control is applied to both incoming and outgoing traffic or only applied to incoming traffic on the specified UNP bridge port or link aggregate.

```plaintext
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} direction {both | in}
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} direction
```

**Syntax Definitions**

- **chassis** The chassis identifier.
- **slot/port[-port2]** The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
- **agg_id[-agg_id2]** Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).

- **both** Enables bidirectional network access control on the specified port or link aggregate.
- **in** Enables network access control for incoming traffic only on the specified port or link aggregate.

**Defaults**

By default, bidirectional network access control is enabled on the port.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900V72/C32</th>
<th>6900X48C6/T48C6</th>
<th>6900X48C8/C32E/T24C2</th>
<th>6900X24C2</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to set the network access control direction to the default (**both**).
- When the port control direction is set to **both**, egress broadcast, unknown unicast, and multicast traffic is blocked on the UNP port.
- When the port control direction is set to **in**, egress broadcast, unknown unicast, and multicast traffic is allowed on the UNP port.
- This command applies only to ports and link aggregates configured as UNP bridge ports; this command does not apply to UNP access ports.

**Examples**

```plaintext
-> unp port 1/1/5 direction in
```
-> unp port 1/1/10-15 direction both
-> no unp port 1/1/10-15 direction
-> unp linkagg 10 direction in
-> unp linkagg 2-5 direction both
-> no unp linkagg 2-5 direction

**Release History**

Release 7.3.4; command was introduced.

**Related Commands**

- `unp port-type` Configures UNP functionality on a port or link aggregate.
- `unp 802.1x-authentication` Configures the 802.1X authentication status for the UNP port.
- `show unp port` Displays the UNP configuration for the port.

**MIB Objects**

- `alaDaUNPPortTable`
  - `alaDaUNPPortAdminControlledDirections`
unp admin-state

Enables or disables the UNP configuration for a port or link aggregate.

```
unp {port {chassis/slot/port1[-port2] | linkagg agg_id1[-agg_id2]} admin-state {enable | disable}
```

**Syntax Definitions**

- **chassis**: The chassis identifier.
- **slot/port[-port]**: The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
- **agg_id1[-agg_id2]**: The link aggregate ID number. Use a hyphen to specify a range of link aggregate ID numbers (5-10).
- **enable**: Activates the UNP configuration for the UNP port or link aggregate. UNP functionality is applied to traffic received on the UNP port or link aggregate.
- **disable**: Disables the UNP configuration for the UNP port or link aggregate. UNP functionality is not applied to traffic received on the UNP port or link aggregate.

**Defaults**

By default, UNP is administratively enabled at the time UNP functionality is configured for the port or link aggregate.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

When UNP functionality is disabled, the UNP configuration for the port or link aggregate is retained but is not applied to traffic received on the port or link aggregate.

**Examples**

- `unp port 1/1 admin-state disable`
- `unp port 1/2-5 admin-state disable`
- `unp port 1/1 admin-state enable`
- `unp linkagg 5 admin-state disable`
- `unp linkagg 8-10 admin-state disable`
- `unp linkagg t admin-state enable`

**unp dynamic-service**

Configures whether the System Default service profile dynamically creates an SPB Service Access Point (SAP) or a VXLAN SAP based on the traffic received on the UNP access port.

```
unp {port [chassis_id/|slot/port1]-port2] | linkagg agg_id[-agg_id2]} dynamic-service {spb | vxlan | none}
```

**Syntax Definitions**

- `chassis_id` The chassis identifier when running in virtual chassis mode.
- `slot/port[-port2]` The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
- `agg_id[-agg_id2]` Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
- `spb` Dynamically creates an SPB SAP.
- `vxlan` Dynamically creates a VXLAN SAP *(supported only on OmniSwitch 6900-X72/Q32 and OmniSwitch 6900-V72/C32)*.
- `none` No SPB or VXLAN SAP is dynamically created.

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- This command applies only to ports and link aggregates configured as UNP access ports; this command does not apply to UNP bridge ports.

- Traffic received on UNP access ports that is not assigned to a user-defined service profile is assigned to the System Default service profile. The System Default profile attributes used to dynamically create a SAP for such traffic are derived based on the setting for this UNP port parameter.
  - If the dynamic service port parameter is set to SPB, then a calculated SPB control BVLAN, a calculated default I-SID number, and an incremental reserved service ID number are used to dynamically create a SAP for SPB service traffic received on the UNP access port.
  - If the dynamic service port parameter is set to VXLAN, then a calculated VNI number, a default multicast group IP address, and an incremental reserved service ID number are used to dynamically create a SAP for VXLAN service traffic received on the UNP access port.
**Examples**

-> unp port 1/1/5 dynamic-service vxlan
-> unp port 1/1/10-15 dynamic-service spb
-> unp port 1/1/10-15 dynamic-service none
-> unp linkagg 10 dynamic-service vxlan
-> unp linkagg 2-5 dynamic-service spb
-> unp linkagg 2-5 dynamic-service none

**Release History**

  Configures UNP functionality on a port or link aggregate.
- `show unp port`  
  Displays the UNP configuration for the port.

**MIB Objects**

- `alaDaUNPPortTable`
  - `alaDaUNPPortDynamicService`
**unp vlan**

Configures an untagged or tagged VLAN-port association between the specified UNP bridge port and VLAN ID. This type of static VLAN assignment is particularly useful when connecting silent devices to UNP bridge ports.

```plaintext
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} vlan vlan_id [-vlan_id2] [tagged]
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} vlan vlan_id [-vlan_id2]
```

**Syntax Definitions**

- `chassis/slot/port1[-port2]`:
  The chassis ID, slot, and port number (3/1/1) for a specific UNP bridge port. Use a hyphen to specify a range of ports (3/1/1-8).

- `agg_id[-agg_id2]`:
  Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).

- `vlan_id [-vlan_id2]`:
  The VLAN ID to assign to the UNP port. Use a hyphen to specify a range of VLAN IDs.

- `tagged`:
  Configures a tagged VLAN association for the UNP bridge port.

**Defaults**

By default, no VLAN associations are configured for UNP bridge ports.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove a VLAN association from the UNP port configuration. The `tagged` keyword is not required to remove a tagged VLAN association.

- This command applies only to ports and link aggregates configured as UNP bridge ports; this command does not apply to UNP access ports.

- When the `tagged` parameter option is not specified, the VLAN-port association created is untagged.

- Configuring a UNP port or link aggregate with an untagged and tagged VLAN-port association is allowed as long as the untagged and tagged VLANs are different (for example, `unp port 1/4/45 vlan 100` and `unp port 1/4/45 vlan 200 tagged`).

- When this command is used to assign a VLAN to a UNP bridge port, the port goes into a forwarding state for egress traffic associated with the VLANs assigned to the port. This automatically occurs even
when there is no MAC address learned on the UNP port in the assigned VLANs and regardless of the direction value (in or both) set for the port.

**Examples**

```
-> unp port 1/1/5 vlan 500
-> unp port 1/1/5 vlan 600 tagged
-> unp port 1/1/10 vlan 100-105
-> unp port 1/1/10 vlan 200-205 tagged
-> no unp port 1/1/5 vlan 500
-> no unp port 1/1/5 vlan 600
-> no unp port 1/1/10 vlan 100-105
-> no unp port 1/1/10 vlan 200-205

-> unp linkagg 10 vlan 500
-> unp linkagg 10 vlan 600 tagged
-> unp linkagg 20 vlan 100-105
-> unp linkagg 20 vlan 200-205 tagged
-> no unp linkagg 10 vlan 500
-> no unp linkagg 10 vlan 600
-> no unp linkagg 20 vlan 100-105
-> no unp linkagg 20 vlan 200-205
```

**Release History**

Release 8.2.1; command was introduced.
Release 8.5R4; **tagged** parameter added.

**Related Commands**

- **unp port-type**
  - Configures UNP functionality on a port or link aggregate.
- **show unp port configured-vlans**
  - Displays the VLAN assignments configured for UNP bridge ports or link aggregates.

**MIB Objects**

- alaDaUNPPortVlanTable
- alaDaUNPPortVlanVID
unp port profile

Configures a UNP service profile as a static profile for the specified UNP port. This type of profile assignment is particularly useful for silent devices that are connected to a UNP port; the profile SAP won’t age out when the device goes idle.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} profile profile_name
```

```
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} profile profile_name
```

**Syntax Definitions**

- **chassis/slot/port[-port2]** The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).
- **agg_id[-agg_id2]** Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
- **profile_name** The name of an SPB, VXLAN, or L2 GRE service profile to statically assign to the specified UNP port.

**Defaults**

By default, no static profile is configured for UNP ports.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove a static profile association from the UNP port configuration.

- When a MAC address is learned on a UNP port and classified into a service profile, a SAP is dynamically created based on the parameter values of the service profile. Once the MAC address associated with the dynamic SAP ages out, the SAP ages out as well. To accommodate silent devices, use this command to assign a service profile to the UNP port. This will dynamically create a persistent SAP that will not age out when the device MAC address ages out; the SAP continues to receive broadcast and multicast packets for the silent device.

- Make sure the specified UNP profile name already exists in the switch configuration and is mapped to an SPB, VXLAN, L2 GRE, or static service.
  - Profiles mapped to SPB, VXLAN, or static services are configured as static profiles on UNP access ports.
  - Profiles mapped to an L2 GRE service are configured as static profiles on UNP bridge or access ports.
• There can be up to eight SPB or VXLAN service profiles statically assigned to one UNP access port, but mixing service types on the same port is not supported. For example, configure only eight SPB service profiles or eight VXLAN service profiles.

• There can only be one L2 GRE service profile statically assigned to a UNP bridge or access port.

Examples

- unp port 1/1/5 profile static-spb1
- unp port 1/1/5 profile static-spb2
- unp port 1/1/10 profile static-vxlan1
- unp port 1/1/10 profile static-vxlan2
- unp port 1/20 profile static-l2gre1
- no unp port 1/20 profile static-l2gre1

- unp linkagg 10 profile static-spb1
- unp linkagg 20 profile static-vxlan1
- unp linkagg 30 profile static-l2gre1
- no unp linkagg 30 profile static-l2gre1

MIB Objects

alaDaUNPPortTable
alaDaUNPPortProfile
**unp port ap-mode**

Configures the status of the Access Point (AP) mode for the specified UNP port or link aggregate.

```
unp {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} ap-mode {secure}
no unp {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} ap-mode {secure}
```

### Syntax Definitions

- **chassis/slot/port[-port2]**: The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).
- **agg_id[-agg_id2]**: The link aggregate ID number for a specific UNP link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).
- **secure**: Set the secure ap-mode configuration on port enabled or disabled.

### Defaults

By default, the AP mode status for the port or link aggregate is set to the global AP mode status when UNP is enabled on the port or link aggregate. For example, if the global status is disabled, the port-level status is initially disabled. Secure ap-mode is disabled by default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Model</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- AP mode functionality is supported on UNP bridge ports and on UNP access ports. On bridge ports, the AP device and AP clients are learned into the VLAN domain; on access ports, the AP device and AP clients are learned into the Shortest Path Bridging (SPB) service domain.

- When the AP mode is enabled on the specified UNP bridge port and an AP device is detected on that port, the following actions are triggered to automatically change the operational status of the specified options (the operational status overrides the configured status):
  - The transmission of LLDP Port VLAN ID and AP Location TLVs is operationally enabled on the UNP bridge port.
  - The trust tag status for the UNP bridge port is operationally enabled.
  - The global status for dynamic VLAN configuration is operationally enabled for the switch.

- When the AP mode is enabled on a UNP access port and an AP device is detected on that port, the following actions are triggered to automatically change the operational status of the specified options (the operational status overrides the configured status):
The transmission of LLDP Port VLAN ID and AP Location TLVs is operationally enabled on the UNP access port.

The trust tag function is not used; AP clients are not learned into VLAN-based profiles. Instead, AP clients are learned into a UNP profile that is mapped to SPB service parameters. The SAP that is dynamically created based on the service parameters carries the AP client traffic.

MAC or 802.1X authentication is bypassed for AP clients. However, the other Layer 2 UNP port options for learning and assigning an AP client to a profile are available, such as rule classification, a default SPB service profile, or a dynamic SPB System Default profile.

- Once the AP MAC address is detected and learned, a built-in LLDP UNP classification rule for access points classifies the AP device into one of the following built-in default profiles:
  - **defaultWLANProfile** for AP devices connected to UNP bridge ports. This profile is mapped to a VLAN into which the AP device is classified. A VLAN-port association (VPA) is established between the UNP bridge port and profile VLAN on which the AP MAC address is learned and forwarded.
  - **defaultWLANAccessProfile** for AP devices connected to UNP access ports. The profile is mapped to SPB service parameters. When the AP device is classified into this profile, an SPB Service Access Point (SAP) is dynamically created. A SAP-port association is established between the UNP access port and the SAP on which the AP MAC address is learned and forwarded.

- If the UNP AP mode is not enabled, the detection, learning, and management of connected OmniAccess Stellar AP devices may not occur as expected.

- AP mode functionality is not supported on Learned Port Security (LPS) ports.

- Use **secure** parameter to enable or disable the secure ap-mode.

**Examples**

- `unp port 1/1/6 ap-mode`
- `unp linkagg 10 ap-mode`
- `no unp port 1/1/6 ap-mode`
- `no unp linkagg 10 ap-mode`
- `unp port 1/1/1 ap-mode secure`
- `no unp port 1/1/1 ap-mode secure`

**Release History**

Release 8.6R1; command was introduced.
Release 8.81R1; **secure** parameter added

**Related Commands**

**MIB Objects**

- alaDaUNPPortTable
- alaDaUNPPortApMode
- alaDaUNPPortApModeSecurity
unp port-template

Configures a UNP port template that is used to apply a pre-defined port configuration to a UNP port or link aggregate. Using a port template to configure UNP functionality on a port or link aggregate avoids having to configure each parameter with a separate CLI command. Applying a template configures all port-based parameters with a single CLI command.

This section describes the base command (unp port-template) along with optional command keywords that are used to configure port parameter values that are applied when the template is assigned to a UNP port or link aggregate. Optional keywords are listed separately but can be entered in combination on the same command line. Use the no form for the keywords to change a specific parameter value for the template.

There are two default port templates: “bridgeDefaultPortTemplate” (applied to UNP bridge ports) and “accessDefaultPortTemplate” (applied to UNP access ports). These templates define a default set of port parameter values that are applied at the time a port or link aggregate is configured as a UNP bridge or access port. The default templates cannot be deleted, but the template parameter values are configurable through this command.

unp port-template {template_name | bridgeDefaultPortTemplate | accessDefaultPortTemplate}
   [802.1x-authentication]
   [802.1x-authentication pass-alternate profile_name]
   [mac-authentication]

   [mac-authentication allow-eap {pass | fail | noauth}]
   [force-l3-learning {port-bounce}]
   [admin-state {enable | disable}]
   [dynamic-service {spb | vxlan}]
   [vlan vlan_id [-vlan_id2] [tagged]]
   [l2-profile l2profile_name]
   [profile profile_name]
   [ap-mode][secure]

no unp port-template template_name [802.1x-authentication | 802.1x authentication pass-alternate | mac-authentication | mac-authentication pass-alternate | ...]
**Syntax Definitions**

- `template_name` - The name to associate with the UNP port template.
- `bridgeDefaultPortTemplate` - The name of the default port template applied to UNP bridge ports.
- `accessDefaultPortTemplate` - The name of the default port template applied to UNP access ports. *This parameter is currently not supported on an OmniSwitch 6465, OmniSwitch 6560 or OmniSwitch 6570M.*

**Defaults**

The following table contains the default values for the system-defined port templates (“accessDefaultPortTemplate” and “bridgeDefaultPortTemplate”):

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Usage Guidelines

- Use the no form of this command to remove a port template from the switch configuration.

- To change the value of a specific port template parameter, specify the parameter keyword with this command. For example, no unp port-template port1 mac-authentication, unp port-template port1 domain 2, or unp port-template port1 default-profile defprof1. The new parameter values are applied to all UNP ports to which the template is assigned.

- The l2-profile port template parameter is not supported on the OmniSwitch 9900.

- If the name of the template does not exist when this command is used to modify a port parameter, the switch will automatically create a new template using the name specified. For example, the unp port-template port1 mac-authentication command will create the “port1” template if it does not already exist in the switch configuration.

- When a port template is applied to a UNP port, the parameter values defined in the template will override any existing UNP port configuration. In addition, any attempt to explicitly configure a port that is associated with a template is not allowed.

- For more information about specific port parameter values, refer to the following explicit UNP port configuration commands for each template parameter:

<table>
<thead>
<tr>
<th>Port Template Parameter</th>
<th>Explicit Port Configuration Command</th>
</tr>

- `-> no unp port-template pt1 ap-mode secure`

## Release History

Release 8.3.1; command was introduced.
Release 8.3.1.R02; `force-l3-learning` parameter added.
Release 8.4.1; `l2-profile` parameter added.
Release 8.5R4; `profile` parameter added, `tagged` option added to `vlan` parameter.
Release 8.6R1; `ap-mode` parameter added.
Release 8.8R1; `secure` parameter added.
Related Commands

unp port port-template
Assigns a port configuration template to a UNP port.

show unp port config
Displays the UNP configuration for the port, including the name of the port template associated with the port, if any.

show unp port-template
Displays the port template configuration.

**unp network-group**

Configures a network group name and its associated IPv4 addresses. The group is used to specify source or destination IP networks for UNP router domain authentication. Users attempting to access networks defined in this group are challenged for authentication.

```
unp network-group net_group_name ip_address [mask net_mask] [ip_address2 [mask net_mask2]...]
no unp network-group net_group_name [ip_address [mask net_mask] [ip_address2 [mask net_mask2]...]
```

### Syntax Definitions

- `net_group_name`: The name of the network group (up to 31 alphanumeric characters).
- `ip_address`: An IPv4 address included in the network group.
- `net_mask`: The mask for the IPv4 address. If no mask is entered, the IPv4 address is assumed to be a host address.
- `ip_address2`: Optional. Another IPv4 address to be included in the network group. Multiple IPv4 addresses (up to a maximum of five) may be configured for a network group. Separate each address/mask combination with a space.
- `net_mask2`: Optional mask for the IPv4 address. If no mask is entered, the natural mask for the address will be used.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of the command to remove a network group from the configuration or to remove an IP address from a network group.
- The network group defined with this command is used to configure a router authentication condition that will trigger authentication for user traffic that matches the IPv4 networks defined in the group.
- Make sure that the IP networks/masks specified for a network group do not overlap.

### Examples

```
-> unp network-group net-grpl 10.10.12.5 mask 255.255.0.0
```
-> unp network-group net-grp1 20.10.12.5 mask 255.255.0.0 10.50.3.1
-> unp network-group net-grp1 30.12.12.5
-> unp network-group net-grp1 10.10.12.5 mask 255.255.0.0 10.50.3.1 30.12.12.5
-> no unp network-group net-grp1 10.10.12.5
-> no unp network group net-grp1

**Release History**

Release 8.5R4; command was introduced.

**Related Commands**

- **unp router-auth user-group**
  Configures a user group as a condition for Layer 3 authentication. A network group is specified when this type of condition is configured.

- **unp router-auth cp-profile**
  Configures a Captive Portal profile for router authentication.

- **unp router-auth user flush**
  Performs a MAC address flush of the specified router domain authentication users.

- **show unp network-group**
  Displays the UNP network group configuration.

**MIB Objects**

  - `alaDaUNPNetworkGroupIpAddrType`
  - `alaDaUNPNetworkGroupIpAddr`
  - `alaDaUNPNetworkGroupIpMask`
**unp router-auth user-group**

Configures a user group as a condition for Layer 3 authentication. A user group specifies a destination network group and an optional source network group; traffic matching the networks in these groups is subject to router domain authentication.

```
unp router-auth user-group user_group_name {[src-network-group net_group] dst-network-group net_group_name}
```

```
no unp router-auth user-group user_group_name
```

**Syntax Definitions**

- **user_group_name**: The name of the router authentication condition (up to 31 alphanumeric characters).
- **net_group_name**: The name of an existing network group (configured through the `unp network-group` command).

**Defaults**

N/A

</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of the command to remove a router authentication user group from the switch configuration.
- Make sure the network group specified with this command exists in the switch configuration before attempting to configure the router authentication user group.
- To configure an optional source network group; specify the source network group name first then the destination network group name.
- When the first router authentication user group is configured, the router domain authentication feature is enabled for the switch.
- HTTP/HTTPS traffic that matches a user group condition is challenged with Captive Portal authentication; other IPv4 traffic that matches a user group condition is challenged with IP-based authentication.
• Configuring multiple router authentication user groups is allowed.
  – Any two user groups can share the same source network group as long as the destination network
group for each user group is different and the IP addresses do not overlap.
  – Any two user groups can share the same destination network group as long as the source network
group for each user group is different and the IP addresses do not overlap.

Examples

- unp router-auth user-group ra-ugrp1 src-network-group net-grp1 dst-network-group net-grp2
- unp router-auth user-group ra-ugrp2 dst-network-group net-grp3

- no unp router-auth user-group ra-ugrp1
- no unp router-auth user-group ra-ugrp2

- unp router-auth user-group ra-ugrp1 dst-network-group grp5
  ERROR: Dst Network Group does not exist
- unp router-auth user-group ra-ugrp2 src-network-group grp5 dst-network-group net-grp2
  ERROR: Src Network Group does not exist

Release History

Release 8.5R4; command was introduced.

Related Commands

unp network-group Configures a network group name and its associated IPv4 addresses.
unp router-auth cp-profile Configures a Captive Portal profile for router authentication.
unp router-auth user flush Performs a MAC address flush of the specified router domain
  authentication users.
show unp router-auth user-
  group Displays the router authentication user group configuration.

MIB Objects

alaDaUNPRouterAuthUserGroupTable
  alaDaUNPRouterAuthenticationName
  alaDaUNPRouterAuthenticationSrcGroup
  alaDaUNPRouterAuthenticationDestGroup
unp router-auth cp-profile

Specifies an existing Captive Portal (CP) profile to use for router authentication. This type of profile defines CP authentication parameter options that are applied to users that match router authentication user group conditions. If no CP profile is specified, then the global CP configuration is applied.

`unp router-auth cp-profile cp_profile_name`

`no unp router-auth cp-profile cp_profile_name`

Syntax Definitions

`cp_profile_name` The name of an existing CP profile (configured through the captive-portal-profile command).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the `no` form of the command to remove the CP profile assignment.
- Make sure the CP profile name specified with this command exists in the switch configuration.
- The following global and CP profile settings are applied for CP authentication:
  - The RADIUS server to use for authentication.
  - Session timeout value (determines aging of an accept/deny entry).
  - CP maximum retry attempts (number of login attempts the user is given before access is blocked).
  - Success redirect URL (the URL to display to the client after successful CP authentication)
- The following global and CP profile settings are applied for IP-based authentication:
  - The RADIUS server to use for authentication.
  - Session timeout value (determines aging of an accept/deny entry).
- If the RADIUS server returns a session timeout value that is set to zero and the trust RADIUS option is enabled, then the session timeout for CP and IP authenticated users is set to infinity (the user session does not time out). A zero session timeout value is supported only when it is returned by the RADIUS server; setting the value to zero through the CLI is not supported.
• The router domain authentication feature is not enabled for the switch until at least one router authentication user group is configured.

• CP authentication is applied to HTTP/HTTPS traffic that matches a router authentication user group condition.

Examples

-> unp router-auth cp-profile cp-1
-> no unp router-auth cp-profile

Release History

Release 8.5R4; command was introduced.

Related Commands

unp network-group
Configures a network group name and its associated IPv4 addresses.

unp router-auth user-group
Configures a user group as a condition for Layer 3 authentication. A network group is specified when this type of condition is configured.

unp router-auth user flush
Performs a MAC address flush of the specified router domain authentication users.

show unp router-auth configuration
Displays the CP profile configuration that is used for router domain authentication.

MIB Objects

alaDaUNPRouterAuthenticationConfig
alaDaUNPRouterAuthCpProfileName
**unp router-auth user flush**

Performs a MAC address flush of the specified router domain authentication users.

`unp router-auth user flush user-group user_group_name | user-name cp_user_name | [ip-address ipv4_address] | auth-type {cp | ip} | all`

---

**Syntax Definitions**

- `user_group_name`: The name of an existing router authentication user group.
- `cp_user_name`: The Captive Portal (CP) user name.
- `ipv4_address`: The IPv4 address associated with the router authentication user.
- `cp`: Clears only the CP-authenticated users.
- `ip`: Clears only the IP-authenticated users.
- `all`: Clears all of the router authentication users.

---

**Defaults**

N/A

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>

</tr>
</tbody>
</table>

---

**Usage Guidelines**

- Use the `user-group` parameter to flush all users associated with the specified router authentication user group.
- Use the `user-name` parameter to flush the CP user name associated with the router authentication user.
- Use the `ip-address` parameter to flush the IPv4 address associated with the router authentication user.
- Use the `auth-type` parameter with the `cp` or `ip` options to flush router authentication users that were authenticated through Captive Portal or IP-based mechanisms.
- Use the `all` parameter to flush all router authentication users learned on the switch.

---

**Examples**

- `-> unp router-auth user flush all`
- `-> unp router-auth user flush user-group ra-grp1`
- `-> unp router-auth user flush user-name san`
- `-> unp router-auth user flush ip-address 10.0.0.1`
- `-> unp router-auth user flush auth-type cp`
-> unp router-auth user flush auth-type ip

<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

A UNP network group is used to configure a router authentication user group condition that will trigger authentication for user traffic that matches the IPv4 networks defined in the network group.

Examples

```
-> show unp network-group
  Network Group Name     IP-Address/Mask
-----------------------+----------------------------------
  net-grp1              10.0.0.1/255.255.0.0, 20.0.0.1/255.255.0.0, 30.0.0.1/255.0.0.0
  net-grp2              40.0.0.1/255.255.0.0
  net-grp3              10.0.0.1/255.255.0.0, 40.0.0.1/255.255.0.0

Total Network-Group Count: 3
```

Output definitions

- **Network Group Name**: The name of the UNP network group.
- **IP-Address/Mask**: The IPv4 network addresses that are associated with the network group name.

Release History

Release 8.5R4; command was introduced.
Related Commands

unp network-group  Configures a network group name and its associated IPv4 addresses.

MIB Objects

alaDaUNPNetworkGroupTable
  alaDaUNPNetworkGroupName
  alaDaUNPNetworkGroupIpAddrType
  alaDaUNPNetworkGroupIpAddr
  alaDaUNPNetworkGroupIpMask
**show unp router-auth user-group**

Displays the router authentication user group configuration.

**show unp router-auth user-group** [user_group_name]

### Syntax Definitions

user_group_name

The name of an existing router authentication user group.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

A router authentication user group specifies Layer 3 conditions for authentication; UNP network groups assigned to the router authentication user group contain IPv4 addresses. User traffic matching these networks are challenged with Captive Portal or IP-based authentication.

### Examples

```plaintext
-> show unp router-auth user-group
User-Group Name       Src-Network-Group       Dst-Network-Group
------------------------------+-----------------+-------------------
ra-ugrp1                net-grp1            net-grp2
ra-ugrp2                net-grp3            net-grp2
ra-ugrp3                net-grp1            net-grp3
ra-ugrp4                net-grp2            net-grp3
ra-ugrp5                net-grp2            net-grp4

-> show unp router-auth user-group UserGrp1
User-Group Name       Src-Network-Group       Dst-Network-Group
------------------------------+-----------------+-------------------
ra-ugrp3                net-grp1            net-grp3

Rule Status = ACTIVE
```

### output definitions

User-Group-Name The name of the router authentication user group.
**output definitions**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Src-Network-Group</td>
<td>The name of the UNP network group that is designated as a group of source IPv4 networks. Specifying a source network group is optional when configuring a user group condition.</td>
</tr>

  - `alaDaUNPRouterAuthenticationName`  
  - `alaDaUNPRouterAuthenticationSrcGroup`  
  - `alaDaUNPRouterAuthenticationDestGroup`
show unp router-auth configuration

Displays the Captive Portal (CP) profile configuration that is used for router domain authentication.

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>

<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

If no CP profile is designated for this feature, then the global CP configuration is used.

Examples

-> show unp router-auth configuration
   CP-Profile Name : cp-prof1

   CP Params:
   Captive Portal AAA Profile Name = a1
   Captive Portal Success Redirect URL = http://server-1.com/pass.html
   Captive Portal Retry Count = 3

output definitions

<table>
<thead>
<tr>
<th>CP-Profile Name</th>
<th>The name of the Captive Portal profile to use for router authentication. Configured through the captive-portal-profile command.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Captive Portal AAA Profile Name</td>
<td>The name of the AAA profile assigned to the CP profile. The AAA profile defines the session timeout value. Configured through the captive-portal-profile command.</td>
</tr>
<tr>
<td>Captive Portal Success Redirect URL</td>
<td>The URL to which a user is redirected after successful CP authentication. Configured through the captive-portal-success-redirect-url command.</td>
</tr>
<tr>
<td>Captive Portal Retry Count</td>
<td>The number of login attempts a client is allowed. Configured through the captive-portal retry-count command.</td>
</tr>
</tbody>
</table>
**Release History**

Release 8.5R4; command was introduced.

**Related Commands**

`unp router-auth cp-profile` Specifies an existing CP profile to use for router authentication.

**MIB Objects**

`alaDaUNPRouterAuthenticationConfig`  
`alaDaUNPRouterAuthCpProfileName`
show unp router-auth users

Displays information about users authenticating through the router authentication process.

show unp router-auth users [user-name cp_user_name] [ip-address ipv4_address] [auth-type {cp | ip}] [auth-status {pass | fail}]

Syntax Definitions

- cp_user_name: The Captive Portal (CP) user name for the router authentication user.
- ipv4_address: The IPv4 address of the router authentication user.
- cp: Displays only Captive Portal authenticated users.
- ip: Displays only IP authenticated users.
- pass: Displays only users that have successfully authenticated.
- fail: Displays only users that have failed authentication.

Defaults
By default, all router authenticated users are displayed.

Platforms Supported
This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supported</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the optional parameters provided with this command to filter the output display results.
- The “Username” field displays either the user name that was entered to authenticate a user device through the Captive Portal process or the IP address of the user device if IP-authentication was used to authenticate the user.

Examples

```
-> show unp router-auth users

UserName           Destination   User-Group Intf-Name/      Auth  Auth   LoginTime

output definitions

UserName Displays either the IP address or Captive Portal user name for the learned user device.
IP-Address The IP address of the user device.
Destination IP-Network The destination IP network address for the user device.
Access Timestamp The date and time the user device accessed the network.
Interface-Name/VLAN The name of the IP interface and VLAN associated with the user device.
User-Group The name of the router authentication user group condition that matches the user device traffic.
Authentication-Type Indicates whether the user device attempted Captive Portal or IP-based authentication.
Authentication-Status Indicates whether the user device passed or failed authentication.
Session-Time Remaining (sec) The amount of time remaining for the users login session.

Related Commands

unp router-auth user flush Performs a MAC address flush of the specified router domain authentication users.

MIB Objects

N/A
**unp classification port**

Defines a Port classification rule for the specified UNP profile. If the UNP port or link aggregate on which the device traffic is received matches the port or link aggregate defined for the rule, the specified profile is applied to the device.

```
unp classification {port chassis/slot/port1|-port2] | linkagg [agg_id|-agg_id2]} [vlan-tag vlan_id | outer_vlan_id:inner_vlan_id] [profile1 profile_name [profile2 profile_name] [profile3 profile_name]]
```

```
no unp classification {port chassis/slot/port1|-port2] | linkagg agg_id} [profile1] [profile2] [profile3]
```

### Syntax Definitions

- `chassis/slot/port[-port2]`:
  The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).

- `[agg_id|-agg_id2]`:
  The link aggregate ID for a specific UNP link aggregate. Use a hyphen to specify a range of IDs (5-10).

- `vlan_id`:
  A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.

- `outer_vlan_id:inner_vlan_id`:
  An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.

- `profile_name`:
  The name of an existing UNP profile.

### Defaults

By default, no classification rules are defined for a UNP profile.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of this command to remove the Port rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.

- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.

- The Port rule configured for the specified profile is applied only to traffic learned on the specified UNP port or link aggregate.

- If a range of ports is specified with this command, any non-UNP ports within the range are skipped.
When configuring a Port classification rule, specify an optional VLAN tag before specifying the UNP for which the rule will classify traffic.

Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:

- Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
- Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.
- When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (profile1 first, profile2 second, and profile3 third) to determine which profile is applied to the matching traffic.

Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).

If a VLAN ID tag is specified with this command, the UNP is applied only to tagged packets that are received on the specified UNP port and that contain the VLAN ID tag.

Untagged packets are only classified using the specified UNP port; the VLAN ID tag is ignored if it is specified with this rule.

A Port classification rule can be combined with a MAC address rule and IP address rule to configure a port-based binding rule.

**Examples**

```
-> unp classification port 1/1/5 vlan-tag 100 profile1 unp1-vxlan profile2 unp2-spb
-> unp classification port 1/1/10-15 profile1 unp1-vlan profile2 unp2-spb
-> no unp classification port 1/1/5 profile2
-> no unp classification port 1/1/5

-> unp classification linkagg 5 profile1 unp1-vlan profile2 unp2-vxlan profile3 unp3-spb
-> unp classification linkagg 6-10 vlan-tag 10:20 profile1 unp1-vlan
-> no unp classification linkagg 5 profile3
-> no unp classification linkagg 5
```

**Port + MAC address + IP address binding rule example:**

```
-> unp classification mac-address 00:11:22:33:44:55 ip-address 10.0.0.20 mask 255.255.0.0 port 1/1/15 profile1 Pr3
-> no unp classification mac-address 00:11:22:33:44:55 ip-address 10.0.0.20 mask 255.255.0.0 port 1/1/15
```

**Port + MAC address binding rule example:**

```
-> unp classification mac-address 00:11:22:33:44:55 port 1/1/5 profile1 Pr1
-> no unp classification mac-address 00:11:22:33:44:55 port 1/1/5
```

**Port + IP address binding rule example:**

```
-> unp classification ip-address 10.0.0.20 mask 255.255.0.0 port 1/1/10 profile1 Pr2
-> no unp classification ip-address 10.0.0.20 mask 255.255.0.0 port 1/1/10
```
**Release History**

access guardian commands

unp classification domain

Defines a Domain ID classification rule for the specified UNP profile. If the port or link aggregate on which the device traffic is received belongs to a Domain ID that matches the Domain ID defined for the rule, the specified profile is applied to the device.

```
unp classification domain domain_id [vlan-tag vlan_id | outer_vlan_id:inner_vlan_id] {profile1 profile_name [profile2 profile_name] [profile3 profile_name]}
no unp classification domain domain_id [profile1] [profile2] [profile3]
```

Syntax Definitions

- `domain_id` A domain ID number.
- `vlan_id` A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
- `outer_vlan_id:inner_vlan_id` An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
- `profile_name` The name of an existing UNP profile.

Defaults

By default, no classification rules are defined for a UNP profile.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

Usage Guidelines

- Use the `no` form of this command to remove the domain ID rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
- When configuring a Port classification rule, specify and optional VLAN tag before specifying the UNP for which the rule will classify traffic.
- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
  - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.

When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (profile1 first, profile2 second, and profile3 third) to determine which profile is applied to the matching traffic.

Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).

If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets received on a UNP port associated with the Domain ID and tagged with the specified VLAN ID.

Untagged packets are only classified using the specified domain ID; the VLAN ID tag is ignored if it is specified with this rule.

A domain ID classification rule can be combined with a MAC address rule and an IP address rule to configure a domain-based binding rule.

**Examples**

```
-> unp classification domain 10 profile1 unp1-vlan
-> unp classification domain 20 vlan-tag 100 profile1 unp1-vxlan profile2 unp2-spb profile3-vlan
-> no unp classification domain 20 profile3
-> no unp classification domain 20
```

Domain ID + MAC address + IP address binding rule example:

```
-> unp classification mac-address 00:11:22:33:44:55 ip-address 10.0.0.20 mask 255.255.0.0 domain 10 profile1 Pr3
-> no unp classification mac-address 00:11:22:33:44:55 ip-address 10.0.0.20 mask 255.255.0.0 domain 10
```

**Release History**

Release 8.3.1; command was introduced.

**unp classification mac-address**

Defines a MAC address classification rule for the specified UNP. If the source MAC address of the device traffic matches the MAC address defined for the rule, the specified UNP is applied to the device. An optional VLAN ID tag parameter is available to specify a VLAN tag that device traffic must also match in addition to the source MAC address.

```
unp classification mac-address mac_address [domain domain_id] [vlan-tag vlan_id | outer_vlan_id:inner_vlan_id] [profile1 profile_name [profile2 profile_name] [profile3 profile_name]]
```

```
no unp classification mac-address mac_address [profile1] [profile2] [profile3]
```

### Syntax Definitions

- **mac_address**
  - MAC address (e.g., 00:00:39:59:f1:0c).

- **domain_id**
  - An existing customer domain ID to which this rule will apply.

- **vlan_id**
  - A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.

- **outer_vlan_id:inner_vlan_id**
  - An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.

- **profile_name**
  - The name of an existing UNP profile.

### Defaults

### Usage Guidelines

- Use the **no** form of this command to remove the MAC address rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.

- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
• When configuring a MAC address classification rule, specify and optional VLAN tag and/or an optional customer domain ID before specifying the UNP for which the rule will classify traffic.

• When a customer domain ID is configured for this rule, the rule is applied only to traffic received on UNP ports that are associated with the same domain ID. All UNP ports are automatically assigned to customer domain 0 at the time the port is configured as a UNP port.

• Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
  – Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
  – Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.
  – When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (profile1 first, profile2 second, and profile3 third) to determine which profile is applied to the matching traffic.

• Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).

• If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets containing the specified source MAC address and the VLAN ID tag.

• Untagged packets are only classified using the specified MAC address; the VLAN ID tag is ignored if it is configured for this rule.

Examples

-> unp classification mac-address 00:11:22:33:44:55 profile1 CustA
-> unp classification mac-address 00:2a:95:00:00:01 vlan-tag 200 profile1 VNP1

**unp classification mac-oui**

Defines a MAC address Organizationally Unique Identifier (OUI) classification rule for the specified UNP profile. If the OUI of the source MAC address of the device traffic matches the OUI defined for the rule, the specified profile is applied to the device.

```
unp classification mac-oui mac_oui [vlan-tag vlan_id | outer_vlan_id:inner_vlan_id] {profile1 profile_name [profile2 profile_name] [profile3 profile_name]}

no unp classification mac-oui mac_oui [profile1] [profile2] [profile3]
```

### Syntax Definitions

- **mac_oui**: The first three octets of the MAC address (for example, e8:39:35 is the OUI of MAC address e8:39:35:10:fe:11).
- **vlan_id**: A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
- **outer_vlan_id:inner_vlan_id**: An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
- **profile_name**: The name of an existing UNP profile.

alaDaUNPMacOuiRuleProfile3
**unp classification mac-range**

Defines a MAC address range classification rule for the specified UNP. If the source MAC address of the device traffic matches any address within the range of MAC addresses, the specified UNP is applied to the device. An optional VLAN ID tag parameter is also available to specify a VLAN tag that device traffic must also match in addition to the source MAC address.

```
unp classification mac-range low_mac_address high_mac_address [domain domain_id] [vlan-tag vlan_id | outer_vlan_id:inner_vlan_id] {profile1 profile_name [profile2 profile_name] [profile3 profile_name]}
```

```
no unp classification mac-range low_mac_address high_mac_address [profile1] [profile2] [profile3]
```

### Syntax Definitions

- `low_mac_address`: MAC address that defines the low end of the range (e.g., 00:00:39:59:f1:00).
- `high_mac_address`: MAC address that defines the high end of the range (e.g., 00:00:39:59:f1:90).
- `domain_id`: An existing customer domain ID to which this rule will apply.
- `vlan_id`: A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
- `outer_vlan_id:inner_vlan_id`: An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
- `profile_name`: The name of an existing UNP profile.

Usage Guidelines

- Use the no form of this command to remove the MAC address range rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.

- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.

- When configuring a MAC address range classification rule, specify and optional VLAN tag and/or an optional domain ID before specifying the UNP for which the rule will classify traffic.

- When a customer domain ID is configured for this rule, the rule is applied only to traffic received on UNP ports that are associated with the same domain ID. All UNP ports are automatically assigned to customer domain 0 at the time the port is configured as a UNP port.

- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
  - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
  - Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.
  - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (profile1 first, profile2 second, and profile3 third) to determine which profile is applied to the matching traffic.

- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).

- If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets containing a source MAC address within the specified range and the VLAN ID tag.

- Untagged packets are only classified using the specified MAC address range; the VLAN ID tag is ignored if it is specified with this rule.

Examples

-> unp classification mac-range 00:11:22:33:44:66 00:11:22:33:44:77 profile1 CustA
-> unp classification mac-range 00:11:22:33:44:99 00:11:22:33:45:01 vlan-tag 20 profile1 vNP1
-> unp classification mac-range 00:11:22:33:44:01 00:11:22:33:44:20 domain 2 profile1 CustB
-> unp classification mac-range 00:11:22:33:44:01 00:11:22:33:44:20 domain 3 vlan-tag 200 profile1 unp1-vlan profile2 unp2-spb profile3 unp3-vxlan

unp classification ip-address

Defines an IP network address classification rule for the specified UNP. If the source IP address of the device traffic matches the IP address defined for the rule, the specified UNP is applied to the device. An optional VLAN ID tag parameter is available to specify a VLAN tag that device traffic must also match in addition to the source IP address.

```
unp classification ip-address ip_address mask subnet_mask [domain domain_id] [vlan-tag vlan_id | outer_vlan_id:inner_vlan_id] [profile1 profile_name [profile2 profile_name] [profile3 profile_name]]
```

```
no unp classification ip-address ip_address mask subnet_mask [profile1] [profile2] [profile3]
```

**Syntax Definitions**

- `ip_address` IPv4 network address (e.g., 10.0.0.0, 171.15.0.0, 196.190.254.0).

- `subnet_mask` An IP address mask to identify the IP subnet for the interface (supports class-less masking).

- `domain_id` An existing customer domain ID to which this rule will apply.

- `vlan_id` A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.

- `outer_vlan_id:inner_vlan_id` An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.

- `profile_name` The name of an existing UNP profile.

**Defaults**

By default, no classification rules are defined for a UNP.

| supported      | Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes           | Yes              | Yes            | Yes       | Yes    | Yes   |      |

**Usage Guidelines**

- Use the `no` form of this command to remove an IP network address rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
• Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.

• When configuring an IP network address classification rule, specify and optional VLAN tag and/or an optional customer domain ID before specifying the UNP for which the rule will classify traffic.

• When a customer domain ID is configured for this rule, the rule is applied only to traffic received on UNP ports that are associated with the same domain ID. All UNP ports are automatically assigned to customer domain 0 at the time the port is configured as a UNP port.

• Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
  – Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
  – Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.
  – When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (profile1 first, profile2 second, and profile3 third) to determine which profile is applied to the matching traffic.

• Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).

• If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets containing the specified source IP address and the VLAN ID tag.

• Untagged packets are only classified using the specified IP address; the VLAN ID tag is ignored if it is specified with this rule.

**Examples**

-> unp classification ip-address 10.1.1.1 mask 255.255.255.0 profile1 CustA
-> unp classification ip-address 20.1.1.1 mask 255.255.0.0 profile1 vNP1 profile2 vNP2
-> unp classification ip-address 50.1.1.1 mask 255.255.255.0 vlan-tag 300 profile1 CustB
-> unp classification ip-address 60.1.1.1 mask 255.255.0.0 domain 2 profile1 unp2 profile2 unp3-spb
-> unp classification ip-address 70.1.1.1 mask 255.255.0.0 domain 1 vlan-tag 20:30 profile1 vNP3
-> no unp classification ip-address 20.1.1.1 mask 255.255.0.0 profile2
-> no unp classification ip-address 10.1.1.1 mask 255.255.255.0

**unp classification vlan-tag**

Defines a VLAN tag classification rule for the specified UNP. If the VLAN ID tag of the device traffic matches the VLAN ID defined for the rule, the specified UNP is applied to the device.

```
unp classification vlan-tag {vlan_id | outer_vlan_id:inner_vlan_id} [domain domain_id] {profile1 profile_name [profile2 profile_name] [profile3 profile_name]}
```

```
no unp classification vlan-tag vlan_id [profile1] [profile2] [profile3]
```

**Syntax Definitions**

- **vlan_id**
  A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.

- **outer_vlan_id:inner_vlan_id**
  An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.

- **domain_id**
  An existing customer domain ID to which this rule will apply.

- **profile_name**
  The name of an existing UNP profile.

**Defaults**

By default, no classification rules are defined for a UNP.

<table>

**Usage Guidelines**

- Use the **no** form of this command to remove a VLAN tag rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.

- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.

- When configuring a VLAN tag classification rule, specify an optional customer domain ID before specifying the name of the UNP for which the rule will classify traffic.
When a customer domain ID is configured for this rule, the rule is applied only to traffic received on UNP ports that are associated with the same domain ID. All UNP ports are automatically assigned to customer domain 0 at the time the port is configured as a UNP port.

Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:

- Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
- Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.
- When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (Profile1 first, Profile2 second, and Profile3 third) to determine which profile is applied to the matching traffic.

Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).

Untagged packets are not classified with this rule.

**Examples**

```
-> unp classification vlan-tag 400 profile1 CustA
-> unp classification vlan-tag 10:20 domain 3 profile1 unp1 profile2 spb1
-> no unp classification vlan-tag 10:20 profile1
-> no unp classification vlan-tag 400
```

- `alaDaUNPCustDomainVlanTagRuleProfile3`
**unp classification lldp med-endpoint**

Defines a Link Layer Discovery Protocol (LLDP) classification rule for the specified UNP profile. This rule is used specifically for IP phones and OmniAccess Stellar Access Point (AP) devices.

```
unp classification lldp med-endpoint {ip-phone | access-point} {profile1 profile_name} {profile2 profile_name}] [profile3 profile_name]
```

```
no unp classification lldp med-endpoint {ip-phone | access-point} {profile1} {profile2} {profile3}
```

**Syntax Definitions**

- **ip-phone** When LLDP TLVs from an IP phone are detected, apply the specified profile to the IP phone.
- **access-point** When LLDP TLVs from an OmniAccess Stellar AP are detected, apply the specified profile to the AP device.
- **profile_name** The name of an existing UNP profile.

**Defaults**

By default, no classification rules are defined for a UNP profile.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove the rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.

- There is a built-in LLDP classification rule for access points that is assigned to built-in profiles named “defaultWLANProfile” and “defaultWLANAccessProfile”. This rule facilitates the automatic detection
and classification of OmniAccess Stellar APs that are connected to UNP bridge and access ports. Consider the following regarding the built-in LLDP access point rule:

- The rule cannot be removed from the switch configuration. However, the profile designation for the rule can be changed.
- The rule does not appear in the configuration snapshot for the switch unless the profile assignment for the rule was changed.
- When Stellar APs are detected on a UNP bridge port, they are classified and assigned to the VLAN that is mapped to the built-in “defaultWLANProfile”. This VLAN is advertised to the AP device as the management VLAN for untagged AP traffic.
- When Stellar APs are detected on a UNP access port, they are classified and assigned to the Shortest Path Bridging (SPB) service that is mapped to the built-in “defaultWLANAccessProfile”. This service is advertised to the AP device as the management service for untagged AP traffic.

- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.

- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
  - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
  - Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.
  - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (profile1 first, profile2 second, and profile3 third) to determine which profile is applied to the matching traffic.

- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).

**Examples**

- `unp classification lldp med-endpoint ip-phone profile1 unp1-vlan profile2 unp2-vlan`
- `no unp classification lldp med-endpoint ip-phone profile2`
- `no unp classification lldp med-endpoint ip-phone`

- `unp classification lldp med-endpoint access-point profile1 defaultWLANProfile`
- `no unp classification lldp med-endpoint access-point`
- `unp classification lldp med-endpoint access-point`  
  ERROR: BUILT-IN Access-Point LLDP Rule cannot be deleted

alaDaUNPEndPoinProfile1  
alaDaUNPEndPoinProfile2  
alaDaUNPEndPoinProfile3
**unp classification authentication-type**

Defines an Authentication Type classification rule for the specified UNP profile. If the type of authentication applied to the device traffic matches the authentication type defined for the rule, the specified profile is applied to the device.

```
unp classification authentication-type {none | mac [fail] | 802.1x [fail]} [vlan-tag vlan_id]
outer_vlan_id:inner_vlan_id {profile1 profile_name [profile2 profile_name] [profile3 profile_name]}
```

```
no unp classification authentication-type {none | mac [fail] | 802.1x [fail]} [profile1 profile2 profile3]
```

### Syntax Definitions

- **none**
  - No authentication was applied to the device.

- **mac**
  - The device was successfully authenticated through MAC authentication.

- **802.1x**
  - The device was successfully authenticated through 802.1X authentication.

- **fail**
  - Optional parameter to specify failed MAC or 802.1X authentication.

- **vlan_id**
  - A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.

- **outer_vlan_id:inner_vlan_id**
  - An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.

- **profile_name**
  - The name of an existing UNP profile.

### Defaults

By default, no classification rules are defined for a UNP profile.

<table>
<thead>

<td>Yes</td>
</tr>
</tbody>
</table>
Usage Guidelines

- Use the **no** form of this command to remove the rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.

- The optional **fail** parameter is used only in combination with the **mac** or **802.1x** parameter. When configured, the device is checked for a failed MAC or 802.1X authentication condition to determine whether or not the profile is applied.

- When the **fail** parameter is not specified (the default), the device is checked for a successful MAC or 802.1X authentication condition to determine whether or not the profile is applied.

- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.

- When configuring this type of classification rule, specify an optional VLAN tag before specifying the UNP profile name for which the rule will classify traffic.

- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
  - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
  - Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.
  - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.

- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).

- If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets containing the specified authentication type *and* the VLAN ID tag.

- Untagged packets are only classified using the specified authentication type; the VLAN ID tag is ignored if it is specified with this rule.

Examples

```plaintext

**unp classification-rule**

Configures an extended classification rule name and assigns a precedence value to the specified name. This type of rule defines a list of rule conditions, all of which a device must match to be classified into the UNP profile associated with the extended rule name.

```
unp classification-rule rule_name [precedence precedence_value] [profile1 profile_name] [profile2 profile_name] [profile3 profile_name]
```

```
no unp classification-rule rule_name [profile1] [profile2] [profile3]
```

### Syntax Definitions

- **rule_name**
  - The name to associate with the extended classification rule.

- **precedence_value**
  - The precedence level to assign to the extended rule. The valid range is 1–255 (1 = lowest, 255 = highest). Precedence value 255 is reserved for Device Profiling classification rules.

- **profile_name**
  - The name of an existing UNP profile to assign to the extended rule.

### Defaults

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>precedence_value</td>
<td>1</td>
</tr>
<tr>
<td>profile_name</td>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of this command to remove the extended rule from the switch configuration or to remove a UNP profile name assigned to the rule.

- The precedence value specified with this command is used to determine precedence among extended classification rules.

- Extended rules take precedence over all other UNP classification rules (individual rules and binding rule combinations).

- Although some individual classification rules can be combined to form a binding rule, a binding rule is not assigned a rule name and does not have a configurable precedence value. In addition, extended classification rules offer more rule combinations than binding rules.
The following extended classification rules are automatically defined when Device Profiling is enabled for the switch (these rules cannot be removed):

- devProfPrinter
- devProfWindows
- devProfIP-Phone
- devProfWireless-Router
- devProfSmartPhone/PDA/Tablets

**Examples**

- `-> unp classification-rule ext-r1`
- `-> unp classification-rule ext-r1 profile1 UNP1 profile2 UNP2`
- `-> unp classification-rule ext-r1 precedence 250`

- `-> unp classification-rule ext-r2`
- `-> unp classification-rule ext-r2 precedence 255`
ERROR: Precedence 255 is reserved for Device Profiling
- `-> unp classification-rule ext-r2 precedence 254`
- `-> unp classification-rule ext-r2 profile1 UNP3 profile2 UNP4 profile3 UNP5`

- `-> no unp classification-rule ext-r1 profile1 UNP1`
- `-> no unp classification-rule ext-r1`

- `-> no unp classification-rule ext-r2 profile1 UNP4`
- `-> no unp classification-rule ext-r2`

- alaDaUNPClassifRuleProfile3
unp classification-rule port

Defines a Port rule condition for the specified extended classification rule name.

unp classification-rule rule_name {port chassis/slot/port1[-port2] | linkagg agg_id}

no unp classification-rule rule_name {port | linkagg}

**Syntax Definitions**

- **rule_name**
  - The name of an extended classification rule to which the rule condition is assigned.

- **chassis/slot/port1[-port2]**
  - The chassis ID, slot, and port number (3/1/1) for a specific port. Use a hyphen to specify a range of ports (3/1/1-8).

- **agg_id**
  - Link aggregate ID.

**Defaults**

By default, no conditions are defined when an extended classification rule is created.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the no form of this command to remove the Port rule condition from the specified extended classification rule name.

- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

**Examples**

- `unp classification-rule ext-r1 port 1/1/10`
- `no unp classification-rule ext-r1 port`

- `unp classification-rule ext-r2 port 1/1/1-5`
- `no unp classification-rule ext-r2 port`

- `unp classification-rule ext-r3 linkagg 10`
- `unp classification-rule ext-r3 linkagg`
**Release History**

Release 8.1.1; command was introduced.

**Related Commands**

- `unp classification-rule`  
  Configures an extended classification rule name and associated profile.

- `show unp classification-rule`  
  Displays the UNP extended classification rule configuration.

**MIB Objects**

- `alaDaUNPClassifRuleTable`  
- `alaDaUNPClassifRuleName`  
- `alaDaUNPClassifRulePort`
unp classification-rule domain

Defines a domain ID rule condition for the specified extended classification rule name.

```
unp classification-rule rule_name domain domain_id
no unp classification-rule rule_name domain
```

### Syntax Definitions

- `rule_name`: The name of an extended classification rule to which the rule condition is assigned.
- `domain_id`: Domain ID number.

### Defaults

By default, no conditions are defined when an extended classification rule is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of this command to remove the Domain ID rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

### Examples

```
-> unp classification-rule ext-r1 domain-id GRP1
-> no unp classification-rule ext-r1 domain-id
```

### Release History

- Release 8.1.1; command was introduced.
- Release 8.3.1; `group-id` parameter changed to `domain`. 
Related Commands

**unp classification-rule**  
Configures an extended classification rule name and associated profile.

Displays the UNP extended classification rule configuration.

MIB Objects

alaDaUNPClassifRuleTable
alaDaUNPClassifRuleName
alaDaUNPClassifRuleCustomerDomain
**unp classification-rule mac-address**

Defines a MAC address, rule condition for the specified extended classification rule name.

**unp classification-rule** *rule_name* mac-address *mac_address*

**no unp classification-rule** *rule_name* mac-address

**Syntax Definitions**

- **rule_name**: The name of an extended classification rule to which the rule condition is assigned.
- **mac_address**: MAC address (e.g., 00:00:39:59:f1:0c).

**Defaults**

By default, no conditions are defined when an extended classification rule is created.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- Configuring all three types of MAC rules (MAC address, MAC OUI, and MAC address range) for the same extended classification rule is not allowed. Only one type of MAC rule is configurable for a given extended classification rule.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

**Examples**

- `-> unp classification-rule ext-r1 mac-address 00:11:22:33:44:55`
- `-> no unp classification-rule ext-r1 mac-address`

**Release History**

Release 8.1.1; command was introduced.

**unp classification-rule mac-oui**

Defines a MAC OUI rule condition for the specified extended classification rule name.

```
unp classification-rule rule_name mac-oui mac_oui
no unp classification-rule rule_name mac-oui
```

### Syntax Definitions

- **rule_name**: The name of an extended classification rule to which the rule condition is assigned.
- **mac_address**: MAC address (e.g., 00:00:39:59:f1:0c).
- **mac_oui**: The Organizationally Unique Identifier (OUI) of the MAC address. The OUI is the first three octets of the MAC address (for example, e8:39:35 is the OUI of MAC address e8:39:35:10:fe:11).

### Defaults

By default, no conditions are defined when an extended classification rule is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

unp classification-rule mac-range

Defines a MAC address range rule condition for the specified extended classification rule name.

unp classification-rule rule_name mac-range low_mac_address high_mac_address

no unp classification-rule rule_name mac-range

Syntax Definitions

rule_name The name of an extended classification rule to which the rule condition is assigned.

low_mac_address MAC address that defines the low end of the range (for example, 00:00:39:59:f1:00).

high_mac_address MAC address that defines the high end of the range (for example, 00:00:39:59:f1:90).

Defaults

By default, no conditions are defined when an extended classification rule is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

unp classification-rule ip-address

Defines an IP network address rule condition for the specified extended classification rule name.

```plaintext
unp classification-rule rule_name ip-address ip_address mask subnet_mask
no unp classification-rule rule_name ip-address
```

**Syntax Definitions**

- **rule_name**: The name of an extended classification rule to which the rule condition is assigned.
- **ip_address**: IPv4 network address (e.g., 10.0.0.0, 171.15.0.0, 196.190.254.0).
- **subnet_mask**: An IP address mask to identify the IP subnet for the interface (supports class-less masking).

**Defaults**

By default, no conditions are defined when an extended classification rule is created.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

unp classification-rule vlan-tag

Defines a VLAN tag rule condition for the specified extended classification rule name.

```
unp classification-rule rule_name vlan-tag [vlan_id | outer_vlan_id:inner_vlan_id]
no unp classification-rule vlan-tag
```

**Syntax Definitions**

- **rule_name**: The name of an extended classification rule to which the rule condition is assigned.
- **vlan_id**: A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets. Specify a value of zero to classify untagged traffic.
- **outer_vlan_id:inner_vlan_id**: An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.

**Defaults**

By default, no conditions are defined when an extended classification rule is created.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

unp classification-rule lldp med-endpoint

Defines an LLDP rule condition for the specified extended classification rule name. This rule condition is specifically to detect IP phone TLVs or OmniAccess Stellar Access Point (AP) TLVs.

```
unp classification-rule rule_name lldp med-endpoint {ip-phone | access-point}
no unp classification-rule rule_name lldp med-endpoint ip-phone
```

### Syntax Definitions

- **rule_name**: The name of an extended classification rule to which the port condition is assigned.
- **ip-phone**: When LLDP TLVs from an IP phone are detected, apply the specified profile to the IP phone.
- **access-point**: When LLDP TLVs from an OmniAccess Stellar AP are detected, apply the specified profile to the AP device.

### Defaults

By default, no conditions are defined when an extended classification rule is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the `no` form of this command to remove the rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.
- When using the `access-point` option to define this rule condition, make sure “defaultWLANProfile” is assigned as the profile for the specified extended classification rule name.

### Examples

```
-> unp classification-rule ext-r1 lldp med-endpoint ip-phone
-> no unp classification-rule ext-r1 lldp med-endpoint ip-phone

-> unp classification-rule AP profile1 defaultWLANProfile
-> unp classification-rule AP lldp med-endpoint access-point
-> no unp classification-rule AP lldp med-endpoint access-point
```
**Release History**

Release 8.1.1; command was introduced.
Release 8.4.1.R02; **access-point** parameter added.

**Related Commands**

- **unp classification-rule** Configures an extended classification rule name and associated profile.
- **show unp classification-rule** Displays the UNP extended classification rule configuration.

**MIB Objects**

- alaDaUNPClassifRuleTable

**unp classification-rule authentication-type**

Defines an authentication type rule condition for the specified extended classification rule name.

```
unp classification-rule rule_name authentication-type {none | mac [fail] | 802.1x [fail]}
no unp classification-rule rule_name authentication-type
```

**Syntax Definitions**

- `rule_name` - The name of an extended classification rule to which the port condition is assigned.
- `none` - No authentication was applied to the device.
- `mac` - The device was successfully authenticated through MAC authentication.
- `802.1x` - The device was successfully authenticated through 802.1X authentication.
- `fail` - Optional parameter to specify failed MAC or 802.1X authentication.

**Defaults**

By default, no conditions are defined when an extended classification rule is created.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>6900</th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove the rule condition from the specified extended classification rule name.

- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

- The optional `fail` parameter is used only in combination with the `mac` or `802.1x` parameter. When configured, the device is checked for a failed MAC or 802.1X authentication condition to determine whether or not the profile is applied.

- When the `fail` parameter is not specified (the default), the device is checked for a successful MAC or 802.1X authentication condition to determine whether or not the profile is applied.

**Examples**

```
-> unp classification-rule ext-r1 authentication-type 8021x
-> unp classification-rule ext-r1 authentication-type 8021X fail
```
Access Guardian Commands

unp classification-rule device-type

Defines a Device Profiling rule condition for the specified extended classification rule name.

```
unp classification-rule rule_name device-type device_name
no unp classification-rule rule_name device-type
```

### Syntax Definitions

- **rule_name**: The name of an extended classification rule to which the rule condition is assigned.
- **device_name**: The name of a device type to which the condition is assigned.

### Defaults

By default, no conditions are defined when an extended classification rule is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.

- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

- The following extended classification rules are automatically defined when Device Profiling is enabled for the switch (the device type for these rules cannot be removed):
  - devProfPrinter
  - devProfWindows
  - devProfIP-Phone
  - devProfWireless-Router
  - devProfSmartPhone/PDA/Tablets

### Examples

```
-> unp classification-rule ext-rl device-type Printer
-> no unp classification-rule ext-rl device-type
-> no unp classification-rule devProfPrinter device-type
```
ERROR: Device-type cannot be modified on built-in rules

**Release History**

Release 8.5R2; command was introduced.

**unp user-role**

Configures a user-defined role name and assigns a precedence value to the specified name. This type of role is used to define a list of conditions and a QoS policy list name. If the current context of a device matches all of the role conditions, then the policy list is applied to that device.

```
unp user-role role_name [precedence precedence_value]

no unp user-role role_name
```

**Syntax Definitions**

- `role_name` The name to associate with the user-defined role.
- `precedence_value` The precedence level to assign to the user-defined role. The valid range is 1–255 (1 = lowest, 255 = highest).

**Defaults**

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>precedence_value</td>
<td>1</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 V72/C32</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove the user-defined role from the switch configuration.
- The precedence value specified with this command is used to determine precedence among other user-defined roles.
- Every time the user context changes for a device, all the user-defined roles are checked to see if there is a role that matches the current user context.
- Only one user-defined role per user is allowed because only one QoS policy list per user is allowed.

**Examples**

```
-> unp user-role role1
-> unp user-role role2 precedence 255
-> no unp user-role role2
```
Release History

Release 8.1.1; command was introduced.

Related Commands

**unp user-role policy-list**

Assigns a QoS policy list to the specified user-defined role name. When the context of a user device matches all the user-defined role conditions, the policy list associated with the role is applied to the device.

`unp user-role role_name policy-list list_name`

`no unp user-role role_name policy-list`

---

**Syntax Definitions**

- `role_name`: The name of a user-defined role to which the QoS policy list is assigned.
- `list_name`: The name of an existing QoS policy list.

---

**Defaults**

By default, no QoS policy list is assigned to a user-defined role.

---

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove the profile name as a condition for the specified user-defined role.
- If the user-defined role name specified with this command does not exist, the switch will automatically create the role name and associate the profile with that name.
- The profile name specified with this command must already exist in the switch configuration.

**Examples**

```
-> unp user-role role1 profile1 unp1
-> unp user-role role2 profile1 unp1 profile2 unp2
-> unp user-role role3 profile1 unp1 profile2 unp2 profile3 unp3
-> no unp user-role role1 profile1
-> no unp user-role role2 profile1 profile2
-> no unp user-role role3 profile3
```

**Release History**

Release 8.1.1; command was introduced.
**Related Commands**

- **unp user-role**
  Configures the name and precedence for a user-defined role.

- **unp user-role policy-list**
  Assigns a QoS policy list to a user-defined role.

- **show unp user-role**
  Displays the user-defined role configuration for the switch.

**MIB Objects**

- alaDaUNPUserRoleTable
- alaDaUNPUserRoleName
- alaDaUNPUserRoleProfile1
- alaDaUNPUserRoleProfile2
- alaDaUNPUserRoleProfile3
unp user-role authentication-type

Defines an authentication type condition for the specified user-defined role name.

```
unp user-role role_name authentication-type {none | mac [fail] | 802.1x [fail]}
```

```
no unp user-role role_name authentication-type
```

**Syntax Definitions**

- **role_name**: The name of a user-defined role.
- **none**: No authentication was applied to the device.
- **mac**: The device was successfully authenticated through MAC authentication.
- **802.1x**: The device was successfully authenticated through 802.1X authentication.
- **fail**: Optional parameter to specify failed MAC or 802.1X authentication.

**Defaults**

By default, the authentication type condition is not configured for a user-defined role.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>Supported</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove the authentication type as a condition for the specified user-defined role.

- If the user-defined role name specified with this command does not exist, the switch will automatically create the role name and associate the profile with that name.

- The optional `fail` parameter is used only in combination with the `mac` or `802.1x` parameter. When configured, the device is checked for a failed MAC or 802.1X authentication condition to determine whether or not the user role (policy list associated with the user role) is applied to the device.

- When the `fail` parameter is not specified (the default), the device is checked for a successful MAC or 802.1X authentication condition to determine whether or not the user role (policy list associated with the user role) is applied to the device.

**Examples**

```
-> unp user-role role1 authentication-type 8021x
-> unp user-role role1 authentication-type 8021X fail
```

**unp user-role cp-status-post-login**

Configures the Captive Portal (CP) post login status as a condition for the specified user-defined role name.

```plaintext
unp user-role role_name cp-status-post-login
no unp user-role role_name cp-status-post-login
```

**Syntax Definitions**

`role_name` The name of an existing user-defined role.

**Defaults**

By default, the CP post login status condition is not configured for a user-defined role.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove the CP post login status as a condition for the specified user-defined role.
- When this condition is active for a user-defined role, the switch will check to see if a device is in a CP post login state before applying the QoS policy list associated with the user-defined role.

**Examples**

```plaintext
-> unp user-role role1 cp-status-post-login
-> no unp user-role role1 cp-status-post-login
```

**Release History**

Release 8.1.1; command was introduced.
Related Commands

- **unp user-role**  Confirms the name and precedence for a user-defined role.
- **unp user-role policy-list**  Assigns a QoS policy list to a user-defined role.
- **show unp user-role**  Displays the user-defined role configuration for the switch.

MIB Objects

- alaDaUNPUserRoleTable
- alaDaUNPUserRoleName
- alaDaUNPUserRolePostLoginStatus
**unp restricted-role policy-list**

Assigns an explicit QoS policy list to an implicit restricted role. When the switch assigns a user device to one of the restricted role states (unauthorized, Quarantine Manager, or Captive Portal pre-login), the explicit QoS policy list is applied instead of the built-in policy list associated with the restricted role.

```
unp restricted-role {unauthorized | qmr | cp-prelogin} policy-list list_name
```

```
nounp restricted-role {unauthorized | qmr | cp-prelogin} policy-list
```

**Syntax Definitions**

- `list_name`: The name of an existing QoS policy list.
- `unauthorized`: Applies the explicit policy list to unauthorized devices.
- `qmr`: Applies the explicit policy list to quarantined devices. *Not supported on the OmniSwitch 6360.*
- `cp-prelogin`: Applies the explicit policy list to devices in a Captive Portal pre-login state.

**Defaults**

By default, the built-in policy list associated with the restricted role state.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

</tr>
<tr>
<td>9900</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove the explicit QoS policy list assignment.
- An explicit QoS policy list overrides the built-in policy list associated with the restricted role state.
- When the explicit policy list assignment is removed, the switch reverts back to using the built-in policy list associated with the restricted role state.

**Examples**

- `unp restricted-role unauthorized policy-list unauth1`
- `unp restricted-role qmr policy-list quarantined1`
- `unp restricted-role cp-prelogin policy-list cplogin1`
- `no unp restricted-role unauthorized`
- `no unp restricted-role qmr`
- `no unp restricted-role cp-prelogin`
**Release History**

Release 8.1.1; command was introduced.

**Related Commands**

- **policy list**
  - Configures a QoS policy list.

- **show unp restricted-role**
  - Displays the UNP restricted role policy list configuration.

**MIB Objects**

- alaDaUNPRstrctedRoleTable
- alaDaUNPRstrctedRoleType
- alaDaUNPRstrctedRolePolicyList
captive-portal mode

Configures the Captive Portal mode of operation.

captive-portal mode {internal | internal dhcp [ip-lease-time seconds] [ip-renew-time seconds] [ip-rebinding-time seconds] | external}

no captive-portal mode internal

**Syntax Definitions**

- **internal** Internal Captive Portal (Web server is on the switch. A VLAN change requires a port bounce).
- **internal dhcp** Internal DHCP Captive Portal (Web server is on the switch. IP address from Captive Portal subnet is leased to the client; VLAN change does not require a port bounce).
- **ip-lease-time seconds** The amount of time an IP address is leased to a client. The valid range is 20–120 seconds.
- **ip-renew-time seconds** The amount of time until a client with a leased IP address attempts to renew the leased IP address.
- **ip-rebinding-time seconds** The amount of time until a client attempts to obtain a new leased IP address (occurs when renew attempts fail).
- **external** Not supported; an external Captive Portal operation is provided through the OmniSwitch Bring Your Own Device (BYOD) solution.

**Defaults**

By default, the mode is set to internal Captive Portal. When the internal DHCP Captive Portal mode is selected without specifying any optional parameter values, the following default values are set:

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>ip-lease-time</td>
<td>30 seconds</td>
</tr>
<tr>
<td>ip-renew-time</td>
<td>15 seconds</td>
</tr>
<tr>
<td>ip-rebinding-time</td>
<td>26 seconds</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>
**Usage Guidelines**

- Use the `no` form of this command to revert the Captive Portal mode back to the default internal mode (no internal DHCP functionality).

- Only the internal and internal DHCP Captive Portal modes (Web server on the switch) are configurable for the switch. An external Captive Portal operation is provided through interaction with the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) as part of the OmniSwitch BYOD solution.

- When a device is classified into a UNP profile that has the Captive Portal authentication attribute enabled, the device is placed into a Captive Portal pre-login state. The Captive Portal mode determines how a device in the pre-login state obtains an IP address, the necessary DNS information, and whether a port bounce is required after a VLAN change.
  
  - If the internal Captive Portal mode (the default) is active, the device can directly contact a DHCP server to get an IP address and DNS information. A port bounce action is required if the initial VLAN assignment for the device is changed.
  
  - If the internal DHCP Captive Portal mode is active, the switch provides basic DHCP functionality to assign the device an IP address with a short-term lease from the Captive Portal subnet (10.123.0.0) and provide the necessary DNS information. A port bounce action is not required if the initial VLAN assignment for the device is changed.

- Consider the following when changing the internal DHCP parameter values:
  
  - The `ip-renew-time` is 50% of the `ip-lease-time`.
  
  - The `ip-rebinding-time` is 87.5% of the `ip-lease-time`.
  
  - When only the `ip-lease-time` is changed, the `ip-renew-time` and `ip-rebinding-time` are automatically recalculated based on the noted percentages.
  
  - Make sure the `ip-renew-time` specified is less than the `ip-rebinding-time`.
  
  - Make sure the `ip-rebinding-time` specified falls between the `ip-renew-time` and `ip-lease-time`.

**Examples**

```plaintext
-> captive-portal mode internal-dhcp
-> captive-portal mode internal-dhcp ip-least-time 120
-> captive-portal mode internal
-> no captive-portal mode internal
```

**Release History**

Release 8.5R4; command was introduced.

**Related Commands**

- `show captive-portal configuration`

  Displays the global Captive Portal configuration for the switch.

**MIB Objects**

- `alaDaCPortalGlobalConfig`
- `alaDaCPortalMode`
- `alaDaCPortalDHCPLeaseTime`
- `alaDaCPortalDHCPRenewTime`
- `alaDaCPortalDHCPRebindingTime`
captive-portal name

Configures an IP address or Fully Qualified Domain Name (FQDN) as a redirect URL to use for Captive Portal.

`captive-portal name {ip_address | domain_name}`

`no captive-portal name`

**Syntax Definitions**

- `ip_address` The IPv4 network address (e.g., 171.15.0.0) to which HTTP traffic is redirected.
- `domain_name` An FQDN (up to 32 characters) to which HTTP traffic is redirected.

**Defaults**

By default, the Captive Portal redirect name is set to “captive-portal.com”.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to revert the URL name back to the default “captive-portal.com”.

- Use this command to change the Captive Portal redirect URL name to match the common name (cn) used by the public certificate on the switch. Matching these two names prevents a certificate warning message caused when these names do not match.

**Note.** Do not preface the redirect URL domain name with `https://`; the switch automatically adds `https://` to the beginning of the domain name.

- When a device is classified into a UNP profile that has the Captive Portal authentication attribute enabled, the device is placed into a Captive Portal pre-login state. In this state, the device can contact a DHCP server to get an IP address and get the DNS server address.

- Initial HTTP requests received from a user device are responded to with the Captive Portal redirect name. The user device contacts the DNS server to resolve the redirect name and receives the Captive Portal IP address. Requests are then sent to the Captive Portal IP address that is mapped internally to the OmniSwitch web server, which then presents login Web pages to the user device.

- Make sure the DNS server configuration reflects the same Captive Portal name and IP address that is configured for the OmniSwitch.
Examples

-> captive-portal name cert-name
-> captive-portal name "20.2.2.1"
-> no captive-portal name

Release History

Release 8.1.1; command was introduced.

Related Commands

captive-portal ip-address
Configures the internal Captive Portal IP address for the switch.

show captive-portal configuration
Displays the global Captive Portal configuration for the switch.

MIB Objects

alaDaCPortalGlobalConfig
alaDaCPortalRedirectUrlName
captive-portal ip-address

Configures the internal Captive Portal IP address for the switch.

captive-portal ip-address ip_address

**Syntax Definitions**

*ip_address* IPv4 network address (e.g., 10.0.0.0, 171.15.0.0, 196.190.254.0).

**Defaults**

By default, the internal Captive Portal IP address is set to 10.123.0.1.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- If the default 10.123.0.0 subnet is already in use, then use this command to change the Captive Portal IP address to another 10.x.0.0 subnet (only the second octet of the Captive Portal IP address can be changed).

- When a device is classified into a UNP profile that has the Captive Portal authentication attribute enabled, the device is placed into a Captive Portal pre-login role. In this state, the device can contact a DHCP server to get an IP address and get the DNS server address.

- Initial HTTP requests received from a user device are responded to with the Captive Portal redirect name. The user device contacts the DNS server to resolve the redirect URL name and receives the Captive Portal IP address. Requests are then sent to the Captive Portal IP address that is mapped internally to the OmniSwitch web server, which then presents login web pages to the user device.

- Make sure the DNS server configuration reflects the same Captive Portal name and IP address that is configured for the OmniSwitch.

**Examples**

```
-> captive-portal ip-address 10.255.0.20
```

**Release History**

Release 8.1.1; command was introduced.
**Related Commands**

- **captive-portal name**
  - Configures the name of the redirect URL that is used for accessing a public certificate.

- **show captive-portal configuration**
  - Displays the global Captive Portal configuration for the switch.

**MIB Objects**

- `alaDaCPortalIpAddress`
captive-portal success-redirect-url

Configures the URL of a specific site to which a user is redirected after a successful Captive Portal authentication.

```
captive-portal success-redirect-url redirect_url
no captive-portal success-redirect-url
```

**Syntax Definitions**

`redirect_url` The redirect URL (up to 63 characters).

**Defaults**

By default, no success redirect URL is configured.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Model</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900</th>
<th>9900</th>
</tr>
</thead>
<tbody>
<tr>
<td>V72/C32</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>X48C6/T48C6/X48C4E/V48C8/C32E/T24C2/X24C2</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use the `no` form of this command to remove the success redirect URL from the Captive Portal global configuration.

**Examples**

```
-> no captive-portal success-redirect-url
```

**Release History**

Release 8.1.1; command was introduced.

**Related Commands**

- `show captive-portal configuration` Displays the global Captive Portal configuration for the switch.

**MIB Objects**

- `alaDaCPortalGlobalConfig`
- `alaDaCPortalSuccRedirectUrl`
captive-portal proxy-server-port

Configures the proxy server port to use for Captive Portal.

captive-portal proxy-server-port proxy_port

no captive-portal proxy-server-port

Syntax Definitions

proxy_port The HTTP proxy port number. The valid range is 1024–49151.

Defaults

By default, the proxy server port number is set to 8080.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the `no` form of this command to set the proxy port number back to the default (8080).
- This command overwrites the existing proxy port number for the switch.
- The proxy port number only requires changing if the proxy port used is not 80 or 8080.

Examples

- `-> captive-portal proxy-server-port 1200`
- `-> no captive-portal proxy-server-port`

Release History

Release 8.1.1; command was introduced.
Related Commands

show captive-portal configuration

Displays the global Captive Portal configuration for the switch.

MIB Objects

alaDaCPortalGlobalConfig

captive-portal retry-count

Configures the number of times a device can try to login before Captive Portal determines that authentication for that device has failed.

captive-portal retry-count retries

Syntax Definitions

retries The number of login attempts allowed. The valid range is 1–99.

Defaults

By default, the retry count is set to 3.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

No access page is sent to devices that exceed the number of login retries allowed.

Examples

-> captive-portal retry-count 5

Release History

Release 8.1.1; command was introduced.

Related Commands

show captive-portal configuration Displays the global Captive Portal configuration for the switch.

MIB Objects

alaDaCPortalGlobalConfig
alaDaCPortalRetryCnt
captive-portal authentication-pass

Configures a global authentication pass policy. This type of policy is applied to all devices successfully authenticated through the Captive Portal process. Each policy can specify a QoS policy list and UNP profile name to assign to the authenticated devices.

```
captive-portal authentication-pass {policy-list list_name | profile profile_name | profile-change {enable | disable}}
```

```
no captive-portal authentication-pass {policy-list | profile}
```

### Syntax Definitions

- **list_name**: The name of a QoS policy list to apply to the authenticated user device.
- **profile_name**: The name of an existing UNP profile.
- **enable**: Enables the profile change operation. Authenticated devices are assigned to the specified profile name.
- **disable**: Disables the profile change operation. Authenticated devices are not assigned to a new profile.

### Defaults

By default, no policy list name or UNP profile name is specified for the global Captive Portal configuration.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6</th>
<th>9900 X48C4E/V48C8/C32E/T24C2</th>
<th>9900 X24C2</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

### Usage Guidelines

- Use the **no** form of this command to remove the Captive Portal authentication pass policy from the global Captive Portal configuration.

- When the **profile-change** parameter is enabled, the profile initially assigned to the Captive Portal users is changed to the profile derived through successful Captive Portal authentication. The QoS policy list associated with the new profile is applied to the authenticated users.

- When a profile change occurs, the new profile may assign a different VLAN to the authenticated device. This new VLAN assignment is functional only after a port bounce or pause timer operation is completed. Existing Bring Your Own Device (BYOD) global commands are leveraged to configure the port bounce and pause timer values.

- If the new UNP profile assigned also has Captive Portal authentication enabled, the process is not started again. The results from the initial Captive Portal authentication process are used instead.
- When the `profile-change` parameter is disabled, the QoS policy list name returned from the RADIUS server or the list name specified with this command is applied instead.

- The QoS policy list to apply to Captive Portal authenticated devices is derived through one of the following methods:
  - The policy list name returned from the RADIUS server.
  - The policy list name specified with this command for the global Captive Portal configuration.
  - The policy list name associated with the UNP profile returned from the RADIUS server.
  - The policy list name associated with the UNP profile specified with this command for the global Captive Portal configuration.

- A policy list name or a UNP profile name returned from the RADIUS server takes precedence over the policy list name or UNP profile name configured through this command.

**Examples**

```
-> captive-portal authentication-pass policy-list list1
-> captive-portal authentication-pass profile unp1-vlan profile-change enable
-> captive-portal authentication-pass profile-change disable
-> no captive-portal authentication-pass policy-list
-> no captive-portal authentication-pass profile
```

**Release History**

Release 8.1.1; command was introduced.
Release 8.2.1; `edge-profile` and `edge-profile-change` parameters added.
Release 8.3.1; `edge-profile` and `edge-profile-change` parameters changed to `profile` and `profile-change`.

**Related Commands**

- **captive-portal authentication-pass domain**
  - Configures a domain specific authentication pass policy to determine the QoS policy list or UNP profile name to apply to authenticated devices. This type of policy overrides the global Captive Portal configuration.

- **show captive-portal configuration**
  - Displays the global Captive Portal configuration for the switch.

**MIB Objects**

- `alaDaCPortalGlobalConfig`
- `alaDaCPortalPolicyListName`
- `alaDaCPortalUNPProfile`
- `alaDaCPortalUNPProfileChange`
captive-portal authentication-pass domain

Configures a domain specific authentication pass policy. This type of policy is applied to all devices within the specified domain that were successfully authenticated through the Captive Portal process.

```
captive-portal authentication-pass realm {prefix | suffix} domain domain_name {policy-list list_name | profile profile_name | profile-change {enable | disable}}
```

```
no captive-portal authentication-pass [realm {prefix | suffix} domain domain_name]
```

**Syntax Definitions**

- **prefix**
  Specifies a prefix domain name (for example, domain_name/user).
- **suffix**
  Specifies a suffix domain name (for example, user@domain_name)
- **domain_name**
  The domain name for the user device.
- **list_name**
  The name of a QoS policy list to apply to the authenticated user device.
- **profile_name**
  The name of an existing UNP profile.
- **enable**
  Enables the profile change operation. Authenticated devices are assigned to the specified profile name.
- **disable**
  Disables the profile change operation. Authenticated devices are not assigned to a new profile.

**Defaults**

By default, no domain specific authentication pass policy is configured for the Captive Portal process.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the **no** form of this command to remove the domain specific authentication pass policy from the Captive Portal configuration.
- Use the **realm prefix domain** or **realm suffix domain** parameter to apply the authentication policy list or UNP profile based on the domain name of the Captive Portal authenticated user device.
- If the **profile-change** parameter is enabled, the profile initially assigned to the Captive Portal user is changed to the profile derived through successful Captive Portal authentication. The QoS policy list associated with the new profile is then applied to the authenticated users.
- When a profile change occurs, the new profile may assign a different VLAN to the authenticated device. This new VLAN assignment is functional only after a port bounce or pause timer operation is performed.
completed. Existing Bring Your Own Device (BYOD) global commands are leveraged to configure the port bounce and pause timer values.

- If the new profile assigned to the user also has Captive Portal authentication enabled, the process is not started again. The results from the initial Captive Portal authentication process are used instead.

- If the profile-change parameter is disabled, then the QoS policy list name returned from the RADIUS server or the list name specified through the global (non-domain specific) Captive Portal configuration is applied.

- The QoS policy list to apply to Captive Portal authenticated devices is derived through one of the following methods:
  - The policy list name returned from the RADIUS server.
  - The policy list name specified with this command or through the global Captive Portal configuration.
  - The policy list name associated with the UNP profile returned from the RADIUS server.
  - The policy list name associated with the UNP profile specified with this command or through the global Captive Portal configuration.

- A policy list name or a UNP profile name returned from the RADIUS server takes precedence over the policy list name or UNP profile name configured through this command.

**Examples**

```
-> captive-portal authentication-pass realm prefix domain asia-pacific policy-list list2
-> captive-portal authentication-pass realm suffix domain north-america profile unp2 profile-change enable
-> no captive-portal authentication-pass realm suffix domain north-america
```

**Release History**

Release 8.1.1; command was introduced.
Release 8.2.1; edge-profile and edge-profile-change parameters added.
Release 8.3.1; edge-profile and edge-profile-change parameters changed to profile and profile-change.

**Related Commands**

- **captive-portal authentication-pass**
  Configures a global authentication pass policy. This type of policy is applied to all devices successfully authenticated through the Captive Portal process.

- **show captive-portal configuration**
  Displays the global Captive Portal configuration for the switch.

captive-portal-profile

Configures a Captive Portal profile that is assigned to a UNP profile. This type of profile defines Captive Portal configuration options that are applied to devices classified into the assigned UNP profile. This command page describes the base command (`captive-portal-profile profile_name`) along with the other command keywords that are used to configure profile attributes.

```plaintext
captive-portal-profile profile_name
   [aaa-profile aaa_profile_name]
   [success-redirect-url redirect_url]
   [retry-count retries]
   [authentication-pass [realm {prefix | suffix} domain domain_name] {policy-list list_name | profile profile_name | profile-change {enable | disable}}]

no captive-portal-profile profile_name
```

**Syntax Definitions**

- **profile_name**: The name to assign to the Captive Portal profile (up to 32 characters).
- **aaa_profile_name**: The name of an authentication, authorization, and accounting (AAA) profile to associate with the Captive Portal profile.
- **redirect_url**: A URL (up to 63 characters) to which user devices are redirected after successful Captive Portal authentication.
- **retries**: The number of login attempts allowed. The range is 1–99.
- **realm prefix**: Specifies a prefix domain name (for example, `domain_name/user`).
- **realm suffix**: Specifies a suffix domain name (for example, `user@domain_name`).
- **domain_name**: The domain name for the user device.
- **list_name**: The name of a QoS policy list to apply to the authenticated user device.
- **profile_name**: The name of an existing UNP profile.
- **enable**: Enables the profile change operation. Authenticated devices are assigned to the specified profile name.
- **disable**: Disables the profile change operation. Authenticated devices are not assigned to a new profile.

**Defaults**

<table>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the **no** form of this command to remove the Captive Portal profile from the switch configuration.

- Creating a Captive Portal profile name with the base command (**captive-portal-profile profile_name**) is not required to configure a profile attribute value. If the profile name does not exist, the switch will automatically create the name specified when the attribute is configured. For example, the **unp captive-portal-profile cp-prof1 retry-count 5** command will create the “cp-prof1” profile if it does not already exist in the switch configuration.

- When a Captive Portal profile is applied to a UNP profile, the parameter values defined in the profile override the global Captive Portal parameter values configured for the switch.

- A Captive Portal profile is applied only when Captive Portal authentication is enabled for the UNP profile. If there is no Captive Portal profile associated with a UNP profile, then the global Captive Portal configuration is applied.

- Assigning an AAA profile to a Captive Portal profile defines specific AAA configuration options (such as RADIUS servers and RADIUS client attributes) that are used for Captive Portal authentication. If there is no AAA profile assigned, then the global AAA configuration is used.

- AAA profiles are configured using the **aaa profile** command. See the “AAA Commands” chapter in the **OmniSwitch AOS Release 8 CLI Reference Guide** for more information.

Examples

```
-> captive-portal-profile cp-p1
-> captive-portal-profile cp-p1 aaa-profile aaa_p1
-> captive-portal-profile cp-p1 authentication-pass realm prefix domain asia-pacific policy-list list1
-> no captive-portal-profile cp-p1 aaa-profile aaa_p1
-> no captive-portal-profile cp-p1

-> captive-portal-profile cp-p2 retry-count 5
-> captive-portal-profile cp-p2 authentication-pass profile ep-1
-> captive-portal-profile cp-p2 authentication-pass profile-change enable
-> captive-portal-profile cp-p2 authentication-pass profile-change disable
-> no captive-portal-profile cp-p2 authentication-pass profile
-> no captive-portal-profile cp-p2
```

Release History

Release 8.1.1; command was introduced.
Release 8.2.1; **edge-profile** and **edge-profile-change** parameters added.
Release 8.3.1; **edge-profile** and **edge-profile-change** parameters changed to **profile** and **profile-change**.

captive-portal customization

Enables or disables the use of custom Web pages for Captive Portal authentication. When customization is enabled, Captive Portal presents Web pages stored in the “/flash/switch/captive_portal/custom_files/” directory on the switch. When customization is disabled, Captive Portal presents Web pages stored in the “/flash/switch/captive_portal/release_files/” directory on the switch.

captive-portal customization {enable | disable}

Syntax Definitions

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>Displays custom web pages for Captive Portal authentication.</td>
</tr>
<tr>
<td>disable</td>
<td>Displays default web pages for Captive Portal authentication.</td>
</tr>
</tbody>
</table>

Defaults

By default, the web pages provided on the switch are displayed.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

• To create custom Web pages, create a folder in the same path as the “release_files” folder and name the new folder “custom_files” (for example “/flash/switch/captive_portal/custom_files/”). Next, copy the “assets” and “templates” folders found under “/flash/switch/captive_portal/release_files/” to the “custom_files” folder. Modify the contents in the copied folders to create custom Web pages.

• The “release_files” folder is overwritten each time the switch reboots, so **DO NOT** modify the files in this folder for custom use.

• The folders "assets" and "templates" under the /flash/switch/captive_portal/custom_files/ directory are used to create and display Web pages to Captive Portal users when the switch reboots or at runtime when Captive Portal customization is enabled for the switch, if the “custom_files” folder exists.

• Anything in the custom "assets" folder is statically served by the internal Web server on the switch whenever they are requested. These pages are typically .css files, javascript files, or the acceptable use policy and are linked to files in the custom "templates" folder.

• The custom "templates" folder contains the Web pages that are dynamically served to users depending on the Captive Portal state of each user. The file names in this folder must not be changed. The login form field names and form action in these pages must not be changed. The variables in these pages, as denoted by "<?=$'(name)?>”, are substituted in place by the internal Web server.
Examples

- captive-portal customization enable
- captive-portal customization disable

Release History
Release 8.1.1; command was introduced.

Usage Guidelines

- Currently only the internal Captive Portal mode (Web server on the switch) is configurable for the switch. An external Captive Portal operation is provided through interaction with the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) as part of the OmniSwitch BYOD solution.
- The parameter values configured and applied through a Captive Portal profile override any values set through the global Captive Portal configuration. A Captive Portal profile is associated with a UNP profile and is applied to devices classified into that profile.

Examples

-> show captive-portal configuration
Captive Portal Global Configuration:

- Captive Portal Mode = Internal
- DHCP Parameters:
  - DHCP Lease Time = 30
  - DHCP Renew Time = 15
  - DHCP Rebinding Time = 26
- Captive Portal IP address = 10.123.0.1
- Captive Portal Redirect String = captive-portal.com
- Captive Portal Success Redirect URL =
- Captive Portal Proxy Server Port = 8080
- Captive Portal Retry Count = 3
- Captive Portal Global Auth Policy List =
- Captive Portal Page Customization = Disable
- Captive Portal Profile Name =
Captive Portal Profile Change = Disable

Domain Specific Policy Lists:

<table>
<thead>
<tr>
<th>Domain</th>

<td>Enable</td>
</tr>
</tbody>
</table>

### output definitions

- **Captive Portal Mode**
  The Captive Portal mode of operation. Only the internal and internal DHCP modes (Web server on the OmniSwitch) are supported at this time. Configured through the `captive-portal mode` command.

- **DHCP Parameters**:
  A list of DHCP parameter values that are applied when the internal DHCP mode is active. These fields display “N/A” when the internal DHCP mode is not active. Configured through the `captive-portal mode` command.

  - **DHCP Lease Time**
    The amount of time an IP address is leased to a DHCP client.

  - **DHCP Renew Time**
    The amount of time, in seconds, until an attempt is made to renew the leased IP address (50% of the DHCP Lease Time).

  - **DHCP Rebinding Time**
    The amount of time until an attempt is made to obtain a new IP leased address (87.5% of the DHCP Lease Time).

- **Captive Portal IP address**
  The internal Captive Portal IP address for the switch. Configured through the `captive-portal ip-address` command.

- **Captive Portal Redirect String**
  The name of the redirect URL that is used for accessing a public certificate. Configured through the `captive-portal name` command.

- **Captive Portal Success Redirect URL**
  The URL of a specific site to which a user is redirected after a successful Captive Portal authentication. Configured through the `captive-portal success-redirect-url` command.

- **Captive Portal Proxy Server Port**
  The proxy server port to use for Captive Portal. Configured through the `captive-portal proxy-server-port` command.

- **Captive Portal Retry Count**
  The number of times a device can try to login before Captive Portal determines that authentication for that device has failed. Configured through the `captive-portal retry-count` command.

- **Captive Portal Global Auth Policy List**
  The name of a QoS policy list for the global Captive Portal configuration. The specified list is applied to each device that passes Captive Portal authentication. Configured through the `captive-portal authentication-pass` command.

- **Captive Portal Page Customization**
  Whether or not (Enable or Disable) customized Captive Portal pages are presented to the user.

- **Captive Portal Profile Name**
  The name of a UNP profile for the global Captive Portal configuration. The specified profile is only applied to Captive Portal authenticated devices when the Captive Portal profile change option is enabled. Configured through the `captive-portal authentication-pass` command.

- **Captive Portal Profile Change**
  The status of profile change (Enable or Disable). When enabled, the profile initially assigned to the Captive Portal user is changed to the profile specified through the Captive Portal profile name option. Configured through the `captive-portal authentication-pass` command.
### output definitions

Captive Portal Mode

The Captive Portal mode of operation. Only internal mode (Web server on the OmniSwitch) is supported at this time.

Captive Portal AAA Profile Name

The name of an authentication, authorization, and accounting (AAA) profile associated with the Captive Portal profile.

Captive Portal Success Redirect URL

The URL of a specific site to which a user is redirected after a successful Captive Portal authentication.

Captive Portal Retry Count

The number of times a device can try to login before Captive Portal determines that authentication for that device has failed.

Captive Portal Global Auth Policy List

The name of a QoS policy list for the global Captive Portal configuration. The specified list is applied to each device that passes Captive Portal authentication.

Captive Portal Profile Name

The name of a UNP profile for the global Captive Portal configuration. The specified profile is only applied to Captive Portal authenticated devices when the Captive Portal profile change option is enabled.

Captive Portal Profile Change

The status of profile change (Enable or Disable). When enabled, the profile initially assigned to the Captive Portal user is changed to the profile specified through the Captive Portal profile name option.

Domain Specific Policy Lists:

A list of Captive Portal domain specific policies. The policy list is applied when the domain for a Captive Portal authenticated device matches the domain criteria associated with the list. Domain specific policies take precedence over the global Captive Portal settings.

</tbody>
</table>

Domain

The domain name associated with a domain specific policy.

Realm

The realm of the domain name (prefix or suffix) associated with a domain specific policy. The realm identifies the domain name as a prefix (domain-name/user) or as a suffix (user@domain-name).

Policy List

The name of the QoS policy list that is applied when the domain of a Captive Portal authenticated user device matches the domain criteria associated with the list name.

Profile Name

The name of the UNP profile that is applied when the domain of a Captive Portal authenticated user device matches the domain criteria associated with the profile name.

Profile Change

The status of profile change (Enable or Disable) for the associated domain name. When enabled, the initial profile assigned to the Captive Portal device is changed to the profile specified through the profile change option associated with the domain name.
Release History

Release 8.1.1; command was introduced.

Related Commands

captive-portal-profile

Configures a Captive Portal profile.

show captive-portal configuration

qmr quarantine path

Specifies the URL for a remediation server. This information is used by the Quarantine Manager and Remediation (QMR) application. A quarantined user is redirected to a remediation server to correct the condition that put the user into a quarantined state.

qmr quarantine path url

no qmr quarantine path

Syntax Definitions

url

The URL for the QMR remediation server.

Defaults

By default, no URL is configured.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th>Platform</th>
<th>6360</th>
<th>6465</th>
<th>6560</th>
<th>6570M</th>
<th>6860</th>
<th>6860N</th>
<th>6865</th>
<th>6900</th>
<th>6900 V72/C32</th>
<th>6900 X48C6/T48C6</th>
<th>9900</th>
</tr>
</thead>
<tbody>

<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Use the no form of the command to remove the remediation server URL from the configuration.
- Make sure to add the corresponding IP address for the remediation server to the QMR list of exception subnets, configured through the qmr quarantine allowed-name command.
- Configuring the URL and adding the server IP address to the allowed list is required to redirect quarantined MAC addresses to the remediation server.
- Redirecting quarantined users learned on UNP access ports for remediation is not supported; users learned on UNP bridge ports can be redirected for remediation.

Examples

-> qos quarantine path www.remediate.com
-> no quarantine path

Release History

Release 8.1.1; command was introduced.
### Related Commands

- **qmr quarantine page**
  Configures whether or not QMR will send a “Quarantined” page to a user when a remediation server is not configured.

- **qmr quarantine allowed-name**
  Configures a list of IP addresses to which a restricted quarantined user can access.

- **qmr quarantine custom-proxy-port**
  Configures the HTTP proxy port number that is used to redirect traffic from a quarantined device.

- **qos quarantine mac-group**
  Configures the name of the Quarantine MAC address group.

- **show qmr**
  Displays the Access Guardian QMR configuration.

- **show quarantine mac group**
  Displays the contents of the QoS quarantined MAC address group.

### MIB Objects

- **alaDaQMRGlobalConfig**

Usage Guidelines

A “Quarantined” page is only sent if a remediation server path was not configured for QMR. Note that even if the remediation server is not active, QMR will not send the page as long as there is a value set for the remediation server path.

Examples

- `qmr quarantine page enable`
- `qmr quarantine page disable`

Release History

Release 8.1.1; command was introduced.
Related Commands

qmr quarantine path
  Specifies the URL for a remediation server.
qmr quarantine allowed-name
  Configures a list of IP addresses to which a restricted quarantined user can access.
qmr quarantine custom-proxy-port
  Configures the HTTP proxy port number that is used to redirect traffic from a quarantined device.
qos quarantine mac-group
  Configures the name of the Quarantine MAC address group.
show qmr
  Displays the Access Guardian QMR configuration.
show quarantine mac group
  Displays the contents of the QoS quarantined MAC address group.

MIB Objects

alaDaQMRGlobalConfig
  alaDaQMRPage
qmr quarantine allowed-name

Configures a list of IP addresses that a restricted quarantined user is allowed to access.

```
qmr quarantine allowed-name name ip-address ip_address [ip-mask ip_mask]
no qmr quarantine allowed-name name
```

**Syntax Definitions**

- **name**: Specify a name to assign to the allowed IP network address.
- **ip_address**: An IPv4 network address (for example, 10.0.0.0, 171.15.0.0, or 196.190.254.0).
- **ip_mask**: A valid IP address mask for the allowed IP network address (for example, 255.0.0.0 or 255.255.0.0)

**Defaults**

By default, no IP addresses are configured as QMR allowed addresses.

<table>
<thead>
<tr>
<th>parameter</th>
<th>default</th>
</tr>
</thead>
<tbody>
<tr>
<td>ip_mask</td>
<td>IP address class</td>
</tr>
</tbody>
</table>

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- Use the `no` form of this command to remove an IP address from the allowed list.
- A maximum of two allowed IP addresses is supported.
- Make sure the IP address of the QMR remediation server is configured as an allowed IP address. A quarantined user is redirected to a remediation server to correct the condition that put the user into a quarantined state.

**Examples**

```
-> qmr quarantine allowed-name server2 ip-address 10.0.0.20 ip-mask 255.0.0.0
-> no qmr quarantine allowed-name server2
```
**Release History**

Release 8.1.1; command was introduced.

**Related Commands**

- **qmr quarantine path**
  Specifies the URL for a remediation server.

- **qmr quarantine page**
  Configures whether or not QMR will send a “Quarantined” page to a user when a remediation server is not configured.

- **qmr quarantine custom-proxy-port**
  Configures the HTTP proxy port number that is used to redirect traffic from a quarantined device.

- **qos quarantine mac-group**
  Configures the name of the Quarantine MAC address group.

- **show qmr**
  Displays the Access Guardian QMR configuration.

- **show quarantine mac group**
  Displays the contents of the QoS quarantined MAC address group.

**MIB Objects**

- alaDaQMRAllowedTable
- alaDaQMRAllowedName
- alaDaQMRAllowedIpAddr
- alaDaQMRAllowedIpMask
**qmr quarantine custom-proxy-port**

Configures the HTTP proxy port number used in the Web browser configuration of a host device. Quarantine Manager uses this information when trapping HTTP packets from a quarantined device and redirecting traffic from the device for remediation.

```
qmr quarantine custom-proxy-port proxy_port
no qmr quarantine custom-proxy-port
```

**Syntax Definitions**

*proxy_port* 
The HTTP proxy port number. The valid range is 1025–65535.

**Defaults**

By default, the redirect proxy port number is set to 8080.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use the `no` form of this command to set the proxy port number back to 8080 (the default).

**Examples**

- `-> qmr quarantined custom-proxy-port 8887`
- `-> no qmr quarantined custom-proxy-port`

**Release History**

Release 8.1.1; command was introduced.
**Related Commands**

- `qmr quarantine path` Specifies the URL for a remediation server.
- `qmr quarantine page` Configures whether or not QMR will send a “Quarantined” page to a user when a remediation server is not configured.
- `qmr quarantine allowed-name` Configures a list of IP addresses to which a restricted quarantined user can access.
- `qos quarantine mac-group` Configures the name of the Quarantine MAC address group.
- `show qmr` Displays the Access Guardian QMR configuration.
- `show quarantine mac group` Displays the contents of the QoS quarantined MAC address group.

**MIB Objects**

- `alaDaQMRGlobalConfig`
- `alaDaQMRCustomHttpProxyPort`
show qmr

Displays the Quarantine Manager and Remediation (QMR) configuration for the switch.

Usage Guidelines

QMR is an OmniSwitch application that interacts with the OmniVista Quarantine Manager (OVQM) application to restrict the network access of quarantined clients and provide a remediation path for such clients to regain their network access. This command displays the OmniSwitch QMR configuration.

Examples

-> show qmr

Quarantine Mac Group Name : Quarantine,
Allowed IP Subnets : IT-HD 135.254.1.10 /255.255.255.248,
                     oss-lan 10.1.1.0 /255.255.255.0,
                     rem-ser 135.254.200.0 /255.255.255.0,
Custom Proxy port : 8888,
Quarantine Path : www.remediation-server.alu.com,
Quarantine Page : enabled,

output definitions

<table>
<thead>
<tr>
<th>Quarantine MAC Group Name</th>
<th>Allowed IP Subnets</th>
</tr>
</thead>
<tbody>
<tr>
<td>The name of the QoS Quarantine MAC address group. Configured through the <code>qos quarantine mac-group</code> command.</td>
<td>A list of IP network addresses that devices can still access while in a quarantined state. Configured through the <code>qmr quarantine allowed-name</code> command.</td>
</tr>
</tbody>
</table>
output definitions

**Custom Proxy port**  The HTTP proxy port number used for redirection of HTTP traffic from quarantined devices. Configured through the `qmr quarantine custom-proxy-port` command.

**Quarantine Path**  The URL of a remediation server to which a device is redirected when the device is quarantined. Configured through the `qmr quarantine path` command.

**Quarantine Page**  Whether or not QMR sends a “Quarantined” page notification to a quarantined user when there is no remediation server configuration. Configured through the `qmr quarantine page` command.

---

**Release History**

Release 8.1.1; command was introduced.

**Related Commands**

*show quarantine mac group*  Displays the contents of the QoS Quarantine MAC address group.

**MIB Objects**

alaQoSConfigTable

- alaDaQMRPath
- alaDaQMRPage
**show quarantine mac group**

Displays the contents of the QoS Quarantine MAC address group.

```
show quarantine mac group
```

**Syntax Definitions**

N/A

**Defaults**

N/A

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

The QoS MAC address group contains the MAC addresses of clients that the OmniVista Quarantine Manager (OVQM) application has quarantined. This command displays the quarantined MAC addresses that belong to this group.

**Examples**

```
-> show quarantine mac group
Group Name : Quarantine,
Number of MACs quarantined : 6,
00:00:00:11:11:1b,
00:00:00:11:11:1a,
00:00:00:11:11:19,
00:00:00:11:11:18,
00:00:00:11:11:17,
00:00:00:11:11:16,
```

**Release History**

Release 8.1.1; command was introduced.

**Related Commands**

`qos quarantine mac-group` Configures the name of the QoS Quarantine MAC address group.

**MIB Objects**

N/A
zeroconf mdns admin-state

Enables or disables the Multicast DNS (mDNS) relay on the switch.

zeroconf mdns admin-state {enable | disable}

Syntax Definitions

<table>
<thead>
<tr>
<th>enable</th>
<th>Enable the mDNS relay on the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>disable</td>
<td>Disable the mDNS relay on the switch.</td>
</tr>
</tbody>
</table>

Defaults

The mDNS relay feature is disabled by default.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Support</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Usage Guidelines

- Apple devices use mDNS (multicast DNS) as the underlying protocol for Bonjour exchanges.
- When mDNS relay is disabled on the switch, mDNS packets are handled in the same manner as conventional packets.

Example

-> zeroconf mdns admin-state enable
-> zeroconf mdns admin-state disable

Release History

Release 8.4.1 R02; command introduced.
Related Commands

**zeroconf ssdp admin-state**  Enables or disables the Simple Service Discovery Protocol (SSDP) relay on the switch.

**show zeroconf**  Displays the zero configuration for the switch.

MIB Objects

*alaZeroConfMdnsAdminStatus*
zeroconf ssdp admin-state

Enables or disables the Simple Service Discovery Protocol (SSDP) relay on the switch. SSDP relay enables the OmniSwitch to allow non-Apple devices to discover services with minimal configuration by the administrator.

```
zeroconf ssdp admin-state {enable | disable}
```

**Syntax Definitions**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>Enables the SSDP relay on the switch.</td>
</tr>
<tr>
<td>disable</td>
<td>Disables the SSDP relay on the switch.</td>
</tr>
</tbody>
</table>

**Defaults**

The SSDP relay feature is disabled by default.

**Platforms Supported**

This command is supported on the following OmniSwitch platforms:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
