
Data center operators are facing significant challenges on how to manage virtual network elements in conjunction with the physical network. OmniVista 2500 VMM unifies physical and virtual infrastructures providing network operators with a comprehensive view into a complete end-to-end network from monitoring to advance provisioning operations. This enables error-free network administration operations and simplifies the deployment of new value-added services.

The OmniVista 2500 VMM, an optional component for the OmniVista 2500 Network Management System (NMS), addresses new operational requirements and new capabilities required to ensure consistent, unified management and operation simplification for the new virtualized infrastructure deployed in data centers. The OmniVista 2500 VMM offers a comprehensive end-to-end solution that unifies physical and virtual infrastructures into a single pane of glass for network operators.

Using the OmniVista 2500 VMM, network operators can monitor and control virtual networks, ensuring that virtual network policies are consistently and automatically applied across the infrastructure. This enables error-free network operations for the IT organization and simplifies deployment of value-added services such as live virtual machine migration which includes VMware VMotion, Microsoft Hyper-V Live Migration and Citrix XenMotion.

The OmniVista 2500 VMM contributes to a comprehensive manageability solution that, in conjunction with the OmniVista 2500 NMS Enterprise Edition, spans the Alcatel-Lucent Enterprise routing and switching network portfolio.

</table>
| **Vendor agnostic architecture for virtualization** | • Supports and interfaces with leading enterprise virtualization vendors, VMware vCenter, Microsoft Server 2012 Hyper-V, Hyper-V 2012 and Citrix XenServer  
• Adaptive, extensible architecture, reducing vendor lock-in  
• Flexible approach supporting a variety of virtualization platforms, hypervisors and distributed virtual switches |
| **Virtual network resource visibility and inventory** | • Automatically discovers and constantly updates the complete virtual network inventory (virtual machine name, MAC, IP address, host information, network devices IP address, VLAN ID and multi-tenant)  
• Offers a complete, single pane of glass for end-to-end physical and virtual networks |
| **Simplified tracking and troubleshooting capabilities with Locator** | • Provides correlated information and a single pane of view on connectivity between virtual and physical networks  
• Real time and historical location tracking of virtual machines  
• Provides an end-to-end view of the virtual and physical network infrastructure |
| **Automated network provisioning** | • Establishes universal network profile (UNP) definition and its extensive configuration  
• Manages universal network profile assignment to network infrastructure to ensure consistent service delivery  
• Eliminates the need to constantly communicate between network infrastructure and virtualization team changes related to configuration changes  
• Streamlines configuration and related workflows to reduce human errors  
• Simplifies troubleshooting operations and reduces downtime  
• Ensures consistent profiles across data centers |
| **Event and audit logs** | • Maintains a log of all OmniVista 2500 VMM events and automatically records all critical actions  
• Provides historical records for UNPs and critical events  
• Allows network administrators to be quickly informed and keeps track of all critical configuration changes |
| **Reduced IT learning curve and training costs** | • OmniVista 2500 VMM runs as optional module fully integrated with the OmniVista 2500 NMS  
• Integrates with existing OmniVista 2500 NMS application and management tools, relying on existing cohesive workflow with a single touch  
• Reduces IT operations complexity and costs by consolidating management tools  
• Offers flexibility for IT department for optimal server OS and performance  
• No software add-ons required on hypervisor platforms, reducing capital expenditure (CAPEX) and operating expense (OPEX) costs related to deployment  
• No configuration change required on virtualization environments, preserving IT workload, reduce IT efforts and eliminating coordination across teams |

FULLY INTEGRATED WITH LEADING ENTERPRISE VIRTUALIZATION PLATFORMS FOR MAXIMUM VISIBILITY AND MONITORING

The OmniVista 2500 VMM provides an adaptive, agnostic framework allowing support and interfaces with leading enterprise virtualization platforms from VMware, Microsoft and Citrix. It interfaces with virtualization and hypervisor applications such as VMware vCenter, Microsoft Hyper-V and Citrix XenServer without any additional software installation or configuration changes.

Using the OmniVista 2500 VMM Locator, the network administrator can discover, visualize and monitor the entire virtual network inventory.

The OmniVista 2500 VMM Locator constantly monitors, logs and reacts to virtualization events by keeping track of the virtual machine location in the physical network infrastructure through live and historical data tracking and logging.

AUTOMATED NETWORK INFRASTRUCTURE PROVISIONING FOR VIRTUAL MACHINE MOVEMENTS

The OmniVista 2500 VMM simplifies the automatic deployment of individual and unique UNPs. The product establishes UNPs for physical and virtual machine bindings and coordinates the distribution of them across the data center fabric. The OmniVista 2500 VMM also simplifies the virtual network profile definition and critical parameters settings, such as VLANs and quality of service (QoS) for applications and network security, ensuring continuous performance and delivery of services regardless of the physical location of the virtual machines.

The OmniVista 2500 VMM automates network infrastructure provisioning, eliminating configuration conflicts between virtual and physical networks, and increasing the IT efficiency of day-to-day operations.

TECHNICAL SPECIFICATIONS

OmniVista 2500 VMM runs as an optional, additional module on top of OmniVista 2500 NMS-Enterprise. OmniVista 2500 NMS solution is available as a virtual appliance running on certified operating systems with hypervisors and virtualization platforms. The OmniVista 2500 NMS client is HTML5 web-based.

OmniVista 2500 NMS client
- Minimum configuration
  - Microsoft Windows, Red Hat ES, SUSE LP (64 bit versions)
  - Intel Dual Core 2.4 GHz
  - 4 GB RAM
  - Certified web browsers
    - Internet Explorer 10+ for Windows PC client
    - Mozilla Firefox 26+ for Windows PC and Linux Clients
    - Google Chrome 26+ for Windows PC and Linux Clients

OmniVista 2500 NMS virtual appliance
- Certified operating systems (64-bit version only) with hypervisor support
  - Microsoft Windows Server 2012 Hyper-V
  - Microsoft Hyper-V Server 2012
- Red Hat Enterprise Server 6.5 or higher with VirtualBox v5.0.12 or higher installed
- SUSE Linux Professional v12 with VirtualBox v5.0.12 or higher installed
- Certified hypervisors
  - VMware ESXi 5.5 and 6.0
  - Microsoft Hyper-V 2012
  - VirtualBox v5.0.12 min
- Minimum requirements
  - Intel Pentium Quad Core 2.4 GHz
  - 16 GB RAM
  - 128 GB free disk space

OmniVista 2500 NMS virtual appliance
- Microsoft Windows 8.1 Pro & Enterprise Editions (with Hyper-V installed)
- Red Hat Enterprise Server 6.5 or higher with VirtualBox v5.0.12 or higher installed
- SUSE Linux Professional v12 with VirtualBox v5.0.12 or higher installed
- Certified hypervisors
  - VMware ESXi 5.5 and 6.0
  - Microsoft Hyper-V 2012
  - VirtualBox v5.0.12 min
- Minimum requirements
  - Intel Pentium Quad Core 2.4 GHz
  - 16 GB RAM
  - 128 GB free disk space
**OmniVista 2500 NMS 3rd-party systems interoperability**

- Virtual Machine Manager Hypervisor interoperability
- Microsoft Server 2012 Hyper-V and Hyper-V 2012
- VMware vCenter Standard Release 5.5 and 6.0
- Citrix XenServer Advanced and Enterprise Release 6.5

**Devices and software releases requirement for Universal Network Profile support**

- For OmniSwitch® 6900 (OS6900) and OmniSwitch 10K (OS10K): ~ AOS Release 7.3.4 R02 minimum for multi-tenancy configuration (Services Access Ports/ IEEE 802.1aq SPBM)
- For OmniSwitch 6860 (OS6860 & OS6860E): ~ AOS Release 8.3.1 R02 minimum
- For OmniSwitch 6850E (OS6850E):
- For OmniSwitch 9000E (OS9000E), OmniSwitch OS6855 (OS6855): ~ AOS Release 6.4.5 R02 minimum

**ORDERING INFORMATION**

OmniVista 2500 VMM runs as an optional, additional module on top of OmniVista 2500 NMS-Enterprise. At a minimum, customers deploying OV2500 VMM must have OmniVista 2500 NMS Starter Pack deployed. OmniVista 2500 VMM requires as a minimum, Release 4.2.1 to operate.

OV-VM-XX is a series of optional licenses covering Virtual Machine Manager as a supplemental capability for OmniVista 2500 NMS. This license enables features such as virtual machines inventory, location and state monitoring, plus all required network infrastructure provisioning for virtual machine moves. VMM licenses are available in various quantities and can be combined and cumulated to match any specific virtual machine count.
