

# Alcatel-Lucent Enterprise Networking solutions for video surveillance

Your video surveillance system is only as good as the network. High-bandwidth is fundamental to any video surveillance solution and security is critical in a converged environment where voice, video, and data traverse the same network infrastructure.

It is important to ensure that video surveillance networks are easy to deploy and maintain. Adding or swapping components must not affect the performance of the network or take it down.

Alcatel-Lucent Enterprise is committed to providing network solutions for video surveillance integrators that removes the complexity of network setup and maintenance, provides security system integrators with powerful management tools, and a streamlined deployment process for faster video surveillance equipment configuration – all at the lowest total cost of ownership (TCO).

## Performance

- Double the bandwidth with active redundant links and sub-second fail-over and less glitches
- Shortest Path Bridging (SPB) makes multicast simple, reliable and efficient
- Full range of switch platforms to support requirements from the edge to the data center, including hardened switches

## Mission Critical Network Infrastructure

## Cybersecurity

- Device identification and containment detects, isolates and blocks unauthorized devices on your video surveillance network
- Hardened OS – 3rd-party source code review and security features reduce cyberattack vulnerabilities and footprint
- Federal Certifications: JITC Certified, DoD Approved Products List (APL), FIPS-140-2 certified for encryption

## Protecting your network

## Simplicity and Automation

- Easy installation with Alcatel-Lucent OmniVista® Mobile Assistant
- Single pane of glass remote management, diagnostic tools, and automated response reduce truck rolls
- Detect and automatically provision new devices/cameras
- Automate network-attached devices inventory
- One-button switch lock-down eliminates open ports on VS switches
