Alcatel·Lucent Enterprise

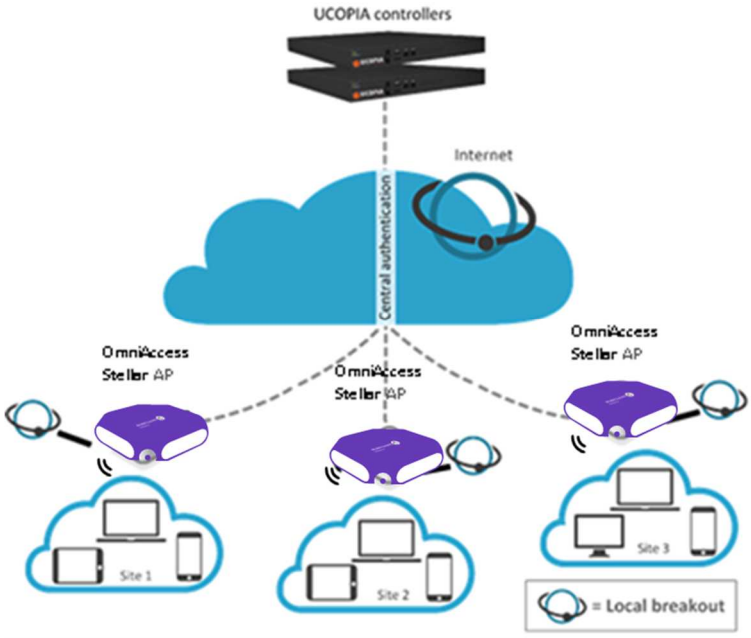

UCOPIA

Out Of band certified with
Alcatel-Lucent Enterprise OmniAccess Stellar Access Points

The goal of the Out-of-Band architecture is to build a centralized architecture over an existing OmniAccess Stellar Wi-Fi infrastructure, allowing centralized management of the main UCOPIA features: captive portals, authentication server, provisioning, user directory, user logs' traceability but without the need to centralize user traffic. The local Internet access of each site is used for the user traffic.

Integration Overview:

The on premise OmniAccess Stellar APs ensure portal redirection to the centralized UCOPIA controller, authentication process, and redirection of the user traffic's logs.
The central controller can be a high availability cluster (Advance product line).
The following schema presents the global Out-of-Band OmniAccess Stellar architecture

Technical Details:

Environment	
Partner	ALE
• UCOPIA controller version 5.1.13 or higher	• Stellar AP 3.0.3.22 or higher

Supported APIs/Protocols

- N/A

UCOPIA empowers organisations to **monetise their Wi-Fi network infrastructure**. We safely and securely connect visitors, guests, customers and audiences to any Wi-Fi network and we enable businesses, stadiums and cities to communicate with their users.
UCOPIA connects organizations to their mobile users. We **CONNECT** our clients to their users, make **hotspots MANAGEABLE**, make services easy to **DEPLOY**, **COLLECT** information on users, **ANALYSE** how people use the wireless network, and help our clients **MONETISE** their Wi-Fi and **ENGAGE** with their customers.

CAUTION: This validation provides customers with confidence that a partner's integration with an Alcatel-Lucent Enterprise on-premises platform is functionally sound and performs as designed. This can help customers reduce deployment risk, lower total cost of ownership, and improve the user experience related to the partner's integrated offering.
